# 1 Introduction

- Please read all the instructions carefully and completely before using the instrument.
- ▶ Read the safety precautions carefully.
- ▶ These instructions are part of the product. Keep them in a safe and easily accessible location.

### Symbols and Signs

The following symbols are used in this manual:

- Indicates a required action
- Describes the result of an action
- Indicates an item in a list
- [] Encloses menu items and soft keys

### Hotline

Phone: +49.40.67960.444 Fax: +49.40.67960.474 E-mail: technical.support@sartorius.com

# 2 Safety Information

# 2.1 Electrical Protective Class

### Warning!

This instrument has been built and tested in compliance with the safety regulations for measuring and control instrumentation for protective class I (protective grounding conductor) according to IEC 1010/EN 61010 or VDE 0411. The instrument was in perfect condition with regard to safety features when it left the factory. To maintain this condition and to ensure safe operation, the operator must follow the instructions and observe the warnings in this manual.

### 2.2 Intended Use

This instrument is only intended for use in weighing and metering systems, and is especially well-suited for tank and container scales, weigh bridges, platform weighers, crane weighers, dispensing systems and as a weighing indicator in intelligent control systems. Product operation, commissioning and maintenance must be performed by trained and qualified personnel who are aware of and able to deal with the related hazards and take suitable measures for self-protection.

The instrument reflects the state of the art. No warranty is given that the product is free of faults, especially not in conjunction with third-party software and hardware components required for operation.

The manufacturer does not accept any liability for damage caused by other system components or due to incorrect use of the product. The use of this product signifies recognition of the stipulations listed above.

### 2.3 Initial Inspection

Check the contents of the consignment for completeness. Check the contents visually to determine whether any damage has occurred during transport. If there are grounds for rejection of the goods, a claim must be filed with the carrier immediately. The Sartorius Intec sales or service organization must also be notified.

# 2.4 Before Commissioning

### Visual inspection!

Before commissioning as well as after storage or transport, inspect the device visually for signs of mechanical damage.

#### 2.4.1 Installation

Design	Protection class	Installation
Control cabinet housing	IP 65, back IP 20	Control Panel Cut-Out

To ensure proper cooling of the instrument, make sure air circulation around the instrument is not blocked. Avoid exposing the instrument to excessive heat; e.g., from direct sunlight. Ambient conditions must be taken into account at all times.

With outdoor mounting, make sure that adequate weather protection is provided (for temperatures, see Chapter 12.4.1).

### 2.4.2 Opening the Instrument

	High Voltage! Working on the instrument while it is switched on may have life-threatening consequences.
🛆 Danger	Disconnect the instrument from the supply voltage. When removing covers or parts using tools, live parts or terminals may be exposed.
	Please note that capacitors in the instrument may still be charged even after disconnecting the device from all voltage sources.

This instrument contains electrostatically sensitive components. For this reason, an equipotential bonding conductor must be connected when working on the open instrument (antistatic protection).

### 2.4.3 Mains Connection and Protective Grounding Conductor for PR 5500

### 2.4.3.1 Version 230 V AC

#### Mains connection

Safe interruption of both supply voltage conductors must be provided for, either by disconnecting the power connector or using a separate switch.

The instrument is protected via two fuses (see Chapter 12.3.4) on the back of the device (primary side).

The instrument is equipped with a wide range power supply and covers AC systems with a frequency of 50 Hz/60 Hz and a voltage range of 100 V AC to 240 V AC  $\pm 10\%/-15\%$  automatically (without manual selection).

The power supply is protected against short circuits and overloads, and disconnects automatically in case of a fault.

If the electrical protection has triggered:

- Disconnect the device from all power sources and wait at least 1 minute.
- Determine and eliminate the cause of the error.
- Reconnect the device to the supply voltage.

#### Protective grounding conductor

The instrument must be connected to a protective ground via a protective grounding conductor (PE) in the power connector.

The power cable contains a protective grounding conductor which must not be interrupted inside or outside the device. The protective grounding conductor is connected to the back of the housing inside the instrument.

### 2.4.3.2 Version 24 V DC

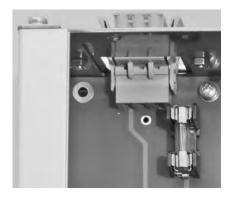

#### Mains connection

This version is designed for 24 V direct current. The supply is established via three spring clamp terminals (+ PE -). The instrument is protected against incorrect polarity.

#### Protective grounding conductor

The protective grounding must be connected to the central terminal (PE).

### Fuse

The instrument is protected in the + line via a fuse (see Chapter 12.3.5) inside the device (primary side).

## 2.5 **RF Interference Suppression**

The device is intended for use in the industrial sector and can cause RF interference if used in residential areas (see Chapter 12.4.3). In this case, the operator may be required to put suitable countermeasures in place.

### 2.6 Failure and Excessive Stress

If there is any reason to assume that safe operation of the instrument is no longer ensured, shut it down and make sure it cannot be used. Safe operation is no longer ensured if any of the following is true:

- The instrument is physically damaged.
- The instrument does not function.
- The instrument has been subjected to stresses beyond the tolerance limits (e.g., during storage or transport).

### 2.7 Important Note

Make sure that the construction of the instrument is not altered to the detriment of safety. In particular, leakage paths, air gaps (of live parts) and insulating layers must not be reduced. Sartorius Intec cannot be held responsible for personal injury or property damage caused by an instrument repaired incorrectly by an operator or installer.

### 2.8 Repairs and Maintenance

Repairs are subject to inspection and must be carried out at Sartorius Intec. In case of defect or malfunction, please contact your local Sartorius Intec dealer or service center for repair. When returning the instrument for repair, please include a precise and complete description of the problem.

Maintenance work must be carried out only by a trained technician aware of the involved hazards, whereby the relevant precautions must be taken in account.

### 2.8.1 Static Sensitive Components

This instrument contains electro-statically sensitive components. Therefore, potential equalization must be provided when working on the device (antistatic protection).

### 2.8.2 Replacing Fuses

Warning!

The use of repaired fuses and bypassing the fuse holder is prohibited. Only the fuses specified in Chapter 12.3 are allowed.

# 3 **Process Controller**

### 3.1 General Information

This instrument is equipped with a TFT color display, and a function/alphanumeric keypad. With the corresponding application, this device is a powerful system for managing/documenting weighing and dosing processes. It combines the functions of a user-friendly interface as well as a weighing and dosing instrument, PLC and interfaces.

The instrument is programmable according to the IEC 61131-3 standard (requires the PR 1750/60 development tool accessory).

### 3.2 Overview of the Instrument

- Accuracy 10.000 d at 0,5  $\mu$ V/d for the weighing electronics
- High-speed conversion with response times from 5 msec
- Weight display with status and weight unit on a TFT color display
- Housing for installation in a control cabinet. Protection type front IP 65, else IP 20
- Integrated LAN connection (10/100 Mbps) for data transmission
- USB 2.0 connection (Type A, i = 200 mA), integrated for printer, USB stick, PC keyboard, barcode scanner, external splitter (hub)
- SD card slot (incl. SD card)
- Integrated RS-232 interface, e.g. for connecting a PC, printer or remote display
- Can be expanded using the following plug-in cards:
  - 2x RS-485 interface card PR 5500/04
  - Analog E/A interface card PR 5500/07
  - Weighing electronics board PR 5500/10 (W1)
  - Digital E/A interface card PR 5500/12
  - Digital E/A interface card PR 5500/13
  - Digital E/A interface card PR 5500/17
  - 2x RS-232 interface card PR 5500/32
  - Fieldbus cards PR 1721/6x
- Wide range power supply for 100 to 240 V AC, protection class I (protective grounding conductor)
- Version for 24 V direct current
- Plug-in connections on the rear side of the device for load cells, inputs/outputs, LAN connection, serial interfaces
- Alternative operation using PC tool (Browser/VNC)
- Calibration using weights, by entering mV/V values, or directly, using load cell data (Smart Calibration)
- Software configuration of the interface cards, e.g. for remote display or printer
- Analog test for the weighing electronics
- Overwrite protection:
  - via a max. of 3 CAL switches (two on the main board and one on the weighing electronics board)
  - via software

### **Communication Protocols**

For the internal RS-232:

- Remote display protocol
- Printer
- ModBus protocol
- xBPI protocol
- SBI protocol
- EW-Com protocol

For the internal LAN interface:

- ModBus-TCP
- Ethernet-TCP/IP
- OPC

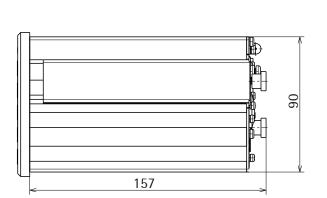

Fieldbus slave (accessories):

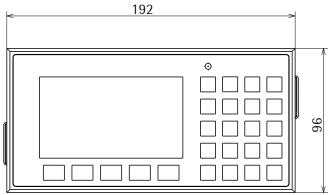

- PR 1721/61 ProfiBus DP
- PR 1721/64 DeviceNet
- PR 1721/65 CC Link
- PR 1721/66 ProfiNet I/0
- PR 1721/67 EtherNet IP

# 3.3 Housing

### 3.3.1 Housing dimensions

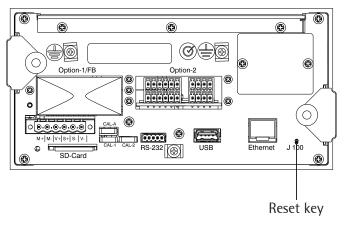

The keypad and the display form one unit with the front. A rectangular cut-out is required for the installation. Cable connections are made at the back of the housing.

Side view

### **Back view**

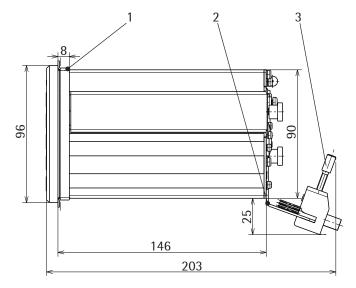

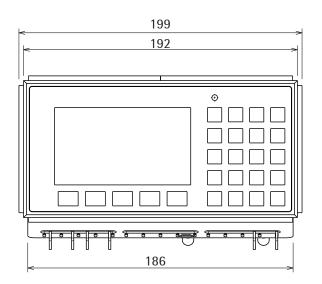

All dimensions in mm.

# 3.3.2 Housing Dimensions with Strain Relief and Reinforcing frame

The dimensions with the following options must be observed for installation:

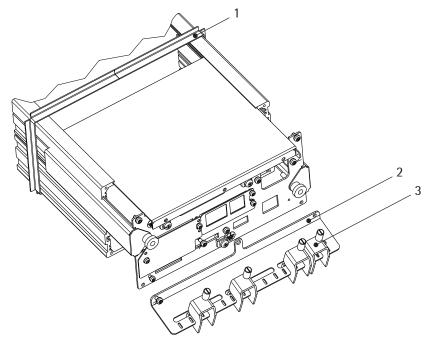

Pos.	Designation
1	Reinforcing frame
2	Screen clamping rail
3	Cable clamps

Side view

Front view

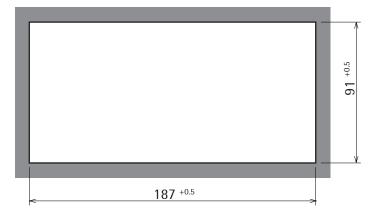

Back view

Note All dimensions in mm.

# 3.3.3 Control Panel Cut-Out

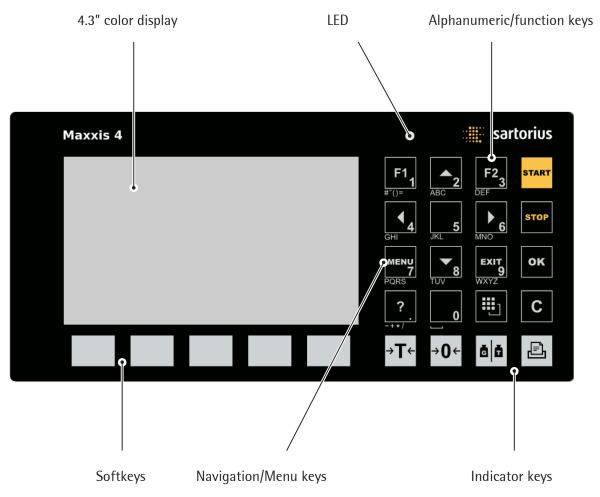

The control panel cut-out must be made before installing the unit.

# 3.4 Display and Control Panel

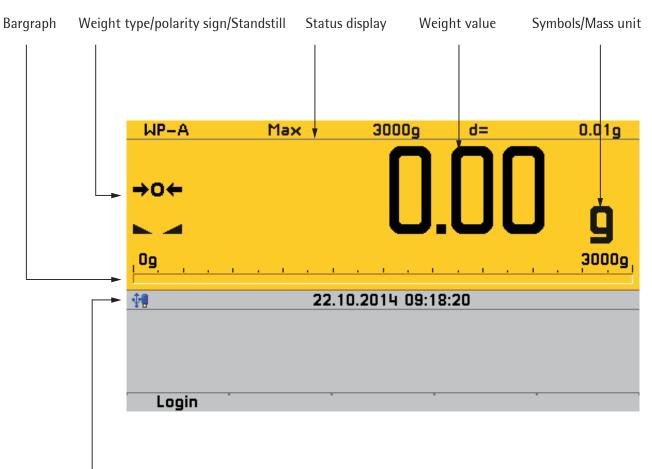

### 3.4.1 Overview

### 3.4.2 Display

The TFT display shows weight values of up to 7 digits with a decimal point and a plus or minus sign. Available weight units are t, kg, g, mg, lb and oz.

The current weight value is displayed under the weight display as a bar graph in relation to the maximum capacity. When the maximum capacity (Max) reaches 100 %, the bar graph is located on the right.

Function keys					
<b>F1</b> Assign with a defined function (Operating parameters menu).		START	Starts an application-specific function.		
F2	<b>2</b> Assign with a defined function (Operating parameters menu).		STOP	Stops an application-specific function.	
?	Displays the corresponding Help window.				
LED					
Operatin	ng state	Color	LED status		
Normal o	operation		turned off		
Power failure <5 seconds red		flashing slowly	After 5 seconds, the unit will continue normally.		
Power failure >5 seconds red		red	flashing quickly	The device performs a data backup. Is then the power on, the unit returns to the normal operation (LED turned off).	
After bac existing	ckup the power failure is still		turned off	The unit turns off.	
Power voltage is on			turned off	The device performs a warm start see Chapter 5.1.3.	

Alphanume	ric keypad					
				Toggle k	key	
F1 #"()=	<b>2</b> ABC	F2 3	START			ssing this will toggle between the following ut modes:
				≞ ◆ ▶	-	Cursor
<b>4</b>	5	6	STOP	™ ABC	-	Uppercase letters
GHI .	JKL	MNO		🖷 abc	-	Lowercase letters
MENU 7 PQRS ?	<b>8</b> TUV <b>0</b>	EXIT 9 WXYZ	ок	₩ IME	-	Pinyin When Chinese was selected or set under [Operating parameters] - [Input method]. Hepburn When Japanese was selected or set under [Operating parameters] - [Input method].
				₩ 1 <b>23</b>	-	Numbers
				≞∢) ≞≞ unit	-	Units Double-click on the toggle key opens a small selection window.
				mg kg t Ib oz		Select the unit with cursor keys $\blacktriangle/\checkmark$ and confirm with <b>OK</b> .
				Input wi	itho	ut character table
				ABC 2	e.g. wil tim	ssing this once will display the first character, 'A' in the cursor position. Pressing it twice display 'B' in the cursor position and three- es will display 'C.' iting approx. 2 seconds will complete the
						racter entry.
						nly numeric values are required for input, ers are not enabled.
				С		a can delete the character to the left of the sor by pressing the Delete key ${f C}$ during entry.
					Del	merical value input (e.g. weight value): ete the content of the input field by pressing Delete key <b>C</b> .

Double-clicking the key displays the character table.
The toggle function is turned off.
<ul> <li>Procedure</li> <li>Select the desired character with the cursor.</li> <li>The selected character is shown magnified in the field at the top right.</li> <li>Press the OK key to enter the character in the input field.</li> <li>Another double-click on the toggle key and other characters can be input as described</li> </ul>

# Input field

Enter user name and password User name Password	pimbe@ #########	Left of the input field is displayed whether numeric and/or alphabetical characters can be entered.
enter user name and password User name Password	₩ABC ₩ABC *******	— The respective setting is displayed.
Keyboard shortcuts		
<b>STOP + EXIT</b> Trigger a cold start, so	ee also Chapter 5.19.3.	

### 3.4.3.2 Operation Using Soft Keys

The functions of the five soft keys below the graphic display are indicated in the bottommost text line of the display. In the descriptions of operating sequences which entail the use of soft keys, the soft key function to be selected is shown in square brackets; the soft key symbol is not displayed, e.g. [Save].

Standard Save

### 3.4.3.3 Selection using the Navigation Keys

### Menu

You can navigate menus using the cursor keys, the **OK** key and the **EXIT** key.

#### Parameters

Individual parameters are selected using the  $\mathbf{v}/\mathbf{A}$  keys.

The required values/texts are entered via the alphanumeric keys.

Checkmarks are set  $\blacksquare$  using the **OK** key.

If the list of parameters is long, a vertical bar graph on the left (black/gray) shows which part of the list is displayed.

Available selection lists are indicated by the following arrow  $\blacktriangleright$ .

The parameter is selected in the selection list via the **OK** key.

#### 3.4.3.4 PC Keys

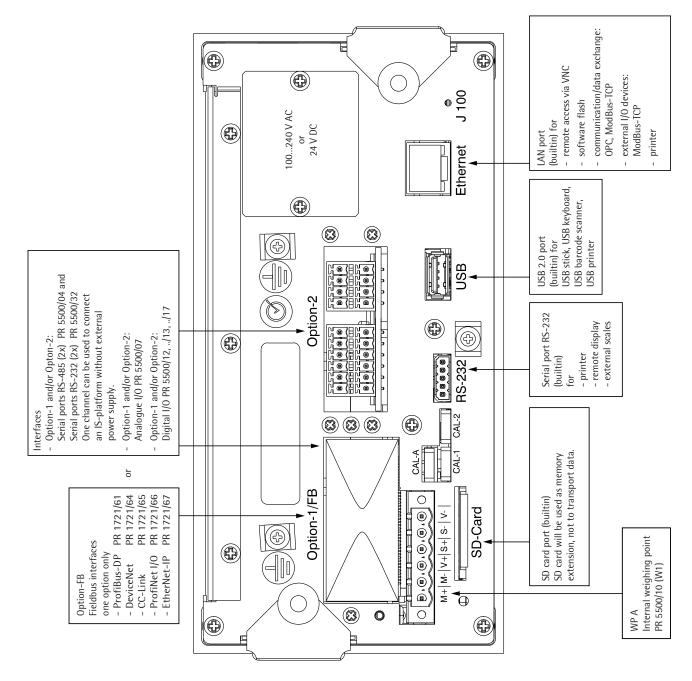

The device can also be operated via a PC keyboard. The corresponding key assignments can be viewed in the following table, see also Chapter 4.3.3.2.

PC keyboard	Front keypad
F1	F1
F2	F2
F3	?
F4	MENU
F5 to F9	Soft key 1 to 5
F10	<b>::</b> :
F11	START
F12	STOP
ESC	EXIT
Cursor keys: ↑, ↓, ←, →	▲, ▼, ◀, ►
ENTER	OK
Backspace	С
Numeric keypad	Alphanumeric keypad

### 3.4.4 Operation using the VNC Program

User interface, see Chapters 3.4.1, 3.4.2 and 3.4.3.1.

# 3.5 Overview of Connections

### **Device Model**

The marking (e.g. PR 5500-W1-L0-C21-B15-B27-H0-E5) of the device model (basic device + options) is located on a label on the back of the instrument.

# 4 Device Installation

# 4.1 General Information

Before starting work, please read Chapter 2 and follow all instructions.

Further procedures:

- Check the consignment: make sure that all components are present.
- Safety check: inspect all components for damage.
- ▶ Make sure that the on-site installation is correct and complete including cables, e.g. power cable fuse protection, load cells, junction box, data cables, console/cabinet, etc.
- ▶ If necessary, install the plug-in cards (device must be disconnected from all voltage sources).
- ► Follow all device installation instructions related to application, safety, ventilation, sealing and environmental influences.
- Connect the cable from the junction box or platform/load cell.
- ▶ If applicable: connect other data cables, power cables, etc.
- ► Connect the power cable.
- ► Check the installation.

# 4.2 Mechanical Preparation

Have all required parts, technical documents and tools at hand for installation.

- Measurement cables should be kept away from power equipment.
- Signal cables and measurement cables should be installed separately from electric power lines.
- It is recommended to lay measurement cables in separate cable conduits.
- Data cables should be crossed at right angles.
- ▶ For the control panel cutout for the device made e.g. in the control cabinet door; see Chapter 3.3.3.
- Install device.
- Secure the cable at the place of installation; e.g., using cable ties.
- Remove the insulation from the cable ends and keep the strands short.
- Connect the screen to device grounding terminal or screen clamping rail; see Chapter 4.2.1.1
- Connect the ground or equipotential bonding conductor to the device grounding terminal; see Chapter 4.2.1.2.

#### 4.2.1.1 Connecting the Screen to the Screen Clamping Rail

The screen must be connected to the screen clamping rail using delivered screen clamps as pictured below.

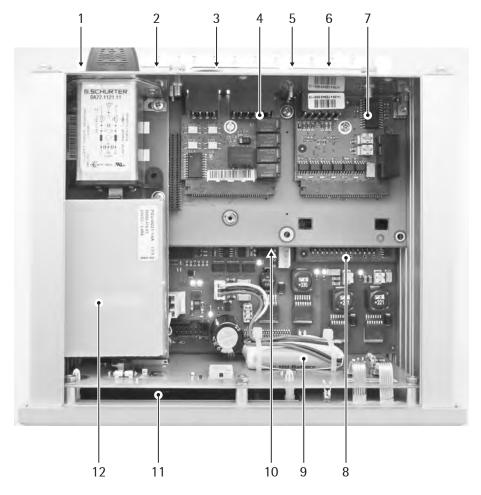

#### 4.2.1.2 Connecting the Equipotential Bonding Conductor

The equipotential bonding conductor (1) must be connected as pictured below.

# 4.3 Hardware Construction

# 4.3.1 Main Board

The following elements are located on the main board:

Pos.	Name	Pos.	Name
1	Reset key	7	Slot for fieldbus and option cards, Option-1/FB
2	Ethernet port, internal	8	Weighing electronics board W1
3	USB connection	9	Stand-by battery (for data recovery)
4	Slot for option cards, Option-2	10	Clock battery (see Chapter 9.1)
5	Connection for RS-232 interface, internal	11	Color-graphic display
6	SD card slot	12	Power adaptor

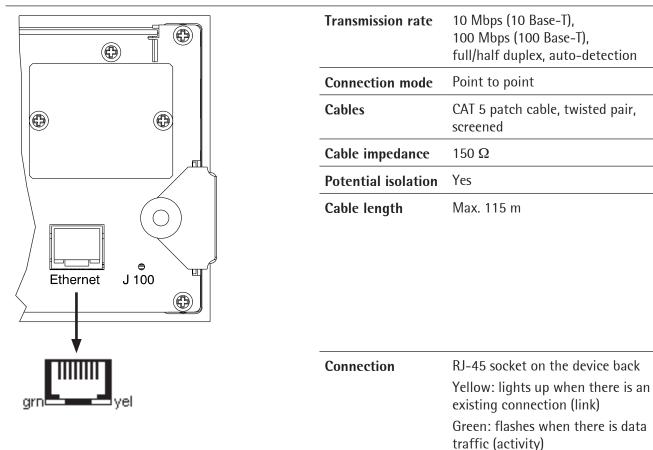

Note LED list see Chapter 13.4.

#### 4.3.2 Network Port

The device has an internal Ethernet port.

#### 4.3.2.1 Ethernet Port

The Ethernet port contains a powerful TCP/IP interface connection with transfer rates of 10 or 100 Mbps. Function tests can be made via the LEDs (green and yellow) in the RJ-45 socket.

4.3.2.2 Notebook/PC Connection

Connect	tion details		×
V2	VNC server:	172.24.20.57:1	OK
<u> </u>		Use host:display	Cancel
		e.g. vessel 2 (Display defaults to 0 if not given)	Options

Remote operation of the device from a notebook/PC is possible (install VNC software version 3.3.7\* on the notebook/PC).

For network address settings, see Chapter 5.6.1.

\* Sartorius Intec guarantees the functionality only if this version is used.

#### 4.3.3 USB Connection

The USB connection is located on the back of the device.

	Туре	USB 2.0, Type A
Concernance of the second seco	Max. current	i <sub>max</sub> = 200 mA
USB	Possible Connection Devices	<ul> <li>USB stick</li> <li>External keyboard</li> <li>Barcode reader</li> <li>Printer (non-GDI)</li> <li>External splitter (hub)</li> </ul>

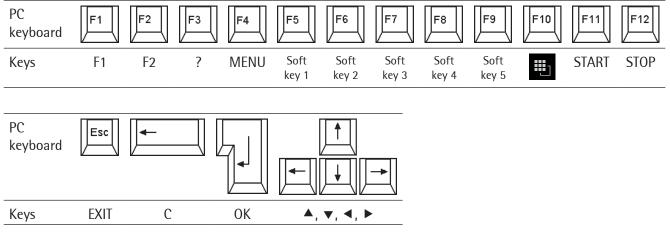

Data integrity cannot be guaranteed in the case of a power failure when using a USB stick via a splitter (HUB).

#### 4.3.3.1 USB Stick

All commercially-available USB sticks can be used.

#### 4.3.3.2 External PC Keyboard

The device has an alphanumeric keypad and a USB connection for an external PC keyboard on the back of the device. Both operating functions are equivalent and either one can be used.

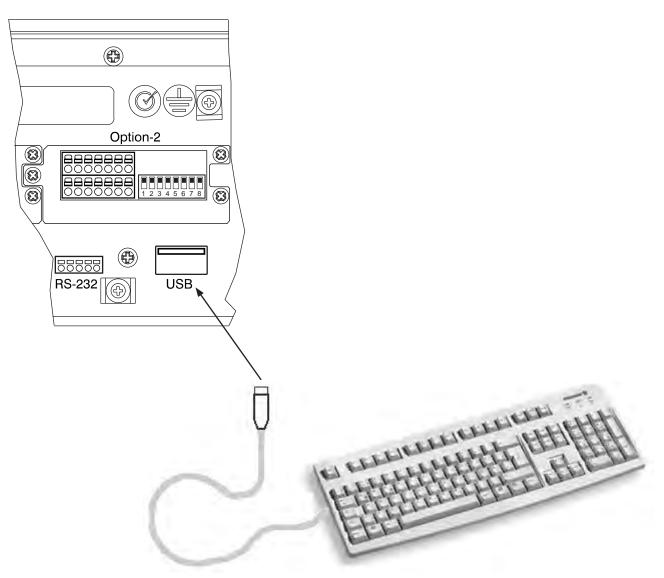

You can set the key assignment for the connected keyboard under [System Setup]-[Operating Parameters]-[USB keyboard layout]:

- [German QWERTZ]
- [French AZERTY]
- [Italian QWERTY]
- [Spanish QWERTY]
- [English QWERTY]
- [Russian QWERTY/йцукен]

Before connecting the keyboard, make sure: Current consumption i <200 mA. An electronic current limiting prevents overloads.

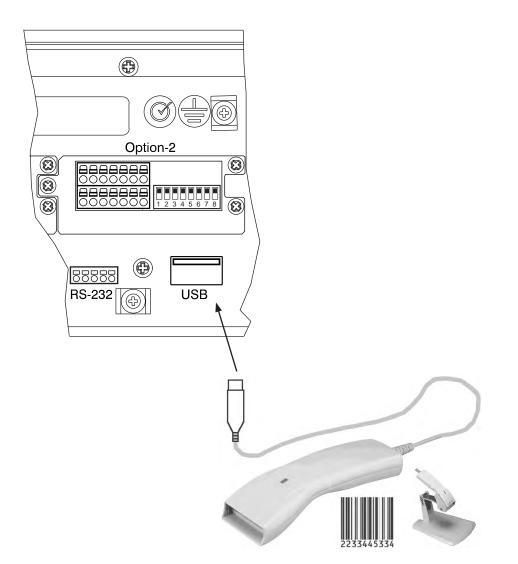

#### 4.3.3.3 **Barcode scanner**

A barcode scanner can be connected to the USB interface on the back of the device as an alternative to an external keyboard.

Before connecting the barcode scanner, make sure: current consumption i <200 mA. An electronic current limiting prevents overloads.

Barcode scanner settings are made by scanning the corresponding code (see manual). We recommend setting 3 redundant read processes to ensure secure read values. To confirm each read process via the key field, the automatic CR function of the scanner must be switched off.

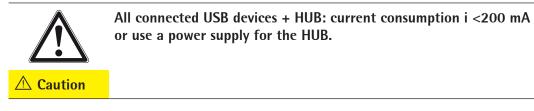

#### 4.3.3.4 Printer

The following USB printers can be used:

- YDP14IS-OCEUV
- EPSON TM-U220 und EPSON LQ-300K
- Line printer
- Printer with ESC/P2 control
- Printer with PCL5 control

#### 4.3.3.5 External HUB

All commercially-available HUBs can be used.

#### 4.3.4 SD Card Slot

The internal SD card slot is located on the back of the device. It comes with an appropriate SD card. The SD card is only used for storage; it is not used for data transfers.

Note	Only Sartorius Intec-supplied SD cards may be used. There is no warranty for third-party
	cards.

The following data are saved to the SD card:

- The backup directory for the configuration and database
- A copy of the current version of the BIOS, firmware and application
- A copy of the delivery version of the BIOS, firmware and application
- Manuals

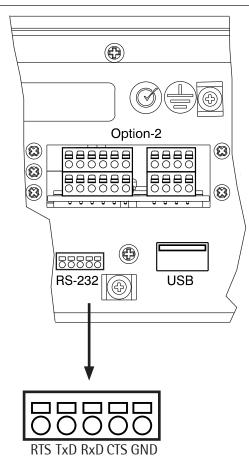

You also have the option of saving application data.

	The SD card is a fixed component of the device.
	- The SD card may only be removed together with the SIL chip during servicing (replacing a defective device, see Chapter 13.7).
<b>A</b> Caution	- The SD card may not be used for data transfers.
	- The SD card may not be used in Notebook/PC.
TI 65 II	

The SD card is protected by a battery in case of a power failure, i.e. the current process running (e.g. reading data) is carried out and completed.

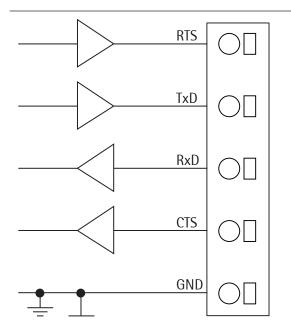

## 4.3.5 RS-232 Interface (built-in)

The device is equipped with an integrated RS-232 interface. This interface is configurable, and can be used, for example, for data transmission to a remote display or printer.

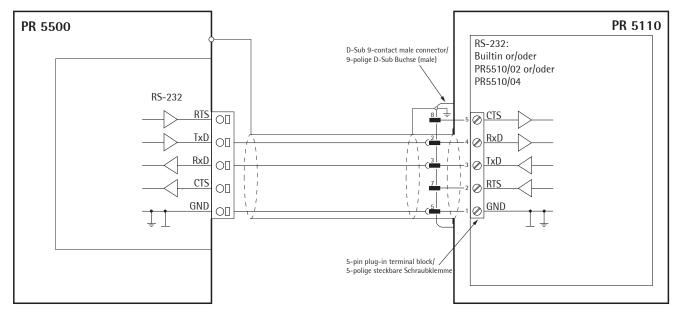

Connection	Terminal, 5-pin	
Number of channels	1	
Туре	RS-232, full duplex	
Transmission rate	300 to 115k2 Bit/sec	
Parity	None, odd, even	
Data bits	7/8 bit	
Input signal level	Logic 1 (high) - 3 to - 15 V Logic 0 (low) + 3 to + 15 V	
Output signal level	Logic 1 (high) - 5 V to - 15 V Logic 0 (low) + 5 V to + 15 V	

Number of signals	Input: Rx, CTS Output: Tx, RTS
Potential isolation	none
Cable gauge	max. 1.5 mm <sup>2</sup>
Cable length	max. 15 m
Cable type	Twisted pair, screened (e.g. LifYCY 3x2x0.20), 1 pair of wires for ground (GND).

### 4.3.5.1 Connecting a PR 5110 Remote Display via RS-232

The remote display can be connected via the built-in RS-232 interface.

#### PR 5500 Configuration

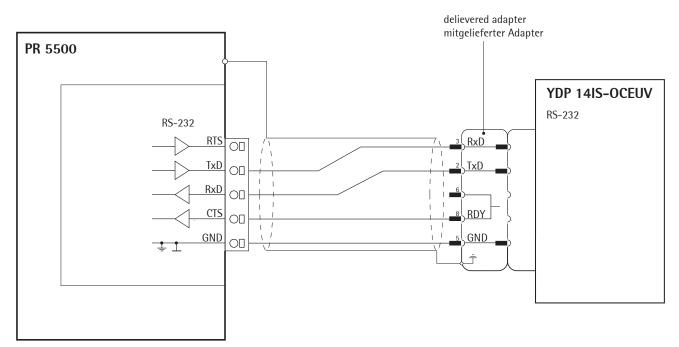

[System setup] – [Connected devices] – [Remote display] – [Interface] – [Built-in RS-232]

#### PR 5110 Configuration

- عنه) P ID LI nE r5232 (مار) - P I2 - LofiEn - off
- 😇 oP I3 SEndNodE SEnd
- 👾 op 14 BEI GHE Follob
- (1) OP IS UPREY SELECE

#### 4.3.5.2 Connecting a YDP14IS Ticket Printer via RS-232

The YDP14IS-OCEUV ticket printer can be connected via the built-in RS-232 interface.

#### PR 5500 Configuration

[System setup]-[Connected devices]-[Printer]-[Interface]-[Built-in RS-232]:

- [Protocol] to 'RTS/CTS'
- [Baud Rate] to '9600'
- [Data Bits] to '8'
- [Parity] to 'none'
- [Stop Bits] to '1'
- [Printer Type] to [Unchanged]

#### 4.3.5.3 Connecting Additional Printers

The following serial printers can also be used:

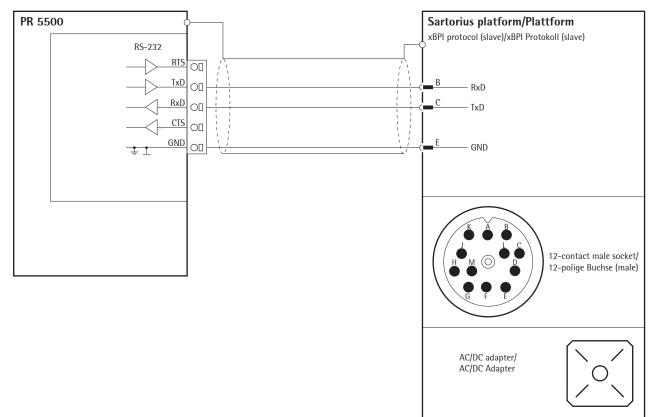

- Epson TM-U295
- Printer with ESC/P2 protocol

#### **Printer Configuration**

The printer must be set to Line Mode (the factory setting is Page Mode). Press the FEED button to change modes; please refer to the operating instructions delivered with the printer.

#### 4.3.5.4 Connecting an IS Platform via RS-232

A platform using an xBPI or SBI protocol can be connected via the built-in RS-232 interface.

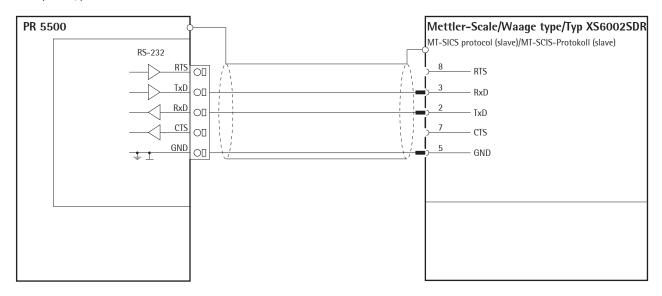

#### Configuration

[System setup] – [Weighing points] – [Weighing point X]: [xBPI scale] [Interface]: [Built-in RS-232]

#### 4.3.5.5 Connecting a Mettler-Scale via RS-232

A Mettler-Scale using MT-SICS protocol can be connected via the built-in RS-232 interface. Example: Type XS6002SDR

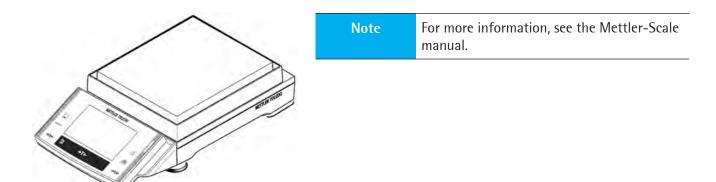

#### **Configuration PR 5500**

[System setup] – [Weighing points] – [Weighing point X]: [Mettler-Scale] [Interface]: [Built-in RS-232]

#### Parameter settings Mettler-Scale

see Chapter 5.17.2.

# 4.4 Accessories

### 4.4.1 PR 5500/04 2x RS-485 Interface

The plug-in card contains two channels. One channel can be used for connecting an IS platform without an external power supply.

Note	Either the internal Weighingpoint or an IS platform without external power supply can be
	used.

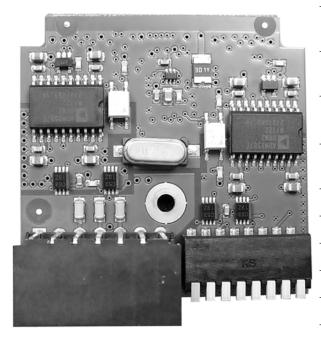

The RS-485 interface can be selected and configured in the Setup menu.

Using the RS-485 interface is compulsory with a multi-point connection (Tristate status).

The RS-485 interface can also be used as a point-to-point connection.

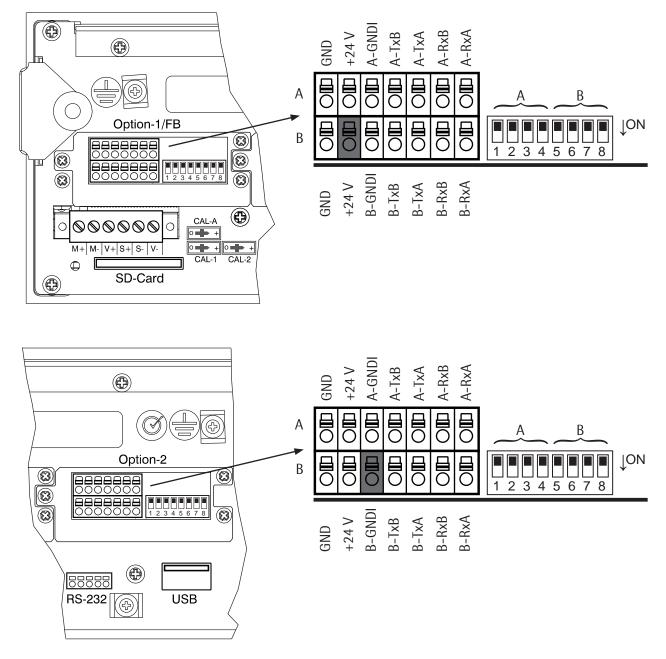

The card is inserted in the Option 1/FB and/or Option 2 slot.

A max. of 2 PR 5500/04 cards can be installed!

Internal Connection	Contact strip	
Number of channels	2	
Туре	RS-485, full duplex (4-wire) RS-485, half duplex (2-wire)	
For external power supply	U= 24 V, 3 W (briefly up to 6 W)	
Transmission rate	300 to 115 K2 Bit/sec	
Signals	TxA, RxA, TxB, RxB	
Potential isolation	Yes	
Cable gauge	max. 1.5 mm <sup>2</sup>	
Cable length	max. 1000 m	
Cable type	Twisted pair, screened (e.g. LifYCY 3x2x0.20), 1 pair of wires for ground (GND).	
External connection	2x terminal, 7-pin	
Dimensions (LxWxH)	50x45x18 mm	
Weight	Approx. 35 g	

#### PR 5500/04 2x RS-485 Interface

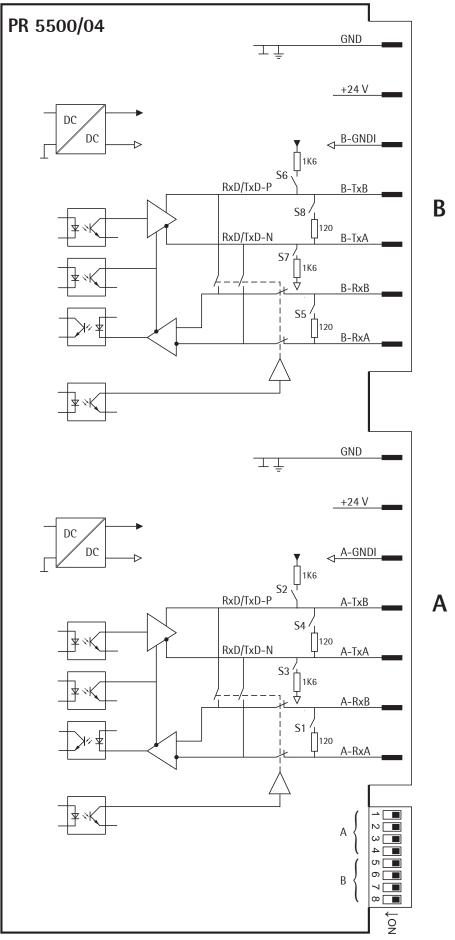

#### Coding of Option-1/Option-2

- ▶ Terminal block: Insert the coding pin into the slot of the position marked in gray.
- ▶ Terminal: Remove (pinch off) the corresponding coding ridge.

Note	The terminal coding is described in Chapter 13.5.

 - 0P 15 - 4PFE4 - 5ELECE

### 4.4.1.6 Connecting the IS Platform via RS-485 (2-wire)

A platform using an xBPI or SBI protocol can be connected via the RS-485 interface.

Note Only one platform can be supplied with power from the PR 5500 and the weighing electronics board PR 5500/10 must not be connected.

#### Example

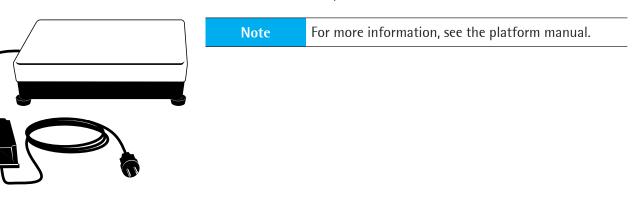

#### Switch settings

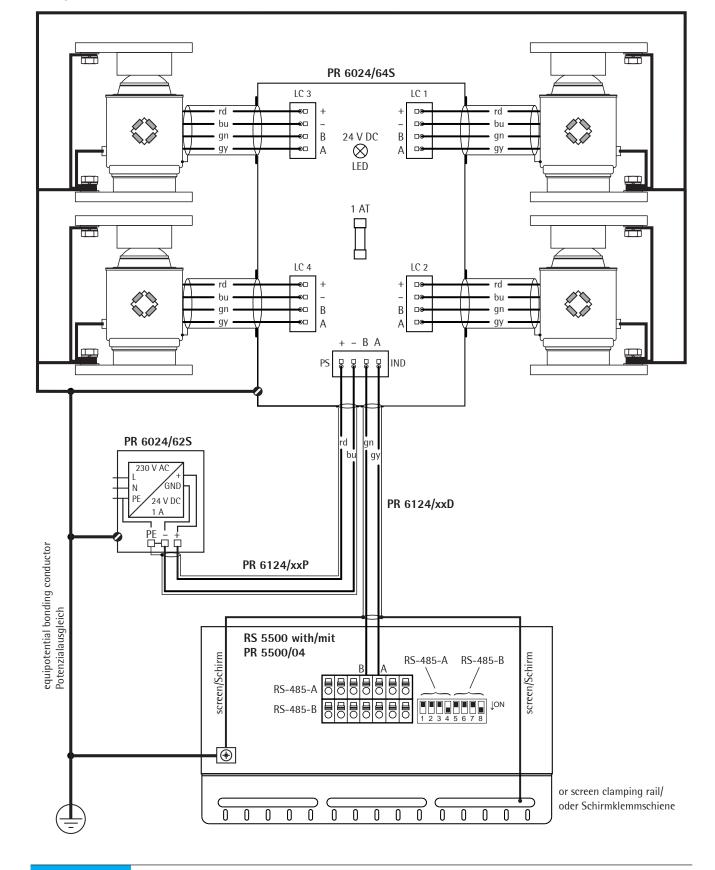

0N: S2, S3, S4 0FF: S1

#### Configuration

[System Setup] – [Weighing points] – [Weighing point A]: [xBPI scale]

[Interface]: [Option-x RS-485-A]

4.4.1.7 Connecting 4 Load Cells PR 6204 ,Pendeo<sup>®</sup> Process'/PR 6224 ,Pendeo<sup>®</sup> Truck' via RS-485 Example

Note

For more information, see the load cell and junction box manuals.

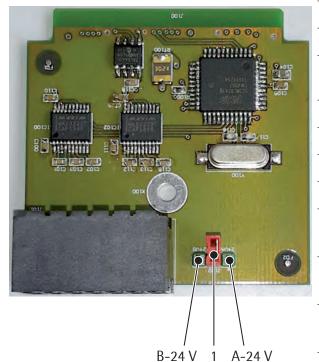

#### 4.4.2 PR 5500/32 2x RS-232 Interface

The plug-in card contains two channels. One channel can be used for connecting **one** IS platform without an external power supply. The jumper (1) must then be plugged onto A-24 V or B-24V. When an IS platform is connected without an external power supply, no analog weighing electronics board or no load cells may be installed in the device.

The RS-232 interface can be selected and configured in the Setup menu.

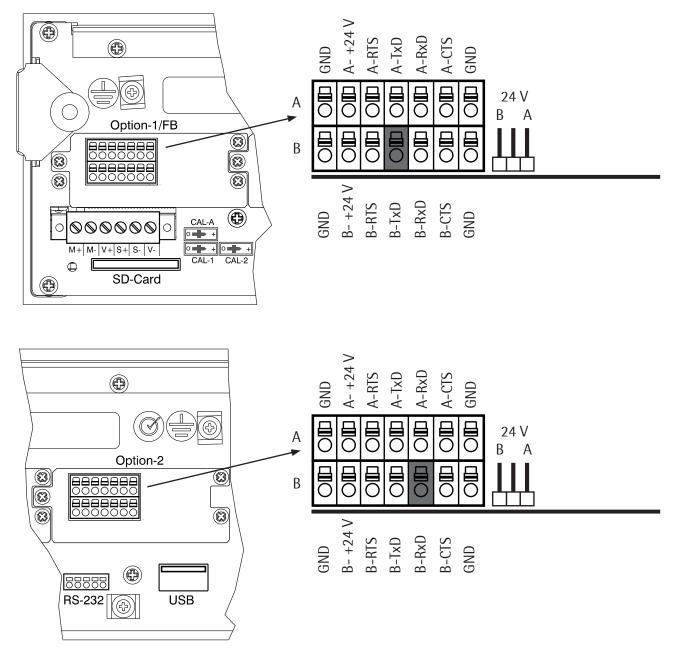

The card is inserted in the Option 1 and/or Option 2 slot.

A max. of 2 PR 5500/32 cards can be installed!

Intern. connection	Contact strip		
Extern. connection	2x terminal, 7-pin		
Number of channels	2

#### 4.4.4 PR 5500/10 Weighing Electronics Board

#### 4.4.4.1 Specifications

The weighing electronics board is inserted in the WP A slot.

The CAL switch A (1) are located on the board.

Adjustment data and parameters are saved to the EAROM (non-volatile memory) of the weighing electronics board.

Weight

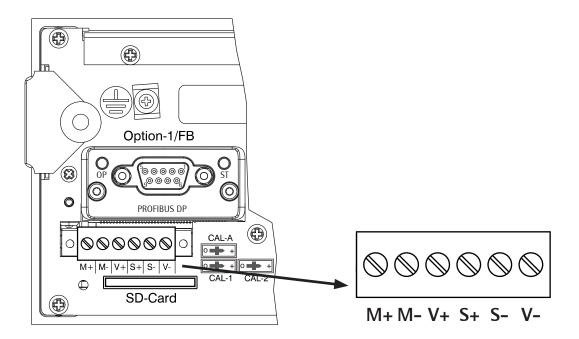

approx. 60 g

#### **General Information** 4.4.4.2

There is one connection on the back of the housing for analog load cells or analog platforms (e.g. CAPP series) depending on the model. The supply voltage is protected against short circuit and overload.

Do not shorten the load cell cable. Connect the prepared cable end and roll up the remaining cable.

Terminal block Connection		nnection	Description

gy	=	Gray					

### **4.4.4.5** Connecting up to 8 Load Cells (650 $\Omega$ ) using a 6-Wire Connecting Cable Connections are made via junction box PR 6130/.. using connecting cable PR 6135.

The cable colors shown above are valid for Sartorius Intec load cells and connecting cable PR 6135.

Color code:

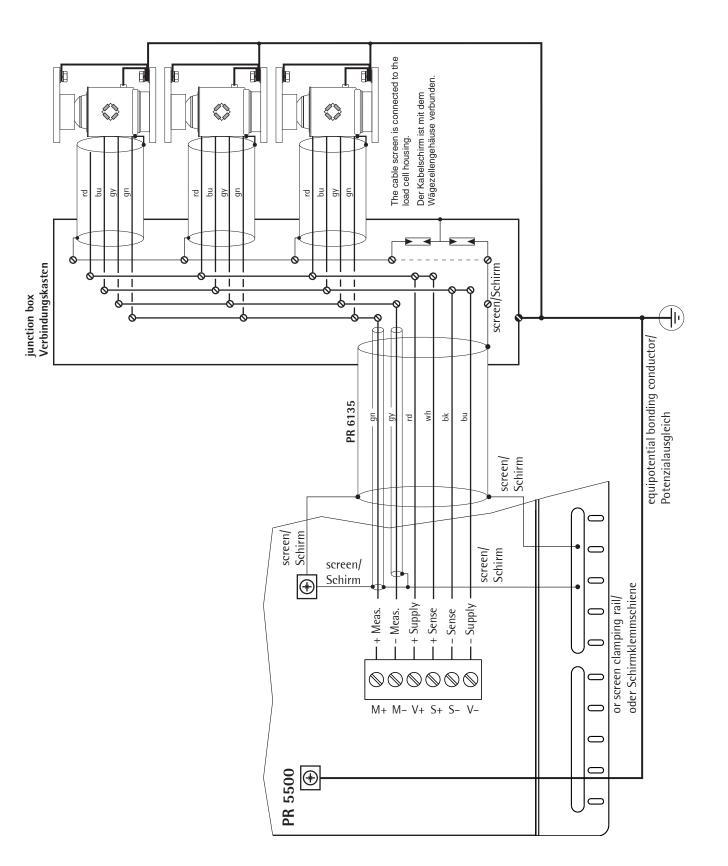

bk	=	Black	rd	=	Red
 bu	=	Blue	wh	=	White
gn	=	Green	ye	=	Yellow
gy	=	Gray			

#### Recommendation

- Install cable in steel pipe connected to a ground potential.
- The distance between the measuring cables and the power cables should be at least 1 m.

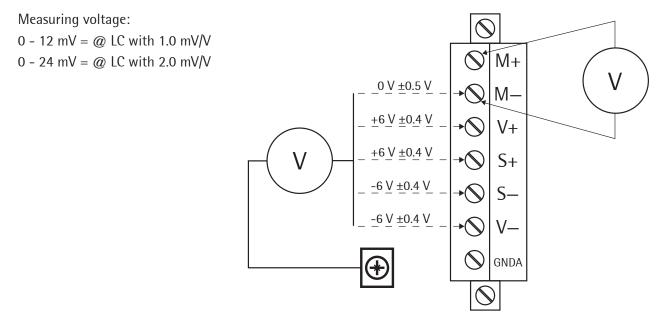

#### Load cell supply circuit

- Load resistance of load cell circuit  $\ge$ 75  $\Omega$ , e.g. 8 load cells of 650  $\Omega$  each
- Supply voltage is 12 V DC, for further data, see Chapter 12.3.

#### 4.4.4.6 Testing the Measuring Circuit

You can perform a simple test on connected load cells using a multimeter (The internal load cell power supply does not apply to load cells supplied externally.):

### 4.4.4.7 Connecting Load Cells to an External Supply

When the total resistance of the load cells is  $\leq$ 75  $\Omega$  (e.g. more than 4 load cells with 350  $\Omega$ ), an external load cell supply is required. In this case, the internal supply is replaced by a potential-free external supply. The center of the external supply voltage (0 ext. supply) should be connected to the housing to ensure that the voltage reacts symmetrically to 0. The internal supply is not connected!

#### 4.4.4.8 Connecting Weighing Platforms (CAP)

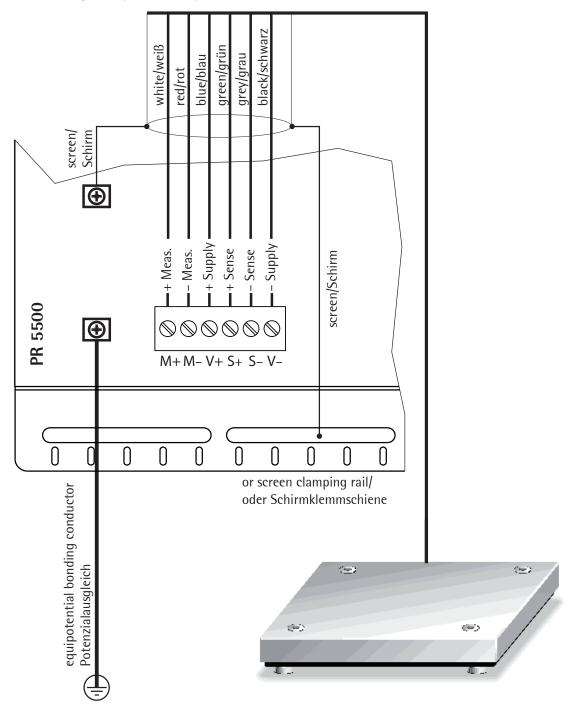

Up to 2 Combics analog platforms (CAP series) can be connected to the internal weighing electronics connections depending on the model.

The cable colors shown above are valid for a CAPP4 500 x 400 and a CAPP1 320 x 420, for example.

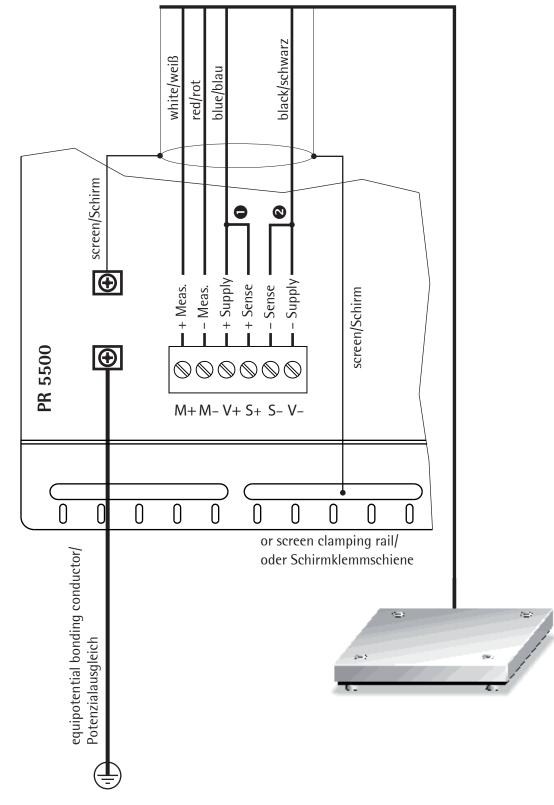

The assignments of cable colors are listed in the platform operating instructions.

The following example shows a platform with a 6-wire connection:

Cable screens should be connected to the device earthing terminals or screen clamping rail.

The following example shows a platform with a 4-wire connection:

Cable screens should be connected to the device earthing terminals or screen clamping rail.

The following links should be set directly on the terminal block for platforms with a 4-wire connection:

- between + Supply (+V) and + Sense (+S)
- ❷ between Supply (-V) and Sense (-S)

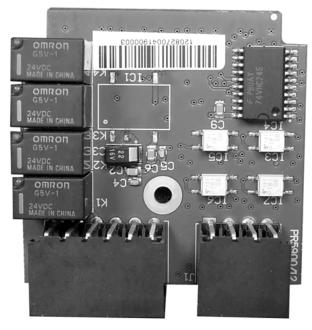

# 4.4.5 PR 5500/12 Digital Inputs and Outputs

The plug-in card has 4 passive opto-decoupled inputs for process control.

The plug-in card also has 4 digital outputs with potential-free two-way contacts for process control.

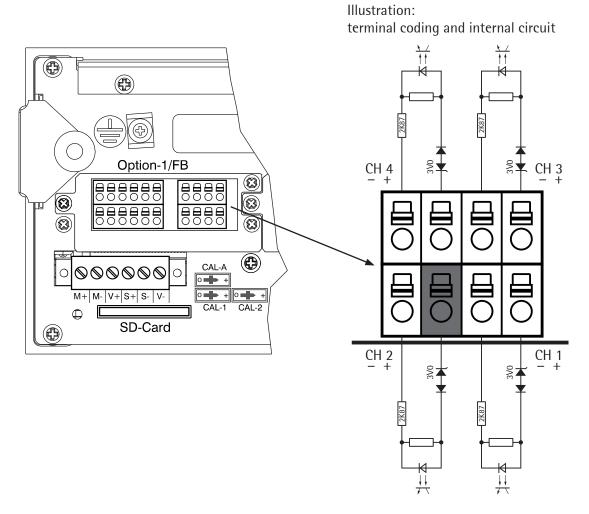

The card is inserted in the Option 1/FB and/or Option 2 slot.

A max. of 2 PR 5500/12 plug-in cards can be installed!

Internal connection	Contact strip
Digital inputs/ outputs	4 (CH1, CH2, CH3, CH4)
Input voltage	Logic 0: 0 to 5 V DC or open Logic 1: 10 to 28 V DC Passive, external power supply required
Input current	<7 mA @ 24 V <3 mA @ 12 V Protected against incorrect polarity
Input frequency	max. 200 Hz (50% ratio)
Output	Two-way contact Max. switching voltage 30 V DC/24 V AC Max. switching current: 1 A
Switching frequency	max. 0.5 Hz
Potential isolation	Inputs: Yes, via optocoupler Outputs: Free relay two-way contact
External connection	2x terminal, 6-pin 2x terminal, 4-pin Wire gauge max. 1.5 mm²
Cables	Screened Connect the cable screen to the device.
Cable length	max. 50 m
Dimens. (LxWxH)	60x106x22 mm
Weight	70 g

### 4.4.5.1 Digital Inputs (PR 5500/12)

### Coding of Option-1

- ▶ Terminal block: Insert the coding pin into the slot of the position marked in gray.
- ▶ Terminal: Remove (pinch off) the corresponding coding ridge.

Note The terminal coding is described in Chapter 13.5.

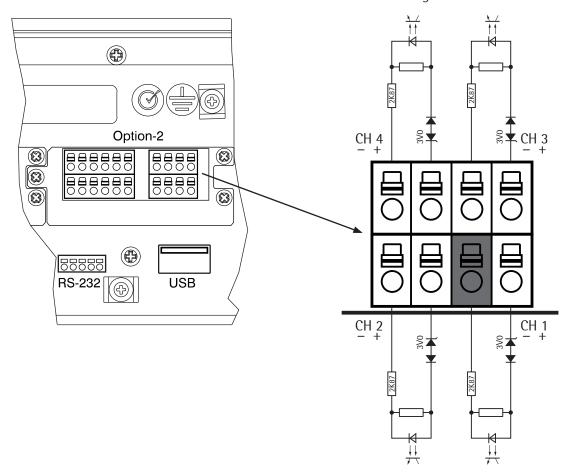

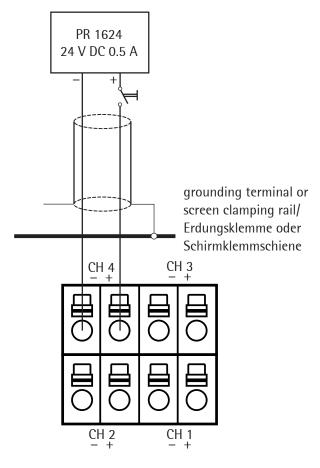

Illustration: terminal coding and internal circuit

### Coding of Option-2

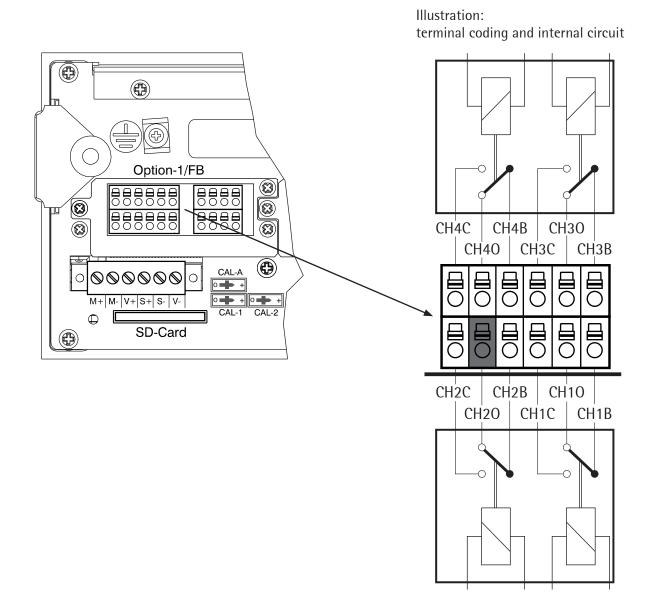

- ▶ Terminal block: Insert the coding pin into the slot of the position marked in gray.
- ▶ Terminal: Remove (pinch off) the corresponding coding ridge.

Note The terminal coding is described in Chapter 13.5.

# Connection example for PR 5500/12: Digital Inputs

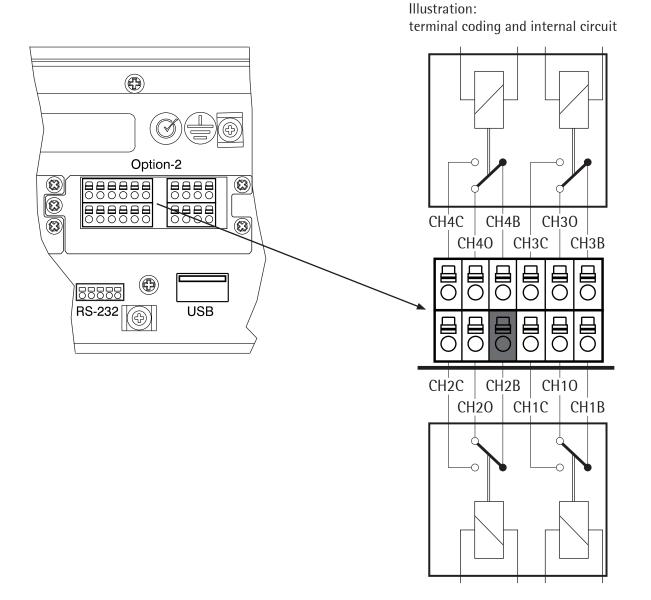

- ▶ Terminal block: Insert the coding pin into the slot of the position marked in gray.
- ▶ Terminal: Remove (pinch off) the corresponding coding ridge.

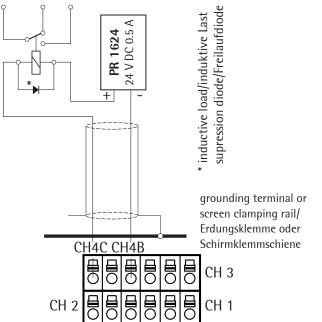

Note The terminal coding is described in Chapter 13.5.

The relay switches when the output is active (true). To protect the output circuit, relays must be equipped with free-wheel diodes.

# 4.4.8 PR 1721/61 ProfiBus-DP

#### 4.4.8.1 Specifications

Communication protocols and the syntax comply with the ProfiBus-DP standard according to IEC 61158/ EN 50170, with transfer rates up to 12 Mbps.

The card is inserted in the Option 1/FB slot, see Chapter 13.6.

Internal connection	Pin strip, 50-pin			
External connection	9-pin D-Sub socket (female) in module cover			
Transmission rate	9.6 kbps to 12 Mbps, baud rate auto-detection			
Connection mode	ProfiBus network, connections can be made/released without affecting othe stations			
Protocol	Profibus DP VO slave			
Configuration	GSD file 'SART_5500.gsd'			
Cables	Special ProfiBus color: violet, screened twisted pair cable			
Cable impedance	150 Ω			
Cable length	The max. distance of 200 m can be extended at 1.5 Mbps by means of an additional repeater.			
Bus termination	The bus termination in the last device is implemented via the integrated terminating resistor in the ProfiBus plug.			
Potential isolation	Optocoupler in lines A and B (RS-485)			
Dimensions (LxWxH)	55x50x22 mm			
Weight	Approx. 33 g			
Certificates	Profibus test center Comdec in Germany and PNO (Profibus User Organization). Industry-compatible CE, UL and cUL.			

Note	The GSD file is stored on the CD supplied with the device (Fieldbus directory of the respective device). The current file is also available for download via the Internet:

# 5 Commissioning

# 5.1 Power Failure/Data Protection/Warm Start/Cold Start

## 5.1.1 General Information

The calibration data and parameters of the internal weighing electronics system are saved to the EAROM on the weighing electronics board. Additional write protection is also available for calibration data and parameters as well as application programs (see Chapter 5.1.5.1).

The event logger is saved to the SPI flash memory.

The flash PROM include

- BIOS
- firmware
- application program
- alibi memory
- XML configuration files (for user management, setup, calibration, and application data)

Backups are saved to the SD card (secure digital card) (see Chapter 4.3.4).

#### 5.1.2 Power Failure

The entire content of the SD-RAM is stored to a Nand flash memory and remains there permanently when the power is interrupted or the device is disconnected from the power. When power is restored, all data are reloaded from the Nand flash memory to the SD-RAM and the device is restored to the operating status before the interruption. Dosing programs are stopped/started depending on user settings.

The SD card and the USB stick are both buffered by a battery.

If a HUB (splitter) is inserted into the USB slot and turned off, the USB stick is not buffered by a battery.

## 5.1.3 Warm Start

After a warm start all data remain unchanged, behaviour as after power failure, see Chapter 5.1.2.

# 5.1.4 Cold Start

## 5.1.4.1 General Information

There are several options executing a cold start:

- After power-on (see Chapter 5.1.4.2)
- With STOP+EXIT keys (see Chapter 5.1.4.3)
- With reset key (see Chapter 5.1.4.4)

## 5.1.4.2 Menu-driven Power Off

The menu-driven power off (see Chapter 6.1.9) does **not** save the entire content of the SD-RAM into a Nand flash memory. However during the cold start the last saved database is automatically loaded into the device.

#### 5.1.4.3 With STOP+EXIT Keys

During the cold start with STOP+EXIT keys (see Chapter 5.19.3) the database will be emptied and current process steps are deleted. The device automatically searches for an existing database on the SD card and ask to load it.

If ,disabled' is selected under [System setup]-[Operating parameters]-[Coldstart with STOP+EXIT], the STOP key must be pressed while the power cord is being connected to
execute a cold start.

## 5.1.4.4 With Reset Key

The device re-started (cold start) by a short-time (<1 sec.) actuating of the reset key (see Chapter 3.3.1).

- LED will flash once.
- No settings will be changed.
- The database will be emptied.
- Current process steps are deleted.
- Application must be restarted.
- The database must be restored.
- No network settings will be changed.

## 5.1.5 Overwrite Protection

#### 5.1.5.1 Via a CAL Switch

The device can have up to t CAL switches. CAL switches 1 and 2 are located on the main board.

CAL switch A is located on the weighing electronics board (see Chapter 4.4.4). These switches are accessible on the back device.

The exact function of individual switches is listed in the table below.

**Note** In general, we recommend activating the overwrite protection features via the software after calibration to prevent accidental overwrite/data loss (see Chapter 5.1.5.2).

	Write protection active	No write protection
CAL switch A, 1 and 2		□■I + opened geöffn.
back device	CAL-A CAL-1 CAL-2	CAL-A CAL-1 CAL-2

CAL switch	Meaning of 'Write Protection Active'
А	Prevents the calibration data and parameters of weighing electronics A from being changed
1	The following changes are prevented: - Calibration data and parameters of changed weighing points - Alibi settings
2	<ul> <li>The following is prevented:</li> <li>Loading/flashing of firmware, BIOS, and application programs to the device, see also Chapter</li> <li>Changing of license settings</li> </ul>
	This CAL switch is sealed in legal for trade mode.
Note	Changing means:

Note	Changing means:
	Input changes in the input fields as well as changes via the 'Restore' and 'Import' functions.

## 5.1.5.2 Via Software

Note	A unique check number is created every time a calibration or changed parameters are saved.
	This can be viewed under [System information]-[Show calibration check numbers] (see
	Chapter 5.20.7) and noted; if necessary.

The weighing point has a 'Settings locked' parameter in the [Parameters] menu item.

If this parameter is set for the weighing point,

- the calibration data and parameters of the weighing point are only viewed as if the corresponding CAL switch were closed.
- Only the 'Settings locked' parameter can be changed.
- Restoring/importing a weighing point is locked.

Note

If 'Settings locked' and 'W&M' were selected for at least one weighing point, this has the same effect as a closed CAL 1 and CAL 2 switch, see Chapter 5.1.5.1.

# 5.2 Switching on the Device

The device can be set up as follows:

- Via keys on the front of the device
- Via an external PC keyboard
- Via a notebook/PC using the VNC software (included on the CD)
- Via a notebook/PC using an internet browser

When the device is powered up, the following appears:

Checking Booting Restore	The device runs up.
No signal	Error message: no load cells are connected (see also Chapter 11.1).
No values from scale	Error message: no communication with the xBPI scale (see also Chapter 11.2). Error message: no weight values are read from ADC (analog-digital converter) (see also Chapter 11.1).
Scale not ready	Error message: no load cells or no scale is connected (see also Chapter 11.3).

Application menu Weighing Check weighing Device employed as t Configuration System menu System setup System information System maintenance	Operating erminal	The operating menu is displayed. The application and system menus are selected here. Select and confirm [System setup] using the cursor.
Connected devices Date & Time Operating parameters Network parameters Network share connec Fieldbus parameters Weighing point Display settings License settings User management Alibi memory		The setup menu is displayed. The date and time are set first, see Chapter 5.19.2.

# 5.3 Switching off the Device

See Chapter 6.1.9.

# 5.4 Warm-up Time

The device requires a warm-up time of 30 minutes before calibration.

# 5.5 Configuring and Calibrating via the Front Keys/PC Keyboard

The following options are possible:

- Via keys on the front of the device
- Via an external PC keyboard (USB connection)

Go to Chapter 5.7.

# 5.6 Configuring and Calibrating via a Notebook/PC

The following options are possible:

- Via VNC Viewer (on the enclosed CD-ROM), see Chapter 5.6.4.
- Via web browser (Microsoft Internet Explorer or Mozilla Firefox), see Chapter 5.6.5. Java (Sun) must be installed and activated for this option.

#### 5.6.1 Connecting the Device to the Network and Determining the IP Address

#### The DHCP server is active in the network

An IP address is assigned to the device automatically.

#### The DHCP server is not active in the network

If the device is connected to a notebook/PC via a point-to-point connection, an IP address is assigned via the 'AutoIP' function. This can take up to two minutes.

#### IndicatorBrowser

The IP address can be determined using 'IndicatorBrowser' (included on the CD-ROM) and via the 'host name' of the device (see also Chapter 5.6.3). The host name is composed of the device name and the last three bytes of the MAC ID. A label with the complete MAC ID is located on the outside of the device.

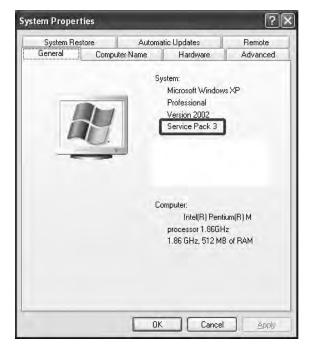

MAC:	00:90:6C:6B:6A:5E		sartorius
IP: .		•	)

#### Default host name: PR5500-6B6A5E

#### UPnP view with Microsoft Windows XP

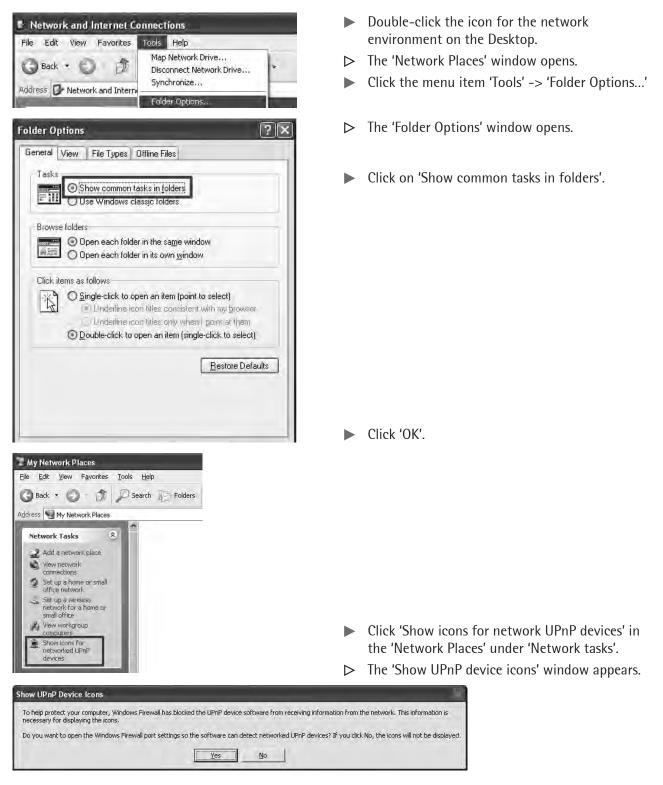

The IP address can also be determined using the 'Microsoft Internet Explorer' under 'Network' if the 'UPnP' view is turned on (default: off).

Procedure:

- ▶ Click 'Start' -> 'Control Panel' -> 'System'.
- ▷ The 'System Settings' window opens.

	Note	'Service Pack 2' or higher must be installed.
• (	Click 'OK'.	

Click 'Yes'.

Elle Edit View Fguorites Loois	Help:		2

- $\triangleright$  The icons for the devices are displayed.
- Click on the relevant icon using the right mouse button and select the 'Properties' menu item.
- ▶ Read the IP address.

## UPnP View with Microsoft Windows 7

If the network was **not** configured as a 'public network', the device icons are shown automatically under 'Network'.

## 5.6.2 Activating the 'DHCP' Network

#### Requirement

'Use DHCP' has been selected under [System setup]-[Network parameters].

This ensures that a valid address for device network identification can be assigned to the device; see Chapter 5.19.4.

Note	The last three bytes of the MAC ID are displayed in default host name. A label with the complete MAC ID is located on the outside of the device.
	A device with DHCP 'on' (default factory setting) and connected to an IT network (company network) with a DHCP server does not require any further action, but there will be a delay of 2–3 minutes. A network connection is then established automatically (device <-> workstation/PC).

Notebooks/PCs connected temporarily must have the following network adaptor properties (DHCP/DNS automatic):

eneral Advanced	General	
Connect using:	You can get IP settings assigned a supports this capability. Otherwise administrator for the appropriate	e, you need to ask your network
This connection uses the following items:	) Obtain an IP address autom	atically
Client for Microsoft Networks	Use the following IP address	6
File and Printer Sharing for Microsoft Networks	IP address:	
☑ 월 QoS Packet Scheduler ☑ 3 Internet Protocol (TCP/IP)	Subnet mask:	
Install Uninstall Properties	Default gateway:	9-9-6
Description	Obtain DNS server address a	automatically
Transmission Control Protocol/Internet Protocol. The default	Use the following DNS serve	r addresses
wide area network protocol that provides communication across diverse interconnected networks.	Preferred DNS server:	
Show icon in notification area when connected	Alternate DNS server:	
$\overline{\mathbf{v}}$ Notify me when this connection has limited or no connectivity	Validate settings upon exit	Advanced

For setup, the first network contact is possible only by determining the IP address/subnet mask automatically under 'Obtain an IP address automatically' (default factory setting) or 'Use the following IP address'.

#### 5.6.2.1 MAC ID

The MAC ID or (6-digit) hardware address, e.g., 00:90:6C:6B:6A:5E, is a unique number for network adaptor identification.

A label with the complete MAC ID is located on the outside of the device.

MAC:	00:90:6C:6B:6A:5E		sartorius	
IP:		•	)	

The last three bytes ensure that the initialized host name (in this case: PR5500-6B6A5E) is always unique.

#### 5.6.2.2 DHCP

Normally, DHCP servers are only used in IT-supported company networks and not on local (directly) connected notebooks/PCs.

Nevertheless, 'DHCP' must be activated on the PC. 'DHCP' devices detect each other after a cyclical automatic 'DHCP' server search is run with a timeout (approx. two to three minutes) because they use an 'auto-IP' address within a range of 169.254.0.1 to 169.254.255.254.

Note	When the IT/DHCP network cable is temporarily connected between the notebook/PC and a device, the DHCP server is lost and the notebook/PC returns to the auto-IP address within approx. two minutes.
	Reason: At every network cable connecting the DHCP server/client relationship is checked newly.

#### Example

If the search time is exceeded (because there is 'no server found'), the PR 5500 is assigned an IP address automatically (e.g., 169.254.0.123). The same applies to the notebook or PC (e.g., 169.254.0.54). These IP addresses are different on both sides:

- the same in terms of the first two octets of the IP address (e.g., network ID 169.254.)
- different in terms of the last two octets of the IP address (e.g., host ID 0.123.)

#### 5.6.2.3 Host name (device name)

The host name must always be unique.

If names are user-defined (host name is editable)

- the same host name must not exist twice within the network ID.

For example: correct assignment would be host name device 1: PR5500 scale1; device 2: PR5500 scale2 The 'default' (PR5500-6B6A5E) is always correct, whereby the last three bytes of the MAC ID are unique.

- This is limited to 2–24 characters.

Permitted are

- letters A-Z, a-z
- numbers 0–9, but these must not constitute the first or last character
- hyphens ('-'), but these must not constitute the first or last character

# 5.6.3 Searching for Devices in the Network using 'IndicatorBrowser'

The address can be determined using the 'IndicatorBrowser' program (on the enclosed CD-ROM).

Install and start the 'IndicatorBrowser'. IndicatorBrowser Indicator Browser 01.00.00 203706 2014-02-10-08/01-51 The 'IndicatorBrowser' searches within the current Hostname PR5500 967EA9 PR5410-707C97 network ID, e.g., 169.254. and 172.24., on all available DevType PR5500 Status Valid until IP-Addr 14:19:03 14:19:03 14:19:03 14:19:03 14:19:03 O#onli... O#onli... 172.24.24.50 network adaptors in the notebook/PC (several possible/ X3 PR5900 172.24.21.26 PR5900-96762F O#onli.. Wanni-D61026 PR5410-705AA8 PR5230 O#onli. recommended, e.g., LAN global/LAN local). 14:19:03 14:19:03 14:19:03 14:19:03 14:19:03 14:19:03 172.24.24.45 172.24.21.22 172.24.22.43 O#onli. Open Click the button to open the default web browser, e.g., Microsoft Internet Explorer, directly using the marked IP address. Click the button to re-start the network Click the button to localize the associated device. Shortterm visual feedback from the device: search. You must wait 2-3 minutes. Display background flashes. Acoustic signal for each device that was detected as "online.

If the browser window remains empty after the minimum wait time, or if the expected device is not listed, the network ID of the local notebook/PC must be checked and changed, if necessary.

Note Only certain Sartorius Intec devices are supported by the 'IndicatorBrowser'.

## 5.6.4 Operation using the VNC Client Program

VNC (on the enclosed CD) stands for "Virtual Network Computing" and is a program for the remote operation of computers.

The program distinguishes between the VNC server and VNC client (viewer). The server program is part of the device software. The client program (viewer) must be run on the notebook/PC in order to operate the device.

NoteThe VNC version provided on CD must be used.More recent VNC versions (freeware) from the internet are not supported by the device.

Connect	tion details		$\sim$
V2	VNC server:	172.24.20.57:1	ОК

For direct operation using the VNC program, the IP address (extended by [1]) must be specified when you run the program, e.g., 172.24.20.57:1.

VNC access can be limited to specific notebooks/PCs in the network; see Chapter 5.19.4. The VNC user interface appears.

## 5.6.5 Operation via a Web Browser

Note	Instead of the VNC viewer, a web browser, e.g., Microsoft Internet Explorer, Mozilla Firefox, can be used directly.
	The disadvantage is that an additional Java installation is required.
	In addition to VNC, this includes:
	- Easy configuration printout.
	– Easy display of
	- database tables
	- Alibi memory content
	- manuals
	– event logs
	- log files
	– error logs
	- Easy download of language files.

▶ Enter and confirm the [IP address] for the internet browser.

## Configuration

- [Remote Configuration (VNC)]
- [Remote Configuration (VNC) Pop-up Window]
- [Configuration Printout]

#### View

- [Weighing Points]
- [Weighing Points Pop-up Window]
- [Browse Database]
- [Browse alibi memory]
- [Manuals]

#### Service level

- [Browse eventlog]
- [Browse logfiles]
- [Show last fatal system error]
- [Screenshot]
- [Export database]
- [Export Alibi memory]
- [Export service report]
- [Backup and restore setup data]
- [Upload language files]

For device operation using the VNC program without additional installation of VNC client.

,Java' installation is necessary, see page 122. Can be used for printing the configuration data as a text file, see Chapter 13.1.

Displays the weighing points in a table, see Chapter 6.1.13.1.

,Java' installation is necessary, see page 122.

Browse the application-specific database, see Chapter 6.1.13.2.

Browse the alibi memory, see Chapter 6.1.13.3.

PDF files are saved to the SD card (SD cards supplied with device by Sartorius Intec only), see Chapter 6.1.13.4.

Browse event log, see Chapter 6.1.13.5. Browse, display, copy, print log files, see Chapter 6.1.13.6.

Browse, display, copy, print the error log, see Chapter 6.1.13.7.

Saves a screenshot, see Chapter 6.1.13.8.

Export the database as an XML file, see Chapter 6.1.13.9.

Export the alibi memory as an XML file, see Chapter 6.1.13.10.

Export the service report as an XML file, see Chapter 6.1.13.11.

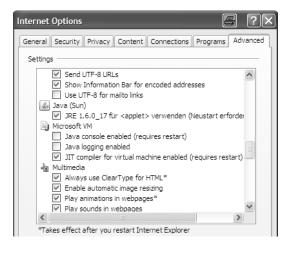

Create backup of the setup data and restore setup data, see Chapter 6.1.13.12.

Uploads the language files to the device, see Chapter 6.1.13.13.

Note

#### Example: Microsoft Internet Explorer in Windows XP

With Internet Explorer, first check that the required Java (Sun) applet is installed and activated.

- Start Internet Explorer.
- ► Click [Tools] [Internet Options...]
- Click on the [Advanced] tab.
- Iava (Sun)]: Check whether entries are provided.
- ▶ If so, check ☑ [IRE 1.6.xxx ...] (not activated by default).
- If no entries are provided, download the 'Java (Sun) applet' as freeware from the internet and install it.

In earlier Windows installations, Java was provided as standard, but not activated.

#### Example: Microsoft Internet Explorer in Windows 7

With Internet Explorer, check if the required Java (Sun) applet is installed. If it is not installed, the link for a Java download is suggested automatically.

	······································				
	Note	e Pressing the reset key during a long time (>5 sec.) triggers a cold start.			
	- The settings will not be changed.				
	- The database will be emptied.				
	<ul> <li>Current process steps are deleted.</li> </ul>				
- Application must be restarted.		- Application must be restarted.			
		- The database must be restored.			

## 5.6.6 Resetting Network

Pressing the reset switch during a long time (>5 sec.) resets the network settings to default/factory settings.

That means:

- LED will be switched on a second time.
- ,DHCP' is activated.
- Web server is enabled.
- VNC access is enabled.
- ,Host name' is initialized e.g. PR5500-6B6A5E (device type-MAC-ID).

Example of MAC-ID: 00-90-6C-6B-6A-5E

This ensures that a valid address for identification of the instrument in the network can be assigned to the device, see Chapter 5.19.4.

Note	The last 3 bytes of the MAC ID are displayed. A label with the complete MAC ID is fitted to the outside of the device.
	A device set to DHCP $\square$ (default/factory setting) and connected to an IT network (company network) with a DHCP server does not require further actions except for a <b>23-minute waiting time</b> . Subsequently, a network connection is established automatically (device <-> workstation/PC).

# 5.7 Help Function

The help function can be accessed from any parameter window using the ? key. A window appears in which you can scroll up and down through the content using the cursor keys (1,  $\downarrow$ ,  $\blacktriangle$ ,  $\checkmark$ ). The window can be closed using the ESC/EXIT key.

Note

The help text is given in English as a default if the corresponding language is unavailable.

# 5.8 Selecting the Operating Language

Factory settings: system language = operating language (display language)

The operating language can be changed as follows:

- In the System menu [System setup]-[Operating parameters]-[Operating language], select the desired language using the cursor keys, confirm the selection and press the [Save] soft key, see also Chapter 5.19.3.
- In the System menu [System setup]-[User management]-[Create/Copy/Change user]-[Operating language] select with the cursor keys, confirm the selection, and save via the [Save] soft key, see also Chapter 5.9.2.1.
- You can also assign the F1 or F2 function keys with the [Change language] function, see Chapter 5.19.3. The operating language can be changed from any menu.

When user management is active,

- only the language assigned to the logged-in user will be displayed after the operating language is changed in the system menu.
- the changed operating language is displayed after the user logs in.

# 5.9 User Management

#### 5.9.1 General Information

By means of the user management, the access to various menu levels of the instrument can be limited, if the necessity arises. This includes e.g. system set-up, system maintenance, access via the website and the various levels of the application (application-specific).

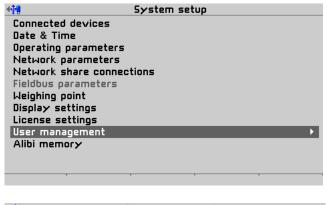

**Note** The user management can be activated optionally. However, it is not required for normal operation.

During system installation and set-up, we recommend leaving the user management de-activated. This facilitates the access to the various menus and to the website.

Always activate the user management, if

- several persons work with the unit or have access to it.
- the target is to prevent unauthorized persons from making changes to the unit or from influencing the processes controlled by the unit.

## 5.9.2 Activating User Management

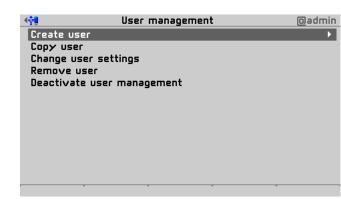

User management is not activated by default.

 Select and confirm the [System setup]-[User management] menu item.

- User management

   Image: Constraint of a constrai
- $\triangleright$  A prompt window appears.
- Press the corresponding soft key.

The users 'admin' and 'default' are created automatically and cannot be deleted.

The administrator is always created with all rights authorized. These cannot be restricted.

The 'default' user has restricted rights.

If the 'admin' user (administrator) is logged in, this user can

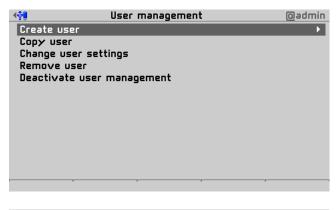

- \_ create new users
- copy users
- change user settings
- remove users
- deactivate user management.

The administrator can create new users with all rights.

#### 5.9.2.1 **Creating new Users**

User name

Password

Navigate to [System setup]-[User management] and confirm the [Create user] menu item.

BABC.. Enter user name and password \*\*\*\*\*\*\*

#### An input window appears. $\triangleright$

- Note Special characters are not allowed! Default: user name: ,admin' password: admin
- Enter the user name using the keyboard and confirm.
- Enter a password (access code) using the keyboard and confirm.
- $\triangleright$  The user settings window appears.
- $\triangleright$  The user name is displayed with an automatically generated user ID.
- Select the corresponding lines with the cursor and confirm.

#### [User activated]

 $\blacktriangleright$  Check the appropriate box  $\blacksquare$ .

An activated user can now log in.

## 5.10.4 System setup: Network parameters

System setup

- Network parameters

- HW address	xx:xx:xx:xx:xx, displayed only
— Device name (hostname):	e.g.: Hopper 01, Entry: 2-24 alphanumerical characters
– use DHCP	Check the box $oldsymbol{B}$ , if the IP address is to be automatically assigned to a network.
– IP address	nnn.nnn.nnn.nnn; current values are displayed when DHCP has been selected.
– Subnet mask	nnn.nnn.nnn.nnn; current values are displayed when DHCP has been selected.
— Default gateway	nnn.nnn.nnn.nnn; current values are displayed when DHCP has been selected.
Remote access:	
- Webserver enabled	Check the box $oldsymbol{\overline{M}}$ , if the functions are to be shared via web server.
– VNC-Zugang enabled	Check the box $oldsymbol{B}$ , if the functions are to be shared via VNC.
– VNC client	nnn.nnn.nnn.nnn; enter the corresponding number.
– VNC password	********* (max. 8 characters); protect the device from unauthorized access.
– Default	Settings are reset to factory settings.
- Save	The settings are saved.

## 5.10.5 System setup: Network share connections

System setup

– Network share connections

Configure Network share connection	ns Connected network share are displayed.
– Add	Add a new network share connection.
- Connection name	Unique name in the device, Entry: max. 16 alphanumerical characters
– Server	Server name (max. 64 characters, valid Hostname acc. to RFC 952) or IP address can be entered.
- Share name on server	Unique name on server, Entry: max. 64 characters (Must match the share name.)
— Folder path	Path to folder relative to share. Folder must exist.
	Entry: max. 128 characters
	Not allowed are: ,/' (slash) or , ' (space) at beginning or end, ,.' (dot) at end and some specific combinations of ,.', '/', and , ' (space).
– Domain	(Optional) Name of Windows domain, Entry: Max. 64 characters
– User name	(Optional) User name, Entry: Max. 64 alphanumerical characters
- Password	(Optional) Password, Entry: Max. 64 characters
— Test	Connects temporary to the share and tries to create a file in the specified folder.
– Save	The settings are saved.
– Change	Change a network share connection.
– Remove	Remove a network share connection.

## 5.10.6 System setup: Fieldbus parameters

— Fieldbus	parameters	
	Fieldbus protocol:	The name of the installed fieldbus card is displayed.
		varies according to fieldbus card
	— Default	Settings are reset to factory settings.
	– Save	The settings are saved.

## 5.10.7 System setup: Weighing point – Weighing point A

#### System setup

– Weighing points

- Weighing point A

<not assigned>, Internal weighing point, xBPI scale, SBI scale, Pendeo Truck, Pendeo Process, PR-Net weighing point, Mettler-Scale, SMA scale

# 5.10.8 System setup: Weighing point: Weighing point A: Internal weighing point

orroro bystem	secupi rreigning pointi rr	eighnig point in internal weighnig point
System setup		
– Weighing poin	nt	
– Weighir	ng point A	Internal weighing point
– Calit	0	Calibrate weighing electronics
1 - 1	Vew	
	<ul> <li>Reset SPAN and dead load</li> </ul>	<continue>, Cancel</continue>
	— Max (Maximum capacity)	Upper limit of weighing range 0.000010<3000>9999998 <kg>, t, lb, g, mg, oz</kg>
	– Scale interval (1 d)	Selection <1>, 2, 5, 10, 20, 50 displayed according to the decimal places at Max and the weight unit
	– Dead load at	by load, by mV/V, Save
	– Max at	by load, by mV/V, by date, Linear, Save
	<ul> <li>calibrated with mV/V</li> </ul>	displayed only
	<ul> <li>Sensitivity</li> </ul>	displayed only
	– Save	The calibration is saved.
- 1	Modify	For small modifications only, such as resetting the dead load. Otherwise selected "New."
	— Max (Maximum capacity)	Upper limit of weighing range 0.000010<3000>9999998 <kg>, t, lb, g, mg, oz</kg>
	– Scale interval (1 d)	Selection <1>, 2, 5, 10, 20, 50 displayed according to the decimal places at Max and the weight unit
	– Dead load at	by load, by mV/V, Save
	– Max at	by load, by mV/V, by date, Linear, Save
	<ul> <li>calibrated with mV/V</li> </ul>	displayed only
	<ul> <li>Sensitivity</li> </ul>	displayed only
	– Save	The calibration is saved.

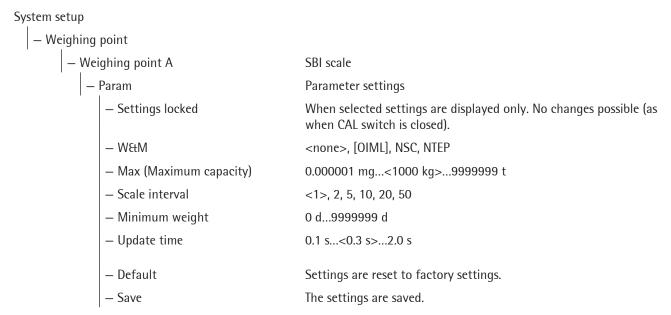

– Units	1, 2, 3; additional weight units for display
– Units 13	kg, t, lb, g, mg, oz
— Display accuracy	<same>, 1 level lower, 2 level lower, 3 level lower, 3 level higher, 2 level higher, 1 level higher</same>
– Default	Settings are reset to factory settings.
– Save	The settings are saved.
– Parameter	Parameter settings
– Settings locked	When selected settings are displayed only. No changes possible (as when CAL switch is closed).
– W&M	<none>, [OIML] (not possible when range mode "multi-interval" is selected or Max has been set with more than three decimal places), NSC, NTEP</none>
– Measurement time	5 ms, 10 ms, 20 ms, 40 ms, 80 ms, <160 ms>, 320 ms, 640 ms, 960 ms, 1280 ms, 1600 ms, [≤1 s]
– Digital filter	<off>, Bessel, aperiodic, Butterworth, Tschebyscheff</off>
	The digital filter can only be switched on if a measurement time is set to ≤160 ms; see Section "[Digital filter]" on page 176.
– Cutoff frequency	The cutoff frequency for the low pass filter can be set from 0.01 to 40.00 Hz; only when the digital filter is selected. The Hz range depends on the measurement time; see Section "[Cutoff frequency]" on page 175.
<ul> <li>External load cell sup- ply</li> </ul>	≤8 V, >8 V
– Standstill time	0.00 s<0.50 s>2.00 s (The range depends on the measurement time.)

– Change user settings	The settings for the selected user are changed.
– Save	The settings are saved.
– Remove user	Users "admin" and "default" cannot be deleted. A prompt window appears.
– Deactivate user management	Any users created are deleted. A prompt window appears.

## 5.11 Calibrating the Internal Weighing Point

#### 5.11.1 General Information

With applications for use in legal metrology, the legal requirements and the conditions given on the test/ approval certificate must be taken into account when selecting the settings.

There are two ways to save the calibration data:

- Via a CAL switch
- Via software

During calibration, the instrument must be set to gross weight display (reset tare, if necessary).

#### 5.11.1.1 CAL Switch

The calibration data can be protected with CAL switch A and the weighing electronics with CAL switch 1 (see Chapter 5.1.5.1).

#### 5.11.1.2 Software

A unique check number is created every time a calibration or changed parameters are saved. This can be viewed under [System information]-[Show calibration check numbers] (see Chapter 5.20.7) and noted.

#### 5.11.2 Showing the Calibration Data

#### 5.11.2.1 Overwrite Protection via a CAL Switch

WP-A	Max	3000g	e=	1g

If the CAL switch is closed, a tool tip appears. The data under [Parameters], [Calib], [Units] is displayed only.

- E.g., press the [Calib] soft key.
- The calibration data is displayed: Scale interval and maximum capacity (Max)
   Scale interval(s)
   Dead load in weight and mV/V
   Weight and mV/V for maximum capacity
   Test load\* and corresponding mV/V
   Number of internal counts and voltage per scale interval

The calibration data and parameters (press [Parameters]) are displayed in the format entered/determined during calibration.

\* After input with mV/V, the maximum capacity and the mV/V value entered are displayed.

#### 5.11.2.2 Overwrite Protection via Software

WP-A	Max	3000g	e=	19		Setti ordi

If 'Settings locked' is active, a tool tip appears accordingly.

The data under [Parameters], [Calib], [Units] is displayed only.

- E.g., press the [Calib] soft key.
- > The calibration data is displayed.

#### 5.11.3 Increased Resolution (10-fold)

In the [Weighing points] menu, the weight is displayed with increased resolution (10-fold) for five seconds after a weighing point is selected, using the following keys:

- Key 🍯
- Function key F1 or F2 (when function has been assigned previously in the [Operating parameters] menu)

If the parameter "W&M" is selected for the weighing point, the weight value is marked as an invalid weight with the symbol  $\triangle$ . Switch to normal resolution after 2-3 seconds.

#### 5.11.4 Selecting the Calibration Mode

Note The menu item 'Modify' is only used for small changes (e.g., changing the dead load/preload, changing the mV/V values for dead load/preload and/or Max, changing the scale interval). Otherwise selected 'New'.

WP-A	Max	3000g	e=	19
→0 <del>←</del>				0,

Sensitivity		981.00 🕬	4.	708786 🖄
by load t	y mV/V			Save

Select and confirm [System setup]-[Weighing point]-[Weighing point A]-[Calib].
 Press the [Modify] soft key.

- Select the menu item [Dead load at].
- Either press the [by mV/V] soft key to enter the value again or clear the scale/hopper and press the [by load] soft key to reset the dead load.
- ▶ Press the [Save] soft key to save the calibration.
- ▷ The reference value is calculated for the electronics test.

#### 5.11.5 Determining the Maximum Capacity [Max]

The maximum capacity (Max) determines the maximum weight without dead load of the weight to be measured and the displayed number of digits behind the decimal point. Normally, Max is less than the load cell capacity (nominal capacity x number of load cells).

WP-A	Max	3000g	e= 0.1g
+		121	.7 。
<b>.</b> ∢ <b>∲</b> ¶		Calibration	@admin
Max		30000 d	3000.0 g
Scale interval		1 d	0.1 g
Dead load at			0.000000 🛩
Max at			1.000000 🖄
not calibrated			
Sensitivity		83.33 🕫	0.400000 Ma
			Save

Permissible values for the maximum capacity are: Max weight value from 0.00010 to 9999999 in t, kg, g, mg, lb or oz.

Max weight value must be an integer multiple of the scale interval (1 d). It may have up to 6 digits and is entered as a numeric value with or without a decimal point.

- Enter the maximum capacity with decimal places (in this example: 3000.0).
- ▶ Double click key to select the weight unit.
- Confirm the entries.
- ▷ The confirmation is displayed with "setting Max...".
- ▶ Press the [Save] soft key to save the calibration.
- ▷ The reference value is calculated for the electronics test.

Note	If linearization is active (see Chapter 5.11.12): After selection of the line "Max at" the following tip is displayed:
	"cannot be changed here while linearization is active" Only deletion of linearization points deactivates linearization!

## 5.11.6 Determining the Scale Interval [Scale interval]

The scale interval (d) is the difference between two successive display values.

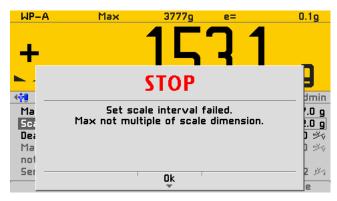

With a scale used in legal metrology, this value is called the "verification scale interval," which corresponds to the scale interval: d = e.

#### Example

Max = 6000 kg Scale interval (1 d) = 2 kg Calculation for scale interval for Max (automatic):

d = Max / Scale interval (1 d) d = 6000 kg / 2 kg d = 3000

#### Vorgehensweise

The weight unit is taken from [Max]. The number of digits behind the decimal point is also automatically determined when [Max] is entered.

- Select the scale interval (1 d).
- The scale interval (d) is then calculated, based on the Max weight value.
- Confirm the entries.
- ▷ The confirmation is displayed with "setting scale interval...".

This message appears if the maximum capacity [Max] of the scale range is not an integer multiple of the scale interval.

Note	If a liniarization was executed (see Chapter 5.11.12): After selection of the line "Dead load at" the following tip is displayed:
	"cannot be changed here while linearisation is active"
	Only deletion of linearization points deactivates linearization!

#### 5.11.7 Determining the Dead Load [Dead load at]

NP-A 1	Мах	3000g	e=	2g
+	1	2	2.0	] 。
	Calibr	ation		@admin
Max		1500	d	3000.0 g
Scale interval		1	d	2.0 g

To calibrate the scale with weights:
--------------------------------------

▶ Press the [by load] soft key.

- ▶ Place the calibration weight on the scale.
- ▶ Enter the weight of the calibration weight.
- ► Confirm the entries.

The weight unit for the calibration weight (double click to change) may differ from the unit in the device; conversion is automatic.

Afterward, the following message is displayed: "setting SPAN by load..."

The weight value of the calibration weight, weight unit, and measuring signal in mV/V corresponding to this value are displayed in the [calibrated at] line.

#### **Possible Error Messages**

This message appears when the scale interval is too small, if ,W&M' has been selected. Remedy:

Enter larger scale interval.

This message appears when the scale is not stable. Remedy:

- ▶ Check the mechanical function of the scale.
- Adapt the filter setting; reduce the resolution.
- Adapt the stability conditions.

This message appears if the load has been removed from the scale rather than added.

WP-A Max 3000a 1g +OP **4‡**¶ dmin Set SPAN failed. ).0 g Ma weight >Max Sca .0 g B ≫√√ Dea Ma ] 🖄 cal m¥ t b Ser 此日 Ok by

This message appears when an attempt is made to calibrate the scale with a weight heavier than the Max.

#### 5.11.9 Calibrating with mV/V [Max at]

The scale can be calibrated without weights. During input of the load cell mV/V value, the acceleration of gravity at the place of installation can be taken into account. The STAR load cell data is based on the acceleration of gravity in Hamburg, Germany: 9.81379 m/s<sup>2</sup>.

#### 5.11.9.1 SPAN

SPAN indicates the equivalent input voltage in mV/V related to the maximum capacity (Max) of the scale. It is calculated as follows:

SPAN [mV/V] = load cell capacity x load cell sensitivity Cn\* [mV/V] load cell capacity (nominal load Emax x number of load cells)

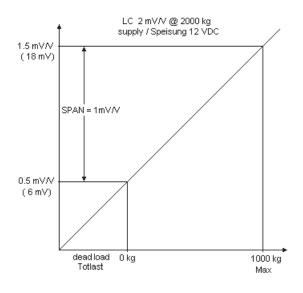

\* Load cell sensitivity Cn = rated output Cn (see technical data of the load cell)

#### 5.11.9.2 Dead Load

The input voltage in mV/V equivalent to the dead load can be calculated by using the dead load rather than the maximum capacity in the formula specified above.

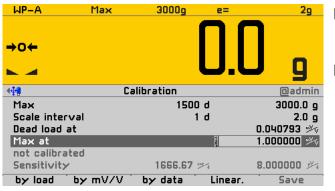

Normally, calculation of the dead load (scale without load/empty hopper) is not necessary.

Subsequent dead load correction (as described in Chapter 5.11.11) can be used for later re-determination of the dead load, when the scale/hopper is empty.

#### Example

- 1 load cell with rated output  $C_n = 2 \text{ mV/V}$
- at nominal load of 2,000 kg
- Maximum capacity 1,000 kg
- Dead load 500 kg
- Load cell supply voltage 12 V DC

- Press the [by mV/V] soft key to enter the value for Max and to correct the dead load if necessary (see Chapter 5.11.11).
- Confirm the entries.

#### 5.11.10 Calibrating the Scale with Load Cell Data (Smart Calibration) [by data]

If the scale is not used in legal metrology, calibration without weights can be performed. The easiest method is the one using load cell data without calculation.

#### Procedure

WP-A	Мах	3000g	d=	2g
→0←			0.0	g
4 <b>0</b>	Load cell	configuration	п	@admin
Number of	load cells	Þ		4 load cells
тах. сара	city of load c	ell		3000 kg
Gravity		9	.81379 m/s	
Hysteresis error		п	ot specified	
Certified data		all load	cells same	
LC rated output		1	.000000 🖄	
Enter	Calc			

[Number of load cells]

Number of load cells connected in parallel (1, 2...<4>...9, 10)

#### [max. capacity of load cell]

Max. capacity Emax of a load cell (not the overall nominal weight of the scale!)

#### [Gravity]

Acceleration of gravity at the place of installation; default is the value for Hamburg, Germany: 9.81379 m/s<sup>2</sup>.

#### [Hysteresis error]

If [not specified] is switched to [specified], values for [Correction A] and [Correction B] must be entered. This data must be taken from the load cell certificate.

#### [Certified data], [LC rated output], [LC output impedance]

When [all load cells same] is set, only one value each must be entered for [LC rated output] and the output impedance [LC output impedance].

For [each load cell specific] press the [Enter] soft key to enter individual data for each load cell.

- Press the [by data] soft key. Select the 'Number of load cells' line.
- $\triangleright$  A selection window appears.
- Select the appropriate option.
- Take the next values from the technical data of the load cells (see below).
- ▶ Press the [Calc] soft key to start the calculation.
- Confirm the calculation to save the calculated mV/V value to the calibration data.

#### 5.11.11 Subsequent Dead Load Correction

If the hopper/platform weight changes by an amount that is higher than the zero-setting range; e.g., due to dead load reduction, dead load increase, or mechanical changes, the functions for automatic zero tracking and manual zero setting no longer work.

The range currently used by zerotrack or zeroset is displayed in the menu [System information]-[Show HW options]-[WP A]-[Monitor].

Press the key to switch on increased resolution (10-fold) for the weight value.

If the full zero-setting range is already being utilized, you can still correct the dead load (overwrite protection must be deactivated, see Chapter 5.1.5) without affecting other calibration data/parameters.

Calibration is then accessed via [Calib]-[Modify] and the dead load is specified with 'Dead load at' [by load] (see Chapter 5.11.7).

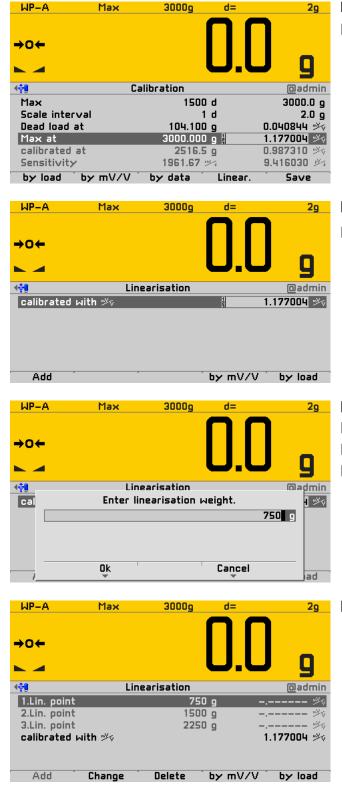

Note	If a linearization was executed (see Chapter 5.11.12) the dead load can not be subsequently corrected! After selection of the line "Dead load at" the following tip is displayed:
	"cannot be changed here while linearization is active"
	Only deletion of linearization points deactivates linearization!

#### 5.11.12 Linearity

The measurement range for a straight can be optimized by setting the linearization points.

#### Requirement

Max and dead load calibration was executed.

#### Procedure

► Go to the [Calib]-[New]/[Modify] menu, select the 'Max at' line and press the [Linear] soft key.

- ▷ The linearization menu is displayed.
  - Press the [Add] soft key to set a linearization point.

- $\triangleright$  The following input window appears.
- ▶ Enter the desired value using the keyboard.
  - Press the [OK] soft key.
- Repeat these steps to set up to three linearization points in succession.
- ▷ The window shows the set linearization points.

After pressing [mV/V], the value can be entered directly.

After pressing [Change] the selected linearization point can be changed.

After pressing [Delete] the selected linearization point can be deleted.

Max

- Press the EXIT key to finish calibration.
- $\triangleright$  You are prompted to confirm.
- Press the [Yes] soft key to exit calibration without saving.
- Calibration is finished without saving with the following display:

'undoing calibration...'

### 5.11.15 Display Units

The device is calibrated with a selected weight unit. Up to two more units can also be displayed.

The weight display is switched using the function keys (F1 or F2). This must be assigned beforehand, see Chapter 5.19.3.

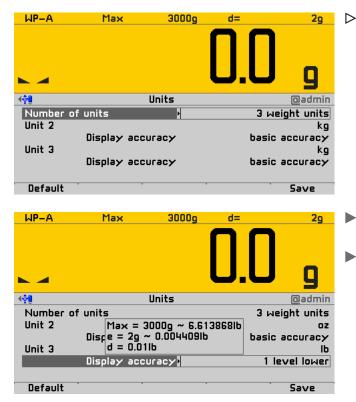

When three units are displayed, they are shown in the following sequence: from 1 to 2, 3, 1, 2, and so on.

If unit 2 or 3 is displayed, the symbol  $\triangle$  is also shown on devices used for legal metrology, when the non-legal weights are displayed.

In the following example, a second unit is set in [oz]. The display accuracy is set to [raw]. This means that the scale interval in weight roughly corresponds to the calibrated scale interval.

The third unit [Ib] has a display accuracy that is one level higher, meaning that the scale interval is roughly one level smaller than the calibrated scale interval. The values for Max and Min for the additional units are (roughly) calculated taking the associated scale intervals into account.

WP-A	Max	3000g	e=	1 <u>g</u>		Go to the menu [System setup]-[Weighing point]

### 5.11.16 Parameter Input

WP-A	Max	3000g	d=	2g
→0← ► ◀			0.0	g
- <b>4</b> ∲¶	Weig	hing point		@admin
Settings lo	cked			
W&M				none
Measureme	ent time			320 ms
Digital filte	r			no filter
External lo	ad cell supply		above 8 V	
Standstill t	ime			0.50 s
Default				Save

Access the menu as follows: [System setup]-[Weighing point]-[Weighing point A]-[Parameters].

### [Settings locked]

The weighing point settings and assignment can only be viewed as if the corresponding CAL switch were closed; see Chapter 5.1.5.2.

### [W&W]

Setting for operation in legal metrology. Select [none], OIML, NTEP (for USA) or NSC (for Australia); see Chapter 5.11.16.1.

### [Measurement time]

The duration of a measurement can be selected. Possible values include: 5 ms, 10 ms, 20 ms, 40 ms, 80 ms, 160 ms, 320 ms, 640 ms, 960 ms, 1280 ms, 1600 ms.

### [Cutoff frequency]

The smaller the cutoff frequency, the slower the measurement and the more stable the measurement result.

The cutoff frequency for the low pass filter can be selected. The permitted range is 0.01...40.00 Hz. The available options depend on the measurement time.

The line 'Cutoff frequency' only appears if the digital filter is switched on.

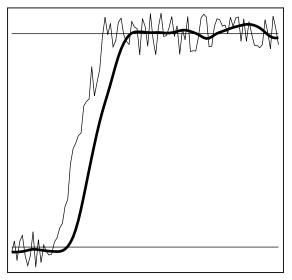

### [External load cell supply]

The external supply voltage is selected. Possible values: less than or equal to 8 V, higher than 8 V.

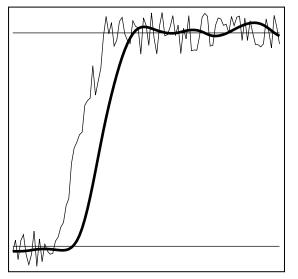

# [Digital filter]

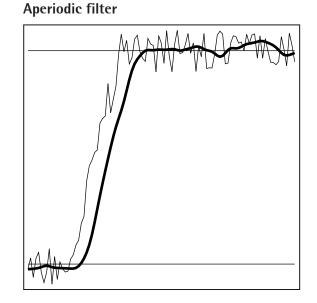

The following includes examples of interference signals for the different filter types:

# **Bessel filter**

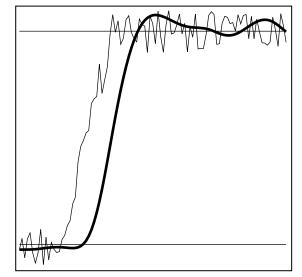

**Butterworth filter** 

Tschebyscheff filter

A digital filter can be switched on only with the measurement time set to  $\leq$ 160 ms. The following filter types can be selected: no filter, Bessel, aperiodic, Butterworth, Tschebyscheff. If no particularly frequent fluctuations are expected in ongoing operation, the following settings are recommended:

[Measurement time]: ≤160 ms [Digital filter]: aperiodic [Cutoff frequency]: 2.00 Hz

WP-A	Max	3000g	d=	2g
→0← ►			0.0	g
- <b>4</b> ∲¶	Weig	hing point		Qadmin
Standstill tim	e	1		0.50 s

Zeroset rang	e			50.00 d
Zerotrack				Yes
Zerotrack ra	nge			25.00 d
Default				Save

# [Standstill time]

The parameters [Standstill time] and [Standstill range] can be used to define the stability of the scale (stable balance).

The [Standstill time] parameter is entered in seconds. The permitted range is 0.00...2 s.

The time can be entered from 0.00 to 2.00 seconds, but makes up at least one measurement time.

# [Standstill range]

As long as the weight fluctuations remain within this range, the device is determined to be stable. The [Standstill range] parameter is entered in "d." The permitted range is 0.01...10.00 d.

# [Tare timeout]

Timeout for a tare/zeroset command that cannot be executed (e.g., due to mechanical instability of the scale, incorrect filter setting, resolution too high, standstill condition too strict).

This parameter is given in seconds. The permitted range is 0.0...<2.5>...25 s.

At 0.0 s taring is only carried out when the scale is already stable.

# [Zeroset range]

Determine a ±range around the zero point determined by the dead load during calibration; within this range

- the displayed gross weight can be set to zero by pressing the zero-setting key (or by a corresponding external command), and
- automatic zero tracking is active.

Setting range: 0.00...10000.00 d

# [Zerotrack]

The zero display is automatically maintained within set limits.

Possible values: no/yes

When "No" is selected, the next three parameters are not shown.

When "Yes" is selected values for the next three parameters must be entered.

# [Zerotrack range]

Range within which the automatic zerotrack is balanced. Setting range: 0.25...10000.00 d

WP-A	Max	3000g	d=	<b>2</b> g
→0← ► ⊿			0.0	9

Range mode	2		sir	igle range
Default				Save

# [Zerotrack step]

If a weight change exceeds the adjusted value, automatic tracking does not function any more. Setting range for automatic tracking increments: 0.25... 10 d

### [Zerotrack time]

Time interval for automatic zero tracking. Setting range: 0.1...25 s

### [Overload]

Weighing range above the maximum capacity (Max) without error message. Setting range: 0...99999999 d.

### [Minimum weight]

Minimum weight at which a print command can be triggered. Setting range: 0...9999999 d.

### [Range mode]

Possible values: single range, multiple range, multi-interval. For scale range selection, see Chapter 5.11.16.2.

# [Default]

Settings are reset to factory settings.

### [Save]

The settings are saved.

### 5.11.16.1 Operation in Legal Metrology

Note	The following settings are available; but the Maxxis 4 is <b>not</b> legal for trade!
------	---

Go to [System setup]-[Weighing point]-[Weighing point A]-[Parameters]-[W&M] and choose between: [none] and the legal metrology modes [OIML], [NTEP], or [NSC].

	[none]	[OIML]	[NTEP]	[NSC]
Gross weight display	В	В	G	G
Recommended min. measurement signals	0.2 mV/V @ 30,000 d	0.2 mV/V @ 3,000 e	0.2 mV/V @ 3,000 e	0.2 mV/V @ 3,000 e
	0.4 mV/V @ 60,000 d	0.4 mV/V @ 6,000 e	0.4 mV/V @ 6,000 e	0.4 mV/V @ 6,000 e

If operation for legal metrology is switched on, the parameter settings (zero tracking etc.) must be selected accordingly. The device does not carry out a check of this.

A unique check number is created every time a calibration or changed parameters are saved. This can be viewed under [System information]-[Show calibration check numbers] (see Chapter 5.20.7) and noted. See also Chapter 5.11.1.

### 5.11.16.2 Multiple Range Scale (Class III or single range scale Class I and II with variable interval)

The multiple range scale is a scale with two or more weighing ranges with different maximum capacities and scale intervals. There is only one load receptor, with each range covering zero to its maximum capacity. With [Range mode] = [Multiple range], the scale has up to three ranges with different resolution.

The weight display header includes the current range (R1, R2, and R3), Max, Min, and d (or e with instruments used in legal metrology) (Example: multiple range scale in range 2):

WP A	R2	Max	2000 kg	d=	
		Min	40 kg	e=	2 kg

The switch points [Range limit 1] and [Range limit 2] are the range limits. As soon as the gross weight exceeds range 1, the next highest range with the next highest interval becomes valid (1->2->5->10->20->50). When reducing the weight, the interval of the previous range is kept. When the gross weight is  $\leq 0.25$  d of range 1 and the scale is stable and not tared, the scale returns to range 1 with the corresponding interval.

### Example

Range mode: Multiple range

Range 1: 0...1000 g (when calibrating set scale interval: 0.1 g)

Range 2: 0...2000 g (next highest scale interval: 0.2 g)

Range 3: 0...3000 g (next highest scale interval: 0.5 g)

WP-A	Max	3000g	d=	0.1g
→0← ►			0.0	g
<b>.</b>	Weig	hing point		@admin
Zerotrack	time			1.0 s
Overload				50 d
Minimum w	eight			20 d
🛛 Range mode	2		mul	tiple range
Range limit	1			1000.0 g
Range limit	2	127		2000.0 g
Default				Save

- Go to [System setup]-[Weighing point]-[Weighing point A]-[Parameters]-[W&M] and choose 'Range mode'.
- Select and confirm 'multiple range'.
- Set the switch point from range 1 to 2: enter '1000.0 g' for range limit 1.
- Set the switch point from range 2 to 3: enter '2000.0 g' for range limit 2.
- Save the settings.

### 5.11.16.3 Multi-interval Scale (Class III or single range scale Class I and II with variable interval)

The multi-interval scale is a scale with a weighing range that is divided into intervals. Each interval range has a different scale interval, where the weighing range is automatically switched depending on the load on the scale and also when the load is placed on/removed from the scale.

When [Range mode] = [Multi-interval], the scale has up to three ranges with different resolution. The weight display header includes the current interval range (R1, R2, or R3), Max, Min, and d (or e with instruments used in legal metrology) (Example: multi-interval scale in range 2):

WP-A	R2	Max	2000 kg	d=	
		Min	40 kg	e=	2 kg

The parameters [Range limit 1] and [Range limit 2] are the interval ranges. As soon as the gross weight exceeds range 1, the next highest range with the next highest interval becomes valid (1->2->5->10->20->50).

Note	During calibration, the multi-interval function is always switched off.
------	---

### Example

Range mode: Multi-interval

Interval range 1: 0...1500 g (when calibrating set scale interval: 0.1 g)

Interval range 2: 1500...2900 g (next highest scale interval: 0.2 g)

WP-A	Max	3000g	d=	0.1g
→0← ►			0.0	) g
	Weig	hing point		@admin
Zerotrack	time			1.0 s
Overload				50 d
Minimum w	eight			20 d
Range mod	2		m	ulti-interval
Range limit				1500.0 g
Range limit	2	1		2900.0 g
Default				Save

- Go to [System setup]-[Weighing point]-[Weighing point A]-[Parameters]-[W&M] and choose 'Range mode'.
- Select and confirm 'multi-interval'.
- Set interval range 1: enter '1500.0 g' for range limit 1.
- Set interval range 2: enter '2900.0 g' for range limit 2.
- Save the settings.

# 5.12 Configuring a xBPI Scale

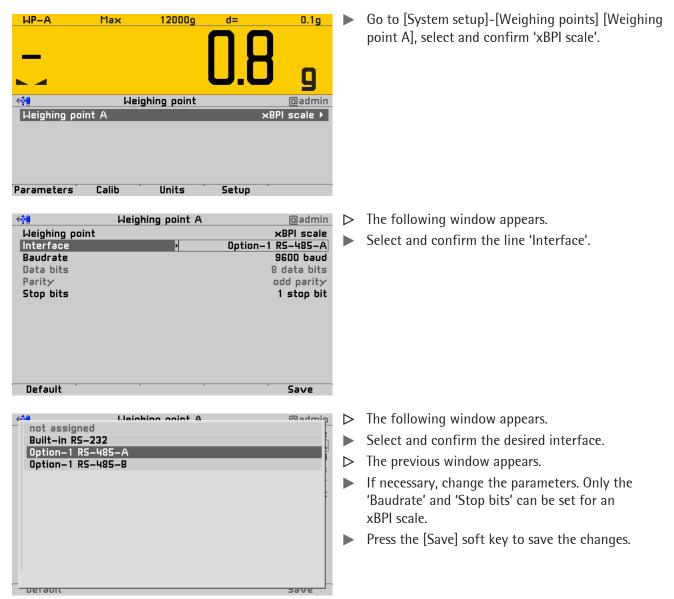

# 5.12.1 General Information

The PR 5500 can communicate with scales (e.g., Combics1) or weighing modules via the xBPI protocol. The scale can be connected via serial interface (PR 5500/04; see Chapter 4.4.1). Communication is serial.

Note It's possible to use the internal weighing point or an IS platform without external power supply.

The determination and transmission of weight depends strongly on the scale/weighing module. Weight values up to seven digits plus preceding +/- sign can be displayed. The maximum capacity (Max) must be set in the scale or already set for a platform and cannot be changed via the xBPI protocol.

### 5.12.3 xBPI Parameter Input for Scale Function

The following parameters must be entered for this menu item:

- Timeout for tare function depending on the application
- SBN address for each xBPI scale, if bus operation is active
- Serial number of xBPI scale or weighing module, if used in legal metrology

WP-A	Max	12000g	d=	0.1g

# 5.12.6 xBPI Calibration with the User Weight

### Requirements

- The xBPI protocol has been selected (see Chapter 5.12.2). \_
- The 'xBPI scale' weighing point has been selected.
- The platform has been set up (see Chapter 5.12.4). \_
- In menu [Weighing point A] 'manual' is set under [Configuration]-[Weighing parameters]-[Confirming adjustment] (see page 187).
- The communication between the device and platform is active. \_

#### Procedure

### **Deleting the Dead Load**

- Remove the weight from the scale.
- Select and confirm [Delete] using the cursor.

The stored dead load is deleted. The current dead load is shown on the weight display.

Select and confirm [Adjust with user weight] using the cursor.

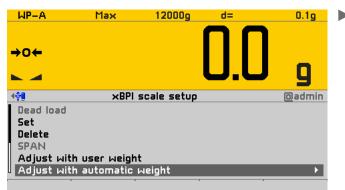

WP-A Max 12000g d= 0.1g	An input window appears. The previously stored user weight is displayed.

# 5.12.7 xBPI Calibration with Automatic Weight Detection

### Requirements

- The xBPI protocol has been selected (see Chapter 5.12.2).
- The 'xBPI scale' weighing point has been selected.
- The platform has been set up (see Chapter 5.12.4).
- In menu [Weighing point A] 'manual' is set under
   [Configuration]-[Weighing parameters]-[Confirming adjustment] (see page 187).
- The communication between the device and platform is active.

### Procedure

 Select and confirm [Adjust with automatic weight] using the cursor.

- The calibration process is carried out without a weight. The calibration status is displayed.
- $\triangleright$  The value is specified automatically.

In this example, a weight of 10 kg is put onto the scale.

- The following window is displayed after applying the weight.
- The deviation is displayed in the last line with increased resolution (10-fold).
- Press the [Accept] soft key.

# 5.13 Setting the SBI Scale

### 5.13.1 General Information

The PR 5500 can communicate with scales (e.g., Combics1) or weighing modules via the SBI protocol. The scale can be connected via serial interface (PR 5500/04; see Chapter 4.4.1). Communication is serial. There are no variables or digital I/Os for external scales in the SPM of the PR 5500.

# 5.13.2 Parameter for Serial Interface

▶ Go to [System setup]-[Weighing points] [Weighing point A], select and confirm 'SBI scale'.

	Weighing point A	@admin	
Weighing point	•	SBI scale	
Interface		Option-1 RS-485-A

# 5.14 Calibrating Digital Weighbridge Load Cell ,Pendeo® Truck'

# 5.14.1 General Information

The digital load cells have been calibrated at the factory based on the acceleration of gravity at Hamburg, Germany: 9.81379 m/s<sup>2</sup>. The calibration data in the load cells are invariable. The calibration data for the gravity acceleration at the place of installation can be adapted only in the instrument and protected against overwriting (see Chapter 5.1.5). With applications for use in legal metrology, the legal requirements and the conditions given on the test/approval certificate must be taken into account when selecting the settings.

# 5.14.2 Parameter Input for Serial Interface

WP-A		100t 0.5 hing point Units	d= 17	0.001t t @admin eo Truck >	Go to [System setup]-[Weighing points] [Weighing point A], select and confirm 'Pendeo Truck'.

# 5.14.3 Calibration Sequence

During calibration, no data is changed in the digital load cells. The calibration data and parameters are saved in the instrument. The unique serial numbers of the connected load cells are monitored. The number of platforms greatly influences how calibration is carried out.

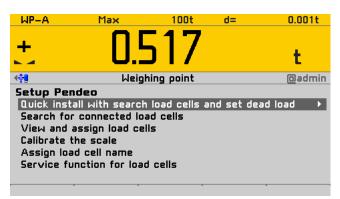

For the adjustment is the following order specified:

- Search for load cells and set dead load, see Chapter 5.14.4 or
- only search for load cells, see Chapter 5.14.5
- Assign load cells, see Chapter 5.14.6
- Calibrate 'New': Max with weight unit, scale interval, dead load, calibration weight, see Chapter 5.14.7
- Carry out a corner correction if necessary, see Chapter 5.14.10

**Note** For further information about calibrating weighing points, see Chapter 5.11.

# 5.14.4 Search for load cells and set dead load

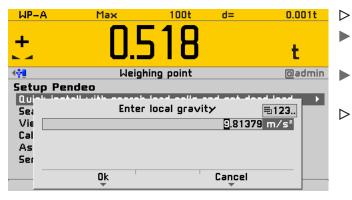

Access the menu as follows: [System setup]-[Weighing point]-[Weighing point A]-[Calib].

- ► Unload the scale.
  - Select and confirm the first menu item.

- $\triangleright$  A prompt window appears.
- Press the [Continue] soft key to start the search process.
- Press the [Cancel] soft key to return to the Pendeo setup menu.

An input window appears.

- Change the default value, if necessary and press the [Ok] soft key, um die Eingabe zu bestätigen.
- Press the [Cancel] soft key, if necessary to return to the Pendeo setup menu.
- ▷ Search process is started and dead load is set.

#### 5.14.8 Assign Load Cell Name

In this menu the load cells can also be assigned names in addition to the LC no. and serial numbers. Access the Pendeo setup menu as follows: [System setup]-[Weighing point]-[Weighing point A]-[Calib].

Select and confirm the menu item 'Assign load cell name'.

- $\triangleright$  An input window appears.
- Select the line, enter the name using the keyboard and confirm.
- ▶ Repeat these steps for load cells 2-4.
- ▶ Press the [Save] soft key to save the entries.

### 5.14.9 Service Function

In this menu faulty load cells can be deactivated and replaced load cells activated. Access the Pendeo setup menu as follows: [System setup]-[Weighing point]-[Weighing point A]-[Calib].

	O.OOO Weighing point		t @admin

 $\triangleright$  A search process is started.

 $\triangleright$  Only then the new load cell is detected.

#### 5.14.10 Corner Correction

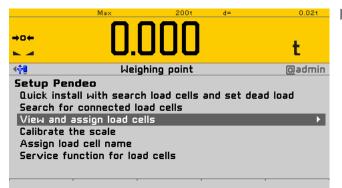

## 5.14.10.1 Checking Corner Load (Dead Load)

After assignment and calibration, the load cell positions have been defined clearly.

#### 5.14.10.2 Mechanical Corner Correction

A mechanical corner correction must carry out if the load on the load cells is not evenly distributed, e.g when the platform wobbles. Now the individual dead load on the load cells can be corrected using shims. If two coupled platforms are connected, corner load checking or installation of shims for the platforms must be performed independently.

Access the Pendeo setup menu as follows: [System setup]-[Weighing point]-[Weighing point A]-[Calib].

Select and confirm the menu item 'View and assign load cells'.

+0 <b>←</b>	0.00	]0	t
<b>. 4∲]</b>	View	1	@admin
LC 1		201	1.159 t
LC 2		202	2.125 t
LC 3		203	1.141 t
LC 4		204	1.364 t
Info	Assign	by name	Accept

- The load cells are displayed with their item number, serial number, and load.
- In this example, the load on a load cell doesn't need to be increased by a shim.
- A fine correction can be conducted with a software corner correction, see Chapter 5.14.10.3.
- Press the ESC/EXIT key to return to the previous window.

#### 5.14.10.3 Software Corner Correction

If the corners are loaded in succession, the same value should be displayed on the device at all times. An excessive deviation almost always means that the scale is tilted or indicates load cell force shunts.

If the signal deviations cannot be resolved by carefully leveling the scale, the software must be calibrated.

0.02t

Access the menu as follows:

[System setup]-[Weighing point]-[Weighing point A]-[Calib]-[Calibrate the scale]-[Modify].

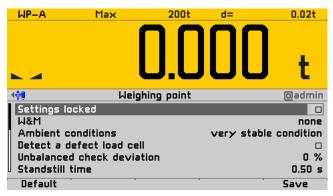

1	U.UZU	t	Press

Platform 1		Save	

- Select 'Corner correction'.
- Press the [Platform 1] soft key.

- Set the calibration weight on a corner.
- The position (in this case, LC 1) is selected.
- Confirm the position.
- Remove the calibration weight.
- Repeat these steps for the remaining load cells in any desired order.
- If all load cells have been loaded one time, press the [Calc] soft key to carry out corner correction.

- The total weight remains unchanged. Only the effect of the individual load cells is corrected.
- When corner correction is completed, it is marked with 'correction ok'.
- Press the [Save] soft key to save the corner correction.

#### 5.14.11 Parameter input

Access the menu as follows: [System setup]-[Weighing point]-[Weighing point A]-[Param].

#### [Settings locked]

The weighing point settings and assignment can only be viewed as if the corresponding CAL switch were closed; see Chapter 5.1.5.2.

#### [M&W]

Setting for operation in legal metrology. Select [none], OIML, NTEP (for USA) or NSC (for Australia); see Chapter 5.11.16.1.

#### [Ambient conditions]

This parameter is used to define the ambient conditions of the scale.

Possible values: very stable condition, Stable condition, Unstable condition, Very unstable condition

#### [Detect a defect load cell]

Select this parameter and confirm if max. simulation of a faulty load cell should be automatic. A warning symbol is displayed for the duration of the load cell simulation.

#### [Unbalanced check deviation]

The plausibility check is activated when the average deviation is >0%.

The average deviation of the individual load cells is calculated. The process is displayed using a symbol above the weight unit.

Setting range: 0-100%

#### [Standstill time]

The parameters [Standstill time] and [Standstill range] can be used to define the stability of the scale (stable balance).

The [Standstill time] parameter is entered in seconds. The permitted range is 0.00-2 s.

The time can be entered from 0.00 to 2.00 seconds, but makes up at least one measurement time.

WP-A	Max	200t	d=	0.02t
		0.0		] <sub>t</sub>
- <b>4∲</b> ¶	Weig	hing point		@admin
Standstill ra	ange	1		1.00 d
Tare timeo	Jt			2.5 s
Zeroset rai	nge			50.00 d
Zerotrack				Yes
Zerotrack (	ange			0.25 d
Zerotrack s	step			0.25 d
Default				Save

#### [Standstill range]

As long as the weight fluctuations remain within this range, the device is determined to be stable.

The [Standstill range] parameter is entered in "d." The permitted range is 0.01-10.00 d.

# [Tare timeout]

Timeout for a tare/zeroset command that cannot be executed (e.g., due to mechanical instability of the scale, incorrect filter setting, resolution too high, standstill condition too strict).

This parameter is given in seconds. The permitted range is 0.0-<2.5>-25 s.

At 0.0 s taring is only carried out when the scale is already stable.

#### [Zeroset range]

Determine a ±range around the zero point determined by the dead load during calibration; within this range

- the displayed gross weight can be set to zero by pressing the zero-setting key (or by a corresponding external command), and
- automatic zero tracking is active.

Setting range: 0.00-10000.00 d

#### [Zerotrack]

The zero display is automatically maintained within set limits.

Possible values: no/yes

When "No" is selected, the next three parameters are not shown.

When "Yes" is selected values for the next three parameters must be entered.

#### [Zerotrack range]

Range within which the automatic zerotrack is balanced. Setting range: 0.25-10000.00 d

#### [Zerotrack step]

If a weight change exceeds the adjusted value, automatic tracking does not function any more. Setting range for automatic tracking increments: 0.25... 10 d

WP-A	Max	200t	d=	0.02t
		0.0		] <sub>t</sub>
	Weig	hing point		@admin
Zerotrack	time	1		1.0 s
Overload				9 d
Minimum 🖌	veight			20 d
Range mod	le			single range
Default				Save

## [Zerotrack time]

Time interval for automatic zero tracking. Setting range: 0.0-25 s At 0.0 s the tracking is switched off.

### [Overload]

Weighing range above the maximum capacity (Max) without error message. Setting range: 0-99999999 d.

#### [Minimum weight]

Minimum weight at which a print command can be triggered. Setting range: 0-9999999 d.

#### [Range mode]

Possible values: single range, multiple range, multi-interval. For scale range selection, see Chapter 5.11.16.2.

#### [Default]

Settings are reset to factory settings.

#### [Save]

The settings are saved.

#### 5.14.12 Subsequent Dead Load Correction

If the platform weight changes by an amount that is higher than the zero-setting range, e.g., due to dead load reduction, dead load increase, or mechanical changes, the functions for automatic zero tracking and manual zero setting no longer work.

If the entire zero-setting range is already utilized, you can still correct the dead load without affecting other calibration data/parameters.

Access the menu as follows:

[System setup]-[Weighing point]-[Weighing point A]-[Calib]-[Calibrate the scale]-[Modify].

WP-A	Max	200t	d=	0.02t
	0.	000		t

Platform 1		by load	by valu	ie Save

The scale must be empty (deck installed on a vehicle scale, no load).

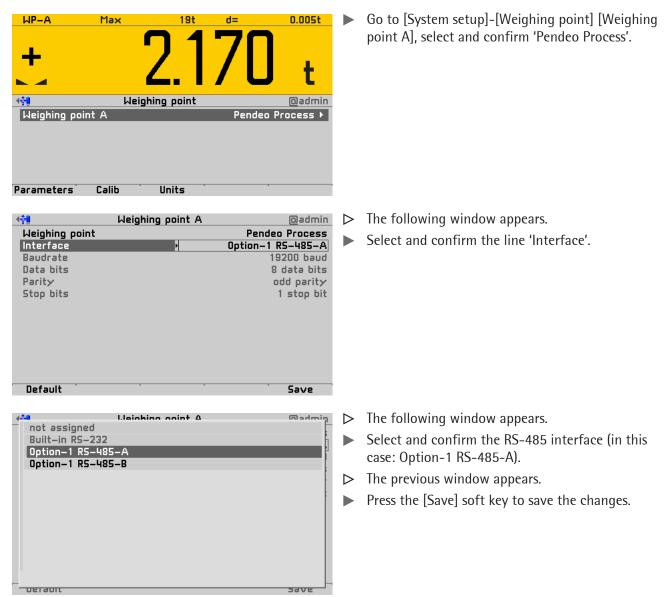

- Select 'Dead load'.
- Confirm the dead load ( $\sum$  corner load).
- Check the corner load, see Chapter 5.14.10.1.
- Carry out a corner correction if necessary, see Chapter 5.14.10.
- Press the [Save] soft key to save the current dead load.

# 5.15 Calibrating Digital Precision Compression Load Cell 'Pendeo® Process'

#### 5.15.1 General Information

The digital load cells have been calibrated at the factory based on the acceleration of gravity at Hamburg, Germany: 9.81379 m/s<sup>2</sup>. The calibration data in the load cells are invariable. The calibration data for the gravity acceleration at the place of installation can be adapted only in the instrument and protected against overwriting (see Chapter 5.1.5). With applications for use in legal metrology, the legal requirements and the conditions given on the test/approval certificate must be taken into account when selecting the settings.

#### 5.15.2 Parameter Input for Serial Interface

#### 5.15.3 Calibration Sequence

During calibration, no data is changed in the digital load cells. The calibration data and parameters are saved in the instrument. The unique serial numbers of the connected load cells are monitored.

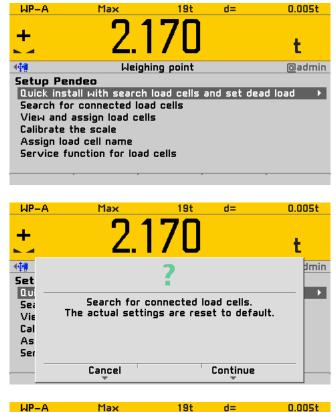

For the adjustment is the following order specified:

- Search for load cells and set dead load, see Chapter 5.15.4 or
- only search for load cells, see Chapter 5.15.5
- Assign load cells, see Chapter 5.15.6
- Calibrate 'New': Max with weight unit, scale interval, dead load, calibration weight, see Chapter 5.15.7

Note For further information about calibrating weighing points, see Chapter 5.11.

#### 5.15.4 Search for load cells and set dead load

Access the menu as follows: [System setup]-[Weighing point] [Weighing point A]-[Calib].

Unload the scale.

- A prompt window appears.
- Press the [Continue] soft key to start the search process.

Select and confirm the first menu item.

Or

- Press the [Cancel] soft key to return to the Pendeo setup menu.

▷ After determining the Pendeo setup menu appears.

#### 5.15.6 View and Assign Load Cells

The load cells (serial number) can be assigned to the place of installation in this menu. This is important for correcting the dead load (distribution to the individual load cells), for corner correction and in the event of load cell replacement.

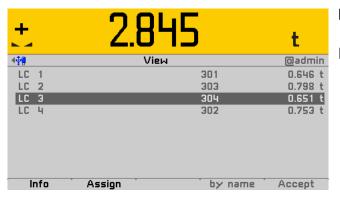

Note The assignment from the installation should be documented in the case of load cells being replaced.

Access the Pendeo setup menu as follows: [System setup]-[Weighing point] [Weighing point A]-[Calib]-[View].

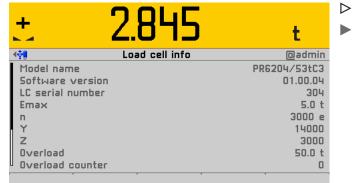

Select and confirm the menu item 'View and assign load cells'.

#### 5.15.6.1 View Load Cells

- ▷ The load cells are displayed with their item number, serial number, and load.
- Select the desired line, if necessary and press the [Info] soft key, to display the load cell data.

Note	If load cell names have been assigned (see Chapter 5.18.9), the view can be switched with
	the soft key [by name].

- ▷ The following window appears.
  - Press the ESC/EXIT key to return to the previous window.

#### 5.15.6.2 Assign Load Cells

LC 4	304	0.648 t	0.648 t ⊠
	· · ·	Accept	

 $\triangleright$  Only then the new load cell is detected.

#### 5.15.10 Corner Correction

#### 5.15.10.1 General Information

An asymmetric scale construction doesn't need a corner correction.

But the corner correction may be necessary at a symmetric scale construction.

#### 5.15.10.2 Checking Corner Load (Dead Load)

After assignment and calibration, the load cell positions have been defined clearly.

#### 5.15.10.3 Software Corner Correction

If the corners are loaded in succession, the same value should be displayed on the device at all times. An excessive deviation almost always means that the scale is tilted or indicates load cell force shunts.

If the signal deviations cannot be resolved by carefully leveling the scale, the software must be calibrated.

0.444 t 🗵

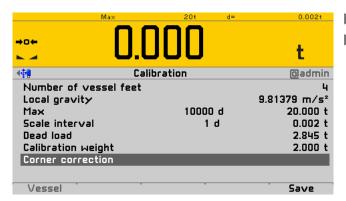

0.698 t 🗹

0.558 t 🗵

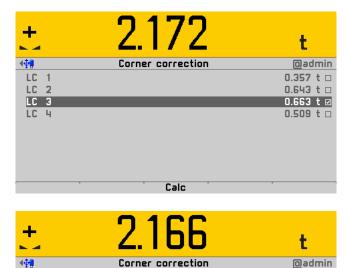

0.467 t 🗵

Access the menu as follows:

[System setup]-[Weighing point] [Weighing point A]-[Calib]-[Calibrate the scale]-[Modify].

- Select 'Corner correction'.
- Press the [Vessel] soft key.

Calc

- Set the calibration weight on a corner. ►
- The position (in this case, LC 3) is selected.
- Confirm the position.
- Remove the calibration weight.
- Repeat these steps for load cells 2-4 in any ► desired order
- If all load cells have been loaded one time, press the [Calc] soft key to carry out corner correction.

LC

LC 3

Vessel				Save

- ▷ The total weight remains unchanged. Only the effect of the individual load cells is corrected.
- When corner correction is completed, it is marked with 'correction ok'.
- Press the [Save] soft key to save the corner correction.

#### 5.15.11 Parameter input

Access the menu as follows: [System setup]-[Weighing point] [Weighing point A]-[Param].

#### [Settings locked]

The weighing point settings and assignment can only be viewed as if the corresponding CAL switch were closed; see Chapter 5.1.5.2.

#### [M&W]

Setting for operation in legal metrology. Select [none], OIML, NTEP (for USA) or NSC (for Australia); see Chapter 5.11.16.1.

#### [Ambient conditions]

This parameter is used to define the ambient conditions of the scale.

Possible values: very stable condition, Stable condition, Unstable condition, Very unstable condition

#### [Detect a defect load cell]

Select this parameter and confirm if max. simulation of a faulty load cell should be automatic. A warning symbol is displayed for the duration of the load cell simulation.

#### [Unbalanced check deviation]

he plausibility check is activated when the average deviation is >0%.

The average deviation of the individual load cells is calculated. The process is displayed using a symbol above the weight unit.

Setting range: 0–100%

#### [Standstill time]

The parameters [Standstill time] and [Standstill range] can be used to define the stability of the scale (stable balance).

The [Standstill time] parameter is entered in seconds. The permitted range is 0.00-2 s.

The time can be entered from 0.00 to 2.00 seconds, but makes up at least one measurement time.

WP-A	Max	20t	d=	0.002t
	(	].0		] <sub>t</sub>
<b>.</b> ∢ <b>∲</b> ¶	Weigh	ing point		@admin
Standstill r	ange	1		1.00 d
Tare timed	out			2.5 s
Zeroset ra	nge			50.00 d
Zerotrack				Yes
Zerotrack	range			0.25 d
Zerotrack	step			0.25 d
Default				Save

#### [Standstill range]

As long as the weight fluctuations remain within this range, the device is determined to be stable.

The [Standstill range] parameter is entered in "d." The permitted range is 0.01-10.00 d.

### [Tare timeout]

Timeout for a tare/zeroset command that cannot be executed (e.g., due to mechanical instability of the scale, incorrect filter setting, resolution too high, standstill condition too strict).

This parameter is given in seconds. The permitted range is 0.0-<2.5>-25 s.

At 0.0 s taring is only carried out when the scale is already stable.

#### [Zeroset range]

Determine a ±range around the zero point determined by the dead load during calibration; within this range

- the displayed gross weight can be set to zero by pressing the zero-setting key (or by a corresponding external command), and
- automatic zero tracking is active.

Setting range: 0.00-10000.00 d

#### [Zerotrack]

The zero display is automatically maintained within set limits.

Possible values: no/yes

When "No" is selected, the next three parameters are not shown.

When "Yes" is selected values for the next three parameters must be entered.

#### [Zerotrack range]

Range within which the automatic zerotrack is balanced. Setting range: 0.25-10000.00 d

#### [Zerotrack step]

If a weight change exceeds the adjusted value, automatic tracking does not function any more. Setting range for automatic tracking increments: 0.25-10 d

WP-A	Max	20t	d=	0.002t
	(	].()		] <sub>t</sub>
<b>₩</b>	Weighi	ng point		@admin
Zerotrack	time	1		1.0 s
Overload				9 d
🛛 Minimum 🕨	leight			20 d
Range mod	le			single range
Default				Save

#### [Zerotrack time]

Time interval for automatic zero tracking. Setting range: 0.0-25 s At 0.0 s the tracking is switched off.

#### [Overload]

Weighing range above the maximum capacity (Max) without error message. Setting range: 0-9999999 d.

#### [Minimum weight]

Minimum weight at which a print command can be triggered. Setting range: 0-9999999 d.

#### [Range mode]

Possible values: single range, multiple range, multi-interval. For scale range selection, see Chapter 5.11.16.2.

#### [Default]

Settings are reset to factory settings.

#### [Save]

The settings are saved.

#### 5.15.12 Subsequent Dead Load Correction

If the platform weight changes by an amount that is higher than the zero-setting range, e.g., due to dead load reduction, dead load increase, or mechanical changes, the functions for automatic zero tracking and manual zero setting no longer work.

If the entire zero-setting range is already utilized, you can still correct the dead load without affecting other calibration data/parameters.

Access the menu as follows:

[System setup]-[Weighing points]-[Weighing point x]-[Calib]-[Calibrate the scale]-[Modify].

WP-A	Max	20t	d=	0.002t
	0.0	<u> </u>		t
<b>.</b> ∢ <b>‡</b> ¶	Cal	ibration		@admin

Dead load				2.845 t
Calibration 🗸	veight			2.000 t
Corner corre	ection			correction ok
Vessel		by load	by valu	ie Save

The scale must be empty (empty vessel).

- Select 'Dead load'.
- Confirm the dead load.
- Check the corner load, see Chapter 5.15.10.2.
- Carry out a corner correction if necessary, see Chapter 5.15.10.
- Press the [Save] soft key to save the current dead load.

# 5.16 PR-Net Weiging Point

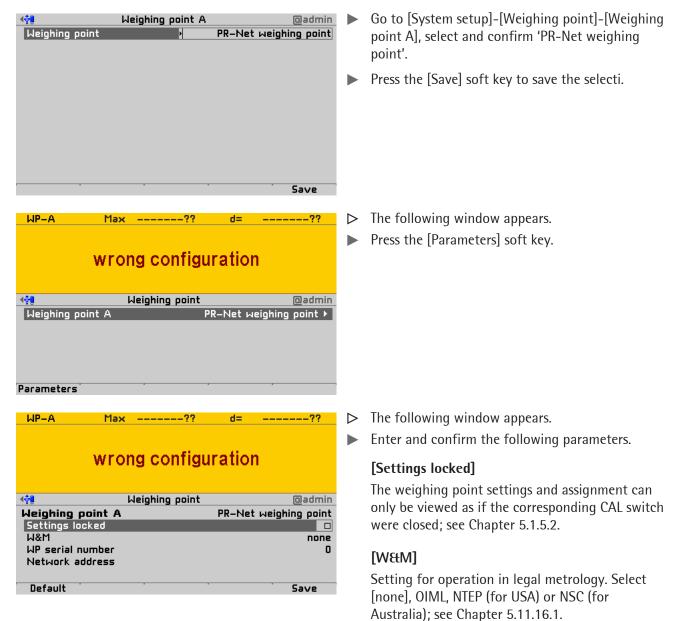

#### 5.16.1 General Information

PR 5500 can communicate with the following indicators via the network protocol:

- PR 5220
- PR 5230
- PR 5410

The determination and transmission of weight depends strongly on the indicators. Weight values up to seven digits plus preceding +/- sign can be displayed. Before the weighing electronics are assigned to the logical weighing point, the scale (e.g., PR 5230 + load cells) must be calibrated and configured accordingly. The calibration cannot be changed via the network protocol.

#### 5.16.2 Parameter Input

#### [WP Serial number]

Serial number of the connected device. With serial number 0, checking is omitted. Setting range: 0...99999999

#### [Network address]

Input:

- IP address of the connected indicator or
- Device name (Host name) of the connected indicator

Note	The entry of a host name assumes that
	<ul> <li>a name server exists on the network, which recognizes the host names of the devices.</li> </ul>
	<ul> <li>On the PR 5500, "use DHCP" is activated under [System setup]-[Network parameters] (otherwise the PR 5500 is not given the address of the name server).</li> </ul>

#### [Default]

Settings are reset to factory settings.

#### [Save]

The settings are saved.

▷ After saving the weight value of the scale is displayed.

# 5.17 Mettler-Scale

#### 5.17.1 General Information

PR 5500 can communicate with the Mettler-Scale via the MT-SICS protocol. The scale can be connected via serial interface. Communication is serial.

The determination and transmission of weight depends strongly on the scale. Weight values up to seven digits plus preceding +/- sign can be displayed. The maximum capacity (Max) is already set in the Mettler scale and cannot be changed via the MT-SICS protocol.

#### 5.17.2 Parameter Input in Mettler-Scale Menu

Example: scale type XS6002SDR

The selection depends on the print file processing: raw, CR/LF translation, EPSON TM-U220, EPSON LQ 300k, Generic PCL5 (Unicode), Generic PCL5 (Codepage), Generic ESC/P2

## [Folder name]

Print file storage location (here: Reports).

The user-defined directory path is subject to the following restrictions:

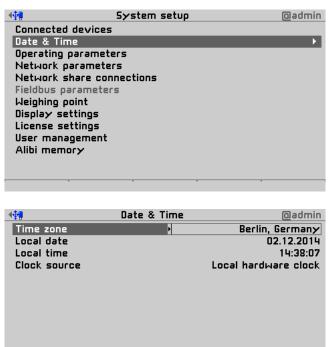

- Max. 128 characters .
- 0-9, A-Z (not case-sensitive) are permitted.
- Must not start with space or "/".
- Must not contain space, "//", "./", " /", ".." and "/ ".
- Must not end with space, "." or "/".
- Must not use "<", ">", ":", "", "/", "/", "/", "/", "!", "?" and "\*".

Input: via keyboard

- Press the [Test print] soft key.
- $\triangleright$  A prompt window appears.
- ▶ Press the [Yes] soft key.
- ▷ A test file is created in the new created folder.
- Check the settings and change if necessary.
- Press the [Save] soft key to save the settings.

## 5.19.2 Setting the Date and Time

The parameters for date and time are set under this menu item.

	Date & Time	@admin
Time zone		Berlin, Germany
Local date		02.12.2014
Local time		14:39:07
Clock source	Þ	Remote NTP
Remote NTP server		0.0.0.0
Last update		00.00.0000-00:00:00
online		
Default	Format	Save

Format

Select and confirm [System setup] - [Date & Time] using the cursor.

- $\triangleright$  A selection window appears.
- Select and confirm the individual parameters.

## [Time zone]

Selection: all existing time zones

#### [Local date]

Can be configured if 'local hardware clock' has been selected under [Clock source]. Input: via keyboard

#### [Local time]

Save

Can be configured if 'local hardware clock' has been selected under [Clock source].

Input: via keyboard

#### [Clock source]

Selection:

local hardware clock, NTP server (Network Time Protocol)

## [NTP server]

The IP address can only be entered if under [Clock source] 'NTP server (Network Time Protocol)' has been selected.

Input: IP address via keyboard

#### [Last update]

Indicates when the last data was received by the NTP server.

## [online]

The checkbox **I** indicates whether the NTP server was successfully contacted during the last attempt.

Default

	Date & Time fo	rmat 🛛 🔍 a	dmin

External keyboard la	ayout English	QWERTY
Input method		by language
Screensaver		after 10 minutes
Keyclick sound		short key click
Coldstart with STOP+EXIT		for 3 seconds
Programming		
Software download		disabled
Label/Language download		disabled
Operational keys		
<sup>11</sup> Keys require logged	in user	
Default	Input test	Save

Select and confirm [System setup] - [Operating parameters] using the cursor.

- $\triangleright$  A selection window appears.
- Select and confirm the individual parameters.

Note	When user management is activated, the settings for the logged-in user remain active.
<b>Display language</b> Selection: (de) Deutsch, <(e	
Note	When user management is activated, the operating language only changes once the currently logged-in user logs out. It is only possible to switch languages immediately using the F1 or F2 key.

### [External keyboard layout]

Selection:

<Englisch QWERTY>, German QWERTZ, French AZERTY, Italian QWERTY, Spanish QWERTY, Russian QWERTY/йцукен

## [Input method]

This function makes it possible to enter Japanese (Hepburn) or Chinese (Pinyin) characters even if the language in question (Japanese or Chinese) is not selected or another language (such as English) has been selected under [Display language].

Selection:

<by language>,

Hepburn (transliteration of Japanese "Hiragana" characters into Latin script), Pinyin (phonetic transliteration based on the Latin alphabet)

🐗 Operating p	parameters	@admin	Input Test for Keyboard and Keypad
Operating Display language External keyboard layout Input method Screensaver Keyclick sound Coldstart with STOP+EXIT Programming Software download Label/Language download Operational keys Keys require logged in use	sh fi	English QWERTY Hepburn r 10 minutes ort key click or 3 seconds enabled enabled	Press the [Input test] soft key to test the entry.

De	Ok T	e	- Lowercase letters

Press the [OK] soft key to end the input test.

## [Screensaver]

Once the screensaver is switched on, operation is only possible once a password has been entered or a key has been pressed.

#### Selection:

[no screensaver], after 1 minute, after 5 minutes, after 10 minutes, after 30 minutes

#### [Keyclick sound]

Duration of acoustic signal when keys are pressed Selection: no key click, <short key click>, medium key click, long key click

#### [Coldstart with STOP+EXIT]

A cold start leads to a loss of all data on the database.

Selection: <disabled>, immediately, 3 s

#### [Software download]

Load and start a new application on the device via the network.

Possible production downtime! This parameter must always be set to "locked" for production systems.

Selection: <disabled>, enabled

Software can only be downloaded in running operation when "enabled" has been selected.

#### [Label/Language download]

Load labels and language files via network temporarily into the device.

Note After a cold sta Loading the lan

After a cold start the files will be lost.

Loading the language files permanently into the device is possible via the update software "FlashIt!" from version 02.73.11.

Selection: <disabled>, enabled

## [Keys require logged in user]

If the checkbox  $\blacksquare$  is ticked, the keys with weighing point functions (e.g. Set zero; F1 and F2, if configurated for weighing point functions) are locked for users who are not logged in.

	Operating parameters	@admin
Operating		
Tare key	<u>&gt;</u>	set tare & reset tare
Set zero key		only when not tared
F1 key		Change language
F2 key		Toggle weight unit
Default	Input test	Save

# [Tare key]

The function of the tare key  $\rightarrow T \leftarrow$  can be configured.

Selection:

disabled, <set tare & reset tare>, set tare & set tare again

'Disabled' means that the key has no function.

'Set tare & reset tare' means that the device will be tared if it has not been tared previously and the tare will be reset if the device has already been tared.

'Set tare & set tare again' means that each time a key is pressed, the instant value in the tare memory is applied and the net display switches to 0.

# [Set zero key]

The function of the set zero key  $\rightarrow 0^{\leftarrow}$  can be configured.

Selection:

disabled, <only when not tared>, reset tare on zero set

'Disabled' means that the set zero key on the keypad has no function.

The key's function can be limited to gross mode with 'only when not tared' or switched automatically to gross mode with 'reset tare on zero set'.

If the zero-setting key with these settings has no effect, the configured zero-setting range (around the zero-point set with the dead load) is already utilized due to a previous zero-setting operation and/or automatic zero setting (see Chapter 5.11.16).

# [F1 key], [F2 key]

Selection:

no function, Change language, Change user, Lock device, Toggle weight unit, Set tare, Reset tare, set tare & reset tare, set tare & zero set, Analog test, Show 10-fold resolution

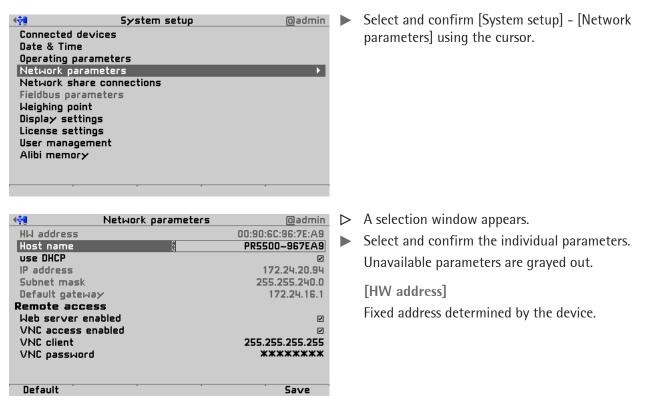

Note Weighing point functions are only active when the weight display is switched on.

Selection	Function	
No function	The key has no function.	
Change language	The menus are displayed immediately in the selected language.	
Change user	The login window opens on the display.	
Lock device	This function is only possible, if the user management has been activated.	
Toggle weight unit	Can be switched between display units (see Chapter 5.11.15). This function is only possible if at least two units have been selected.	
Set tare	The current gross weight is stored in the tare memory.	
Reset tare	Switching to gross mode.	
Set tare & reset tare	The device will be tared if it has not been tared previously and the tare will be reset if the device has already been tared.	
Set tare & zero set	The device will be tared if it has not been tared previously and display will be set to 0.	
Analog test	Can be used to test the selected analog weighing point only when the current weight is displayed.	
Show 10-fold resolution	The weight value is displayed for a brief time at an increased resolution (10-fold).	

Press the [Save] soft key to save the settings.

## 5.19.4 Network Parameters

The network parameters are set under this menu item.

#### [Device name (hostname)]

#### Caution!

#### The device name must be unique in the network!

The user-defined device name is subject to the following restrictions:

- Minimum amount of characters: 2, maximum amount of characters: 24.
- The first character must be a letter. Spaces are not permitted.
- 0-9, A-Z (not case-sensitive) are permitted.
- - or . may be included, but not at the end nor one after the other.

#### Input: via keyboard

#### [use DHCP]

If the checkbox  $\blacksquare$  is ticked (presetting: DHCP selected), the server automatically allocates the IP address, subnet mask, and default gateway.

If the checkbox is not ticked, the settings for the 'IP address', 'Subnet mask', and 'Default gateway' must be defined in conjunction with the responsible system administrator.

	Network parameters	@admin
HW address		00:90:6C:96:7E:A9
Host name		PR5500-967EA9
use DHCP		
IP address		172.24.20.94
Subnet mask		255.255.240.0
Default gatew	ах	172.24.16.1

Web server ei		
VNC access e	nabled	
VNC client		255.255.255.255
VNC passwore	9	******
Default	•	Save

## [Web server enabled]

If the checkbox  $\checkmark$  is ticked, the device website can be used.

#### [VNC access enabled]

If the checkbox  $\blacksquare$  is ticked, the device can be operated via VNC.

## [VNC client]

This address can be used to allow access to the interface; see following table.

#### [VNC password]

If a password in entered (max. 8 characters), this password must be entered in the VNC client to access the interface.

▶ Press the [Save] soft key to save the settings.

VNC client	172.24.21.101	
VNC client	172.24.21.255	
VNC client	255.255.255.255	

Access only from client machine with this address. Access from any client with address within range 172.24.21.1 - ..254. Access from client with any address.

# [Default]

- resets the host name to PR5500-XXXXXX, where XXXXXX stands for the last 3 bytes of the hardware address (MAC ID).
- sets [use DHCP] to active.
- sets the IP address to 0.0.0.0.
- sets the subnet mask to 0.0.0.0.
- sets the default gateway to 0.0.0.0.
- sets the VNC client to 255.255.255.255.
- resets the VNC password to ,no password'.

## 5.19.5 Network Share Connections

Under this menu item, network share connections are configured and provided for system maintenance (such as data storage/backups on the network).

The following order must be observed without exception:

- 1. One or more directories on the server/notebook/PC must be shared; see the manual for the operating system in question (e.g., Windows 7: click the directory, right-click on ,Advanced Sharing...' and activate the selection ,Share this folder'. Then click ,OK'.)
- 2. On the instrument under [System setup] [Network share connections], configure the connections to the shared directories on the server/notebook/PC.

<b>4</b> ∲ <mark>9</mark>	System setup	@admin

 Select and confirm [Network share connections] using the cursor.

#### 5.19.5.1 Adding a Network Share Connection

Configure network share connections       @admin         No connections configured	<ul> <li>A selection window appears. Here: the list is empty because no connection has been configured.</li> <li>Press the [Add] soft key to configure a new connection.</li> </ul>
Create network share connection       @admin         Connection name       Image: Connection       Image: Connecti	<ul> <li>A selection window appears.</li> <li>Select and confirm the individual parameters.</li> <li>[Connection name] The name must be unique in the network. Input: max. 16 alphanumeric characters</li> <li>[Server] Enter the hostname (see page 260) or IP address.</li> </ul>

## [Share name on server]

The existing name on the server where the directory was created.

Input: max. 64 characters

# [Folder path]

The existing directory path within network sharing (if required).

The user-defined directory path is subject to the following restrictions:

- Max. 128 characters .
- 0-9, A-Z (not case-sensitive) are permitted.
- Must not start with space or "/".
- Must not contain space, "//", "./", " /", ".." and "/ ".
- Must not end with space, "." or "/".
- Must not use "<", ">", ":", "", "/", "/", "/", "]", "?" and "\*".

## Input: via keyboard

## [Domain]

The existing domain for network sharing (if required). Input: max. 64 characters

## [User name]

User name on the network (if required). Input: max. 64 alpha numeric characters

## [Password]

Password on the network (if required). Input: max. 64 alpha numeric characters

Edit network share connection       Definition         Connection name       Reports         Server       XXX.company.com         Share name on server       Office         Fol       Dor         Use       I         Pas       Test passed         Ok       e	<ul> <li>Press the [Test] soft key to test the connection.</li> <li>An info window appears.</li> <li>Press the [OK] soft key to hide the window. # 5.19.5.3 Removing a Network Share Connection

Note	Only the setting is deleted in the instrument.	
	No network share files are deleted.	

Configure network share connections       @admin         Reports       ▶	<ul> <li>Select the appropriate connection using the cursor.</li> <li>Press the [Remove] soft key to delete the connection.</li> </ul>
Add Change Remove	
Configure network share connections @admin	A prompt window appears.
Reports >	Press the corresponding soft key.
Remove network share connection Reports?	

## 5.19.6 Fieldbus Parameters

#### 5.19.6.1 Generell Information

The fieldbus parameters are set under this menu item. This menu item can only be selected if a PR 1721/6x card has been installed in the Option-1/FB slot.

Ve       System setup         Connected devices       Date & Time         Operating parameters       Network parameters         Network share connections       Fieldbus parameters         Fieldbus parameters       Version         Weighing point       Display settings         License settings       User management         Alibi memory       Alibi memory	Select and confirm [System setup] - [Fieldbus parameters] using the cursor.
Ve       Fieldbus parameters         fieldbus protocol       ProfiBus-DP-V1         Vos       8 byte 1/0         Scale interface       WP A         ProfiBus-DP address       3	The protocol displayed automatically depends on the installed fieldbus card (here: ProfiBus-DP-V1): [Profibus-DP] for PR 1721/61, [DeviceNet] for PR 1721/64, [CC-Link] for PR 1721/65, [ProfiNet I/O] for PR 1721/66 and [EtherNet IP] for PR 1721/67. Confirm the first line.
	Confirm the first line.
Default Save	
B byte I/0       16 Byte I/0       24 Byte I/0       32 Byte I/0       64 Byte I/0	A selection window appears. Select and confirm the desired range using the cursor.
Fieldbus parameters         fieldbus protocol       ProfiBus-DP-V1         I/Os       8 byte I/O         Scale interface       MP A         ProfiBus-DP address       3         Default       Save	Select and confirm "Scale interface" using the cursor.

<b>√</b> Ω	Fieldhue opromotore
disabled	
WP A	
WP A, B	h
WP A, B, C	2
WP A, B, C, D	
	save
	5000

#### $\triangleright$ A selection window appears.

Select and confirm the desired line using the cursor.

If 'disabled' is selected, no weight values or statuses can be transmitted.

Only for application programmers who want to use the entire range.

If 'WP A' has been selected, e. g. 32 bytes can be selected under 'I/As' nevertheless. However, the first 8 bytes are used by WP A.

## [Fieldbus address]

The input is dependent on the respective fieldbus.

▶ Press the [Save] soft key to save the settings.

## 5.19.6.2 ProfiBus-DP Settings for S7

#### Requirements

- The PR 1721/61 ProfiBus-DP fieldbus card is installed; see Chapter 4.4.8.
- The parameters have been selected and saved according to the weighing points (1x WP = 8 byte I/O); see Chapter 5.19.6.1.

#### Procedure

- ▶ Establish communication with the PLC (in this case: SIEMENS S7-300/400).
- Create/open a project in the SIMATIC MANAGER.
- ▶ Under ,HW config. > Tools > Install GSD files', load the file ,SART\_5500.gsd' from the CD.
- ▷ This file appears under profile -> ... as ,PR 5500 Process Controller'.
- Select the appropriate modules (I/O size consistent) here according to the device configuration.
- Find the access addresses in the relevant application manual (Chapter ,Description of the I/O Area').
   Example: The gross weight should be read for weighing point WP A.
   I/O size = 8 bytes, counted from byte 0–7

## Card Test

The fieldbus card has 2 LEDs (OP, ST). Communication is functioning correctly when the LEDs are green (see Chapter 4.4.8.

All inputs and outputs are displayed under [System maintenance] - [Test hardware] - [I/O card test] - [Option-FB PR 1721/61].

**Note** Further details can be found in the supplementary application manual ,How to...' (available upon request from Technical.Support@Sartorius.com).

## 5.19.6.3 DeviceNet Settings for Rockwell Workstation

#### Requirements

- The PR 1721/64 DeviceNet fieldbus card is installed; see Chapter 4.4.9.
- The parameters have been selected and saved according to the weighing points (1x WP = 8 byte I/O); see Chapter 5.19.6.1.

## Procedure

- Establish communication with the workstation in the ,RSLinx' program (initial ser.DF1, recommended ETH-LAN).
- ▶ Register the file ,sag\_5500\_DVN.EDS' in the ,RSNetWorx for DeviceNet' program.
- Add a database entry in the hardware window under [Vendor] [Sartorius Mechatronics T&H GmbH] [Communications Adapter]:
  - Drag ,Scanner 1769 SDN' to ,Graph' and enter slot number (e.g., 3).
  - Drag ,MAXXIS Device' to ,Graph' and apply the MAC ID specified on the instrument.
- Start the ,RSLogix5000' program.
- Create a new project (,New') with a hardware structure according to the hardware components and enter Slot1...n.
- ▶ In III [Backplane] III [CompactBus Local] III [1769-SDN/B], select [Properties Slot(n)].
- ▷ The ,Module Properties Report' window appears.
- Enter values for input size [2/4/6/8] and output size [2/4/6/8] (32-bit) according to the active weighing points (1x WP = 2 x 32-bit = 8 byte I/0).
- ▶ Upload from the workstation to the project newly created with the <RSLogix5000> program.
- ▶ In the <RSLogix5000> program, set the access to ,Online' in <sup>1</sup> [Controller Tags] as [DINT per WP 2 lines with 4 bytes each].
- Additional settings are defined in the application in question, such as phase (see corresponding manual).

#### **Card Test**

The fieldbus card has 2 LEDs (MS, NS). Communication is functioning correctly when the LEDs are green (see Chapter 4.4.9).

All inputs and outputs are displayed under [System maintenance] - [Test hardware] - [I/O card test] - [Option-FB PR 1721/64].

Note	Further details can be found in the supplementary application manual ,How to' (available
	upon request from Technical.Support@Sartorius.com).
	,RSLinx', ,RSNetWorx', and ,RSLogix5000' are products of Rockwell Automation®.

### 5.19.6.4 ProfiNet I/O Settings for S7

#### Requirements

- The PR 1721/66 ProfiNet I/O fieldbus card is installed; see Chapter 4.4.11.
- The parameters have been selected and saved according to the weighing points (1x WP = 8 byte I/O); see Chapter 5.19.6.1.

## Procedure

Establish communication with the PLC (in this case: SIEMENS S7-300/400).

Attention!	A unique device name must be assigned for the hardware configuration and assignment/
	download.

There are two options:

- CPU with ProfiNet port (here: CPU1511-1PN), direct access
  - Under ,Network > Available consumers', assign the device names under the detected devices and select ,Download'.
- Communication Processor (here: CP343-1)

Data is accessed via the function code ,FC11PN I-O send' and ,FC12PN I-O receive'.

- Select ,Available consumers' under ,CP343-1 > PLC > Ethernet > Edit Ethernet Mode > Browse'.
- Select device ,PR 5500', assign the device name, and select ,Download'.
- ► Create/open a project in the ,SIMATIC MANAGER'.
- Under ,HW config. > Tools > Install HTML files', load the file ,GSDML-xxx-Sartorius-PR5500-xxx.html' from the CD.
- ▷ This file appears under profile -> ... as ,PR 5500 Process Controller'.
- Select the appropriate modules (I/O size consistent) here according to the device configuration.
- Find the access addresses in the relevant application manual (Chapter ,Description of the I/O Area').
   Example: The gross weight should be read for weighing point WP A.
   I/O size = 8 bytes, counted from byte 0–7

## **Card Test**

The fieldbus card has 3 LEDs (MS, Link, NS). Communication is functioning correctly when the LEDs are green (see Chapter 4.4.11).

All inputs and outputs are displayed under [System maintenance] - [Test hardware] - [I/O card test] - [Option-FB PR 1721/66].

**Note** Further details can be found in the supplementary application manual ,How to...' (available upon request from Technical.Support@Sartorius.com).

## 5.19.6.5 EtherNet IP Settings for Rockwell Workstation

#### Requirements

- The PR 1721/67 EtherNet-IP fieldbus card is installed; see Chapter 4.4.12.
- The parameters have been selected and saved; see Chapter 5.19.6.1.

### Procedure

- Establish communication with the workstation in the ,RSLinx' program (initial ser.DF1, recommended ETH-LAN).
- ▶ Register the file ,sag\_5500\_ETH.EDS' in the ,RSNetWorx for EtherNetIP' program.
- Add a database entry in the hardware window under [Vendor] [Sartorius Mechatronics T&H GmbH] [Communications Adapter]:
   Drag ,MAXXIS Device' to ,Graph' and apply the ETHIP address specified on the instrument.
- Start the ,RSLogix5000' program.
- ▶ Upload from the workstation to the project newly created with the <RSLogix5000> program.
- ▶ In the <RSLogix5000> program, set the access to ,Online' in [Controller Tags] as [DINT per WP 2 lines with 4 bytes each].
- Additional settings are defined in the application in question, such as phase (see corresponding manual).

## **Card Test**

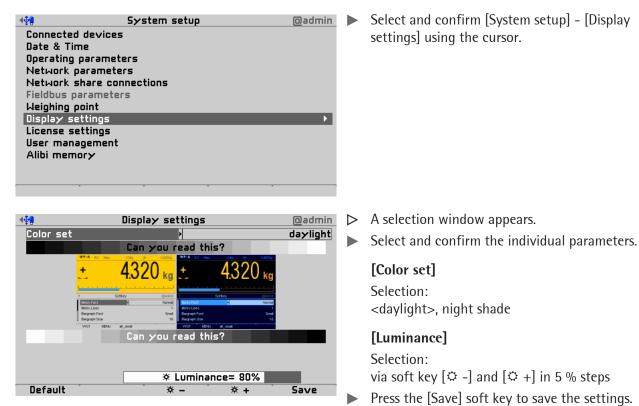

The fieldbus card has 3 LEDs (MS, Link, NS). Communication is functioning correctly when the LEDs are green (see Chapter 4.4.12).

All inputs and outputs are displayed under [System maintenance] - [Test hardware] - [I/O card test] - [Option-FB PR 1721/67].

Note Further details can be found in the supplementary application manual ,How to...' (available upon request from Technical.Support@Sartorius.com). ,RSLinx', ,RSNetWorx', and ,RSLogix5000' are products of Rockwell Automation<sup>®</sup>.

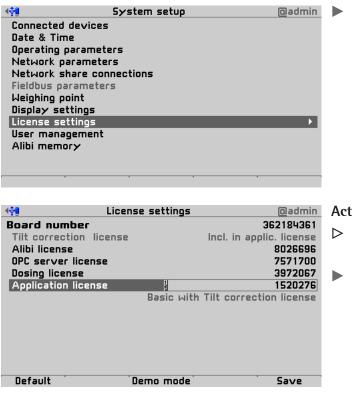

## 5.19.7 Display Settings

The brightness can be adjusted to suit lighting conditions here.

## 5.19.8 License Settings

Licenses for functions and application programs are activated under this menu item.

 Select and confirm [System setup] - [License settings] using the cursor.

#### Activating an Application License

- A selection/input window appears. The nine-digit board number is displayed.
- Enter the license number for the desired function/
- application as a seven-digit number using the keyboard.

Note	License numbers are delivered		
	with the device as a certificate		
	and are valid only for this		
	device/board number.		

▶ Press the [Save] soft key to save the entry.

#### Activating the Demo Mode

- Press the [Demo mode] soft key to operate the selected application in demo mode.
- $\triangleright$  A prompt window appears.
- ▶ Press the [Continue] soft key to start demo mode.

# 6 Extended Functions

# 6.1 System Maintenance

# 6.1.1 General Information

The following functions can be accessed via the [System maintenance] menu.

When user management is activated, the logged in user must have rights for the following:

- Complete system maintenance
- Importing (importing and restoring)
- Exporting (exporting and saving)

# 6.1.2 Saving to selected Media (Backup)

This function is required to back up the current configuration and/or device database to connected storage devices and/or network share connections.

This may be necessary for one of the following reasons:

- The current data is needed on another device.
- The configuration data is to be archived centrally.
- The configuration and/or database might be deleted accidentally.
- The configuration might be changed inadvertently.

The saved data can be restored later.

The backup stores the data sets in a format that can only be restored via the "Restore" function.

The backup can be saved:

- to the internal SD card,
- to a USB stick, or
- to the shared directories on the network.

**Note** If ,EXIT' key is pressed during backup stored data is deleted.

System maintenance       @admin         Backup       >         Restore       Export         Import       Alibi memory maintenance         SD card maintenance       SD card maintenance         Create service report       Shutdown & Power off         Update software       Factory reset         Test hardware	Select and confi [Backup].	rm [System maintenance]-

# 6.1.4 Exporting to selected Media

This function is required to export device data to external storage media (e.g. processing of data base tables).

**Note** Only data saved on the device using the [Save] soft key is exported.

Exported data is saved in XML format. These files can then be opened in an editor (e.g. Windows Notepad) for closer inspection, or to apply an import filter for XML processing software.

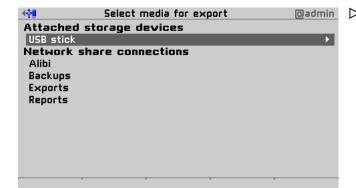

#### Examples

- Exporting all settings and compiling the host names assigned for the network settings to generate a list of device names.
- Exporting all calibration data to generate a report for all weighing points in the system.
- Exporting the database to generate statistics from the REPORT table for the batching software.
- Exporting the alibi memory to archive alibi entries for long-term storage.

Note	The export data is stored to external storage media in the following folder:			
	/pr5500/hostname/YYYYMMDDHHMMSS/			
Where:				
Hostname = device name from the network settings				
	YYYYMMDDHHMMSS = time of the export

# 6.1.5 Importing Data from External Media

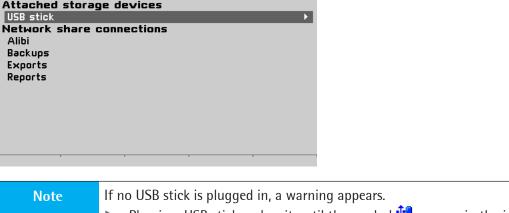

This function is required to import the exported data (or e.g. database tables generated by the PC) on device. Data to be imported must be in XML format. The format must be the same as that of exporting. The data can be created manually (using e.g. Windows Notepad) or via software export with known format.

#### Examples

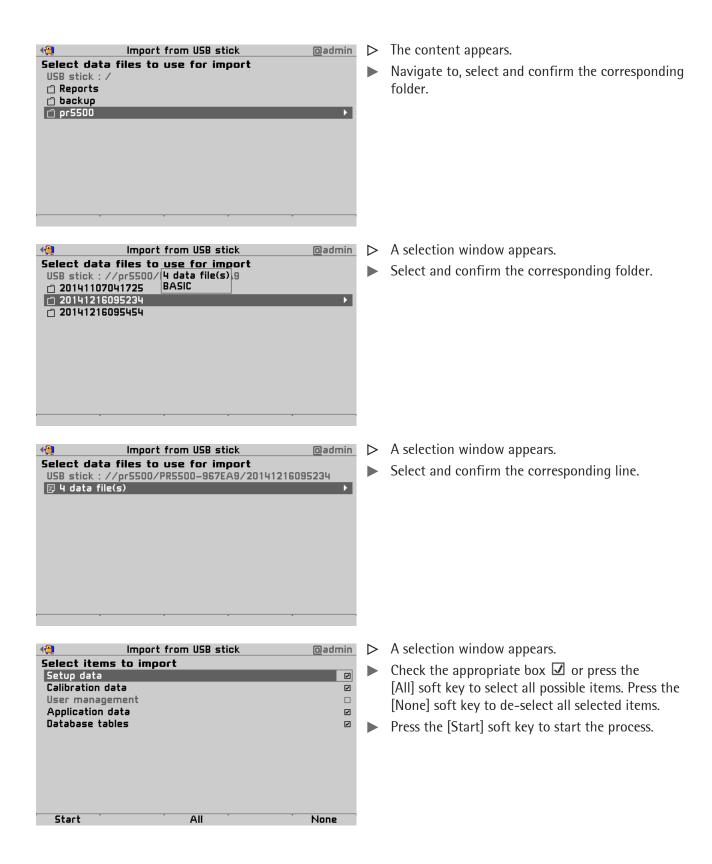

- Creating operating parameters to make the parameters for all devices available in the system.
- Providing data for user management to ensure the same access rights for all devices.
- Providing a new tare table every day for the BASIC application.

Important	During the importing process, only data present in the data set being imported will be overwritten.						
	<ul> <li>The following applies:</li> <li>Importing the setup data will only replace the settings present in the data set. For example, if the data set only contains operating parameters, the other settings will remain unchanged.</li> </ul>						
	<ul> <li>Importing the calibration data will only replace the calibration values present in the data set.</li> </ul>						
	- Importing the user management data will only replace the settings present in the data set. For example, if the data set only contains new users, the existing users will remain unchanged.						
	- Importing the application data will only replace the settings present in the data set. For example, if the data set only contains print parameters, the other settings will remain unchanged.						
	- Importing the database tables will only replace the tables present in the data set. If the data set contains the tare table only, the text table will remain unchanged in the device; the tare table will be overwritten completely however.

- The service report file (PR5500-servicereportdevicename-date + generated number.xml) is saved to the "Service reports" folder on the storage media (here: USB stick).
- As soon as the process is complete, an info window appears.
- Press the [OK] soft key to return to the [System maintenance] menu.
- Remove the USB stick from the device and insert in a PC to send the file to customer service via e-mail.

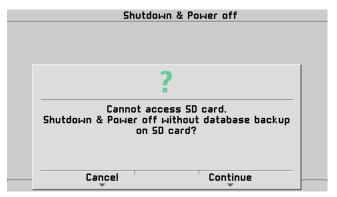

## 6.1.9 Switching Off the Device

This function is required to disconnect the device from the power immediately, e.g., to install an option card. Before switching off, all data are stored on the SD card and automatically restored again after switching on.

- The battery will be deactivated immediately.
- The application will be closed.

## 6.1.10 Updating the Software

#### 6.1.10.1 General Information

This function is required to install up-to-date software on the device.

The following options are available:

There are two ways to update the software:

- via soft key (one click software update)
- via menu

## 6.1.10.2 One Click Software Update

This function can be used if new software versions from a department are provided on the company's central network and these should be easily installed by an authorized operator.

To execute the software update via soft key, the following requirements must be met:

- Network share connection ,ONECLICKUPDATE' is created under [System setup] – [Network share connections].
- The files, if they exist, must have the following names:
  - pr5500-r01-bios.bin
  - pr5500-r01-firm.bin
  - pr5500-appl.bin
  - pr5500-labl.bin (optional)
- The parameter [W&M] must be set to ,none'.
- The parameter ,Settings locked' is deactivated.
- The CAL switches are open.

- If no SD card is inserted or the SD card is not detected, a prompt window will appear.
- Press the [Cancel] soft key to avoid data loss.
- Insert the SD card and confirm the line [Shutdown & Power off].
- ▷ A prompt window appears.
- Press the [Continue] soft key.
- Disconnect the power plug.

10× Res.	Analog test	

- $\triangleright$  A selection window appears.
- Select the desired card and confirm.

 $\triangleright$  An info window appears.

[Gross], [Net], [Tare] Display the current values.

## [Zero correction]

Displays the zero set range already used.

#### [InputVoltage]

The displayed value x input voltage (e.g., 12 V) gives the value to be measured; see Chapter 4.4.4.6.

#### [Dead load voltage]

Displays the value calibrated for the dead load.

- ▶ Press the [Analog test] soft key.
- $\triangleright$  An info window appears.
- Press the [10x Res.] soft key if necessary to display the weight value in an increased resolution (10-fold).

Press the soft key again to switch off the increased resolution (10-fold).

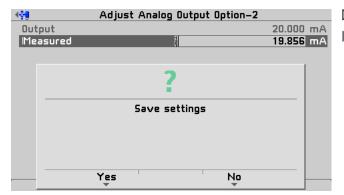

Press the ESC/EXIT key to return to the card test menu.

## Adapting the Analog Output: PR 5500/07

The output current can be adjusted in small ranges. This is required, if small deviations from the nominal value occur in a connected PLC.

	Test I/O-Cards		<ul> <li>A selection window appears.</li> </ul>

#### Service level

#### 6.1.13.1 Displaying Weighing Points in a Table

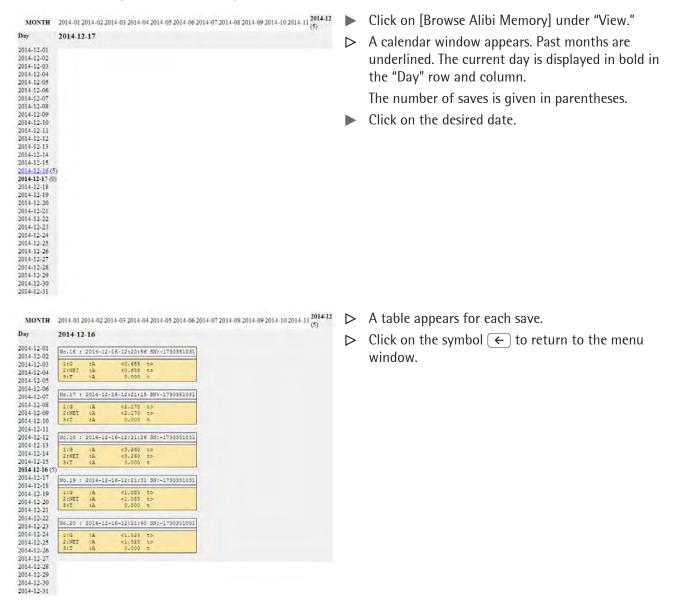

- Click on [Weighing Points] under "View."
- $\triangleright$  A status window with weighing point appears.
- ► Click on the symbol ← to return to the menu window.
- Click on [Weighing Points Pop-up Window] under "View."
- A status window with weighing point appears in a separate window.
- ► Click on the symbol ⊠ to return to the menu window.

#### 6.1.13.2 Displaying the Application-specific Database

- Click on [Browse Database] under "View."
- ▷ A table appears. Click on the entries in the table to display the corresponding content.
- $\blacktriangleright$  Click on the symbol  $\overleftarrow{\leftarrow}$  to return to the menu window.

#### 6.1.13.3 Browsing the Alibi Memory

#### 6.1.13.4 Displaying Manuals

- Click on [Manuals] under "View."
- ▷ Several files are listed. Click on a file to view its contents.
- Click on the symbol  $\leftarrow$  to return to the menu window.

#### 6.1.13.5 Browsing the Event Log

The log is a table showing the individual events on the device. This log can be used to analyze any possible problems.

The three event types are:

- Error \_
- Info
- Warning \_

The four source types are:

- [Fatal error] \_
- [Setup] \_
- [Power system] \_
- [Indicator]
- Click on [Browse Eventlog] under "Service level."
- ▷ The "Eventlogger" window opens.

#### Eventlogger

To refresh the event view press Refresh reading the events. If you do not want to show all events press Stop reading the events. There are 3 different types of events (Error, Info, Warning) and 4 different sources (Fatalerror, Setup, Powersystem, Indicator).

Refresh reading the events

Stop reading the events

Show 10 💌 entries				Search:

Showing 1 to 10 of 271 entries				First Previous 1 2 3 4 5 Next Last

 $\blacktriangleright$  Click on the symbol  $\overleftarrow{\leftarrow}$  to return to the menu window.

#### 6.1.13.6 Browsing Log Files

Log files can be used to analyze any possible problems.

- Click on [Browse logfiles] under "Service level."
- ▷ Several files are listed. Click on a file to view its contents.
- Click on the symbol  $(\leftarrow)$  to return to the menu window.

## 6.1.13.7 Displaying a Log of the Last System Error

Logs can be used to analyze any possible problems.

Note	This data can also be found in the servi	ice r	report.
PC=C0004102 D0=02CFA0C0 D1=000000CC D2=00000002 D3=00000000 D4=00000000 D5=41296500 D6=00000000 D7=00000000 C00040F2:202 C00040F6:254 C00040FE:206 C0004102>4C6A C0004108:240	\$014): Reserved FRM=4014 SR=2000 A0=0000003A SP+00=8000766C A1=41FCAF3A SP+04=8000762B A2=80000B7C SP+08=000491F0 A3=00000006 SP+12=0000005 A4=0000066 SP+16=00004552 A5=412C16F4 SP+20=41296500 A6=800076F0 SP+24=80000EF6 A7=800075AC SP+28=8000766C 2F0010 MOVE.L \$0010(A7),D0 400020 MOVE.L D0,\$0020(A2) 10800 MULS.L D1,D0 5A0028 MOVEA.L \$0028(A2),A0 0000001C DIVU.L \$001C(A2),D0		Click on [Show last fatal system error] under "Service level." The last saved system error appears. Click on the symbol ← to return to the menu window.

#### 6.1.13.8 Saving a Device Screenshot

- Switch to the desired display (in this case, weighing).
- Click on [Screenshot] in the WEB menu under "Service level."
- The device display is shown on the notebook/ screen.
- Right-click on the display and save to the desired folder via the "Save image as..." option.
- Click on the symbol  $\overleftarrow{\leftarrow}$  to return to the menu window.

#### 6.1.13.9 Exporting a Database

This function allows a database to be exported as an XML file to a selected folder.

- ▶ Click on [Export database] under "Service level."
- $\triangleright$  An input window may appear.
- ▶ Enter and confirm the user name and password if necessary.
- $\triangleright$  The file download window of the internet browser appears.
- ► Click [Save].
- Select a folder to store the XML file.
- ► Click [Save].

#### 6.1.13.10 Exporting the Alibi Memory

This function allows the Alibi memory to be exported as an XML file to a selected folder.

Example: "Internet Explorer"

- Click on [Export Alibi memory] under "Service level."
- $\triangleright$  An input window may appear.
- Enter and confirm the user name and password if necessary.

Select alibi records to export. First record is #16. Last record is #20.

First sequencenumber (1620)	16	•
Last sequencenumber (1620)	20	•
Start export		

- $\triangleright$  A page for selecting export alibi entries appears.
- ► Enter the desired range of data records (in this case, 1–51) and click [Start export].
- ▷ The file download window of the internet browser appears.
- Click [Save].
- ▶ Select a folder to store the XML file.
- ► Click [Save].
- ► Click on the symbol ← to return to the menu window.

#### 6.1.13.11 Exporting the Service Report

This function allows the service report to be exported as an XML file to a selected folder. If an error occurs, this file can be sent to customer service.

Example: "Internet Explorer"

- Click on [Export service report] under "Service level."
- ▷ An input window may appear.
- Enter and confirm the user name and password if necessary.
- ▷ The file download window of the internet browser appears.
- Click [Save].
- Select a folder to store the XML file.
- Click [Save].

#### 6.1.13.12 Backing Up and Restoring Setup Data

This function makes it possible to:

- create a backup with setup, user, calibration, and application data on the PC.
- restore the setup, user, calibration, and application data on the device.

**Note** This function cannot be used to back up the databases on the PC and restore them in the instrument. This is possible only under [System Maintenance] in the system menu.

- Click on [Backup and restore setup data] under "Service level."
- $\triangleright$  An input window may appear.
- Enter and confirm the user name and password if necessary.

## [Restore]

#### PR5500 Maxxis 4 (PR5500-967EA9)

Backup

Press Dackup to copy all configuration data from "PR5500-967EA9" to your local pc Restore

Select a .xml-File Datei auswählen setup-PRS5...93913.xml

Press Restore to save all configuration data to "PR5500-967EA9"

#### [Backup]

- ▷ The backup and restore menu appears.
- Click on [Backup] to create a backup.

Example: "Internet Explorer"

- Click the tab of the created file.
- $\triangleright$  The XML file is opened.
- ► Save the XML file under [File] [Save as...] in a selected folder.
- Select [Save].
- $\triangleright$  The backup is saved to the selected folder.
- Close the XML file under [File] [Close].
- Click on [Browse] to select an XML file to be restored.

Example: "Internet Explorer"

- The file upload window of the internet browser appears.
- Select the XML file (e.g., setup-PR5500-967EA9-20141218-093913.xml).
- Select [Open].
- ▷ The file name is displayed in the selection window.
- ► Click on [Restore].
- ▷ The setup data is saved to the device.

#### Possible Error Messages

	×	The displayed message appears when the user is not logged off.
Device is in use! Please log out and try again.		
	ОК	
	×	The displayed message appears when the CAL switch is closed and/or "Settings locked" is active.
Cal-Jumper closed or settings locked.		
	ОК	

#### 6.1.13.13 Loading Language Files

This function allows language files to be loaded.

Note	This function allows translations to be tested during development. The files are not
	permanently saved and are lost when the next cold start occurs. To permanently save the
	files, the language files must be loaded onto the instrument together with the application via
	"Update software".

# PR5500-967EA9

## Upload language file

- 1. Select .mo-file with translated strings
- 2. Do submit file to device
- 3. Select language in Setup/Software parameter

.mo-File	Datei auswählen	Keine ausgewählt
Upload		

- Click on [Upload Language Files] under "Service level".
- $\triangleright$  A selection window appears.
- Click on [Browse], select the desired mo files, and click [Upload] to load the files onto the device.
- ► Click on the symbol ← to return to the menu window.

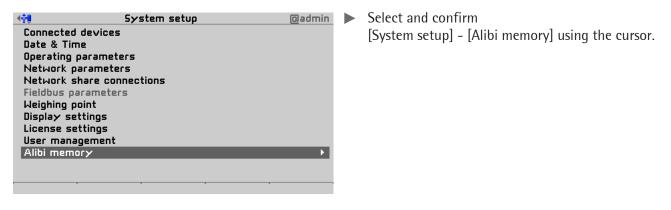

## 6.2 Alibi Memory

#### 6.2.1 General Information

Note	A license is required for this function; see Chapter 5.19.8.
	If CAL switch 1 is closed or if the parameters ,W&M' and ,Settings locked' are set for a weighing point, the alibi memory cannot be deleted and the settings are not changed.
	The alibi memory must be set before verifying the weighing points!

### 6.2.2 Erasing the Alibi Memory

This function is required to automatically overwrite individual data sets or manually delete the entire Alibi memory.

#### 6.2.2.1 Overwriting Data Records Automatically

	5	,		
- <b>(</b>	Alibi memory	Qadmin	$\triangleright$	A selection window appears.
Tidy up records	•	enabled		Confirm the selection.

Press the ESC/EXIT key to return to the previous window.

# **6.2.4 Exporting and Printing Alibi Data Records** See Chapter 6.1.6.

### 6.3 BIOS Menu

#### 6.3.1 General Information

If the device cannot carry out a normal system start, the BIOS menu must be used.

**Note** The BIOS menu is in English, regardless of the selected language settings.

#### Requirements

- The supply voltage is disconnected.
- All LEDs have gone out.

If this is not the case, the connection to the standby battery must be interrupted with the power supply disconnected (pull the plug out carefully). Restore the connection afterwards.

**Note** The battery is located below the weighing electronics board WP-A.

#### 6.3.2 Accessing the BIOS Menu

B Select device boot Warmstart Coldstart Recover	IOS BOOT MENU mode (continue from powerfail) ► (reset application) (fix unbootable system)		<ul> <li>Release the STOP key.</li> </ul>				
			<b>OK</b> to confirm the selection. up in the same way it does after				
			Note	This menu item is locked if a warm start is not possible. A warm start may not be possible for the following reasons: - Fatal system error - Faulty battery			
B	IOS BOOT MENU	[Co	oldstart]				
Select device boot Warmstart	(continue from powerfail)		Press the $\checkmark$ key t	to select the line.			
Coldstart Recover	(reset application) ► (fix unbootable system)			<b>OK</b> to confirm the selection.			
		$\triangleright$	The device starts, application resta	, the database is cleared, and the rts.			
			Note	If the device starts successfully, an existing database backup, if there is one, can be re-imported (see Chapter 6.1.3).			

BIOS BOOT MENU	[Recover]
Select device boot mode Warmstart (continue from powerfail)	$\blacktriangleright$ Press the $\checkmark$ key to select the line.
Coldstart (reset application) Recover (fix unbootable system) >	▶ Press the $\blacktriangleright$ key/ <b>OK</b> to confirm the selection.
	The overwrite protection statuses are checked (CAL switches and parameter ,Settings locked').
	This message appears if at least one CAL switch is closed.
CAL switch 1 is closed!	Open the CAL switch and press any key to check the statuses again.
Please open the cal switch and press any key. Press <b>EXIT</b> to cancel.	<ul> <li>Or</li> <li>Press the <b>EXIT</b> key to cancel the process and return to the BIOS menu.</li> </ul>
Settings are locked for W&M WP A.	This message appears if the ,W&M' parameter has been set to another value besides ,none' for at least one weighing point and ,Settings locked' has been activated.
Continuing will change the calibration check number 2046138865! Press <b>C, C, C</b> and then <b>OK</b> to clear W&M and settings locked. Press <b>EXIT</b> to cancel.	Press the C key three times and then press the OK key to reset the ,W&M' parameter and ,Settings locked'.
	$\triangleright$ The calibration check number changes.
	Or
	Press the <b>EXIT</b> key to cancel the process and return to the BIOS menu.

# 6.3.3 Troubleshooting Menu

-	
ERROR RECOVERY MENU Select error recovery option Restore last software from SD-Card	If all checks have been carried out, the troubleshooting menu appears.
Listen for FlashIt! Coldstart in safe mode	[Restore last software from SD-Card]

In the maintenance level you can - <b>Export a service report1</b> To record the faulty conditions for later inspection. - <b>IBackup settings1</b> Although setting were not loaded, you can make a backup for later review. - <b>IRestore settings1</b> Load settings from another backup to return the device to some wellknown settings. - <b>IFactory reset1</b> Permanently reset all settings to default.	<ul> <li>A help window appears.</li> <li>Press the <b>EXIT</b> key to close the help window and switch to the system maintenance menu.</li> </ul>

System maintenance (safe mode) Backup Restore Export Import Alibi memory maintenance SD card maintenance Create service report Shutdown & Power off Update software Factory reset Test hardware	<ul> <li>Press the ▼ key to select the desired menu item.</li> <li>Press the ► key/OK to confirm the selection.</li> <li>The rest of the procedure is described in Chapter 6.1.</li> <li>Press the EXIT key to exit the system maintenance menu.</li> </ul>
Operating         ?         Do a cold start to finish safe mode?         Cancel       Continue	<ul> <li>A prompt window appears.</li> <li>Press the [Cancel] soft key to select additional menu items in the system maintenance menu if necessary.</li> <li>Press the [Next] soft key to carry out a cold start.</li> </ul>

# 7 ModBus Protocol

# 7.1 General Description

The J-Bus/ModBus protocol implemented in the device permits fast, simple and reliable communication between a PC or a PLC.

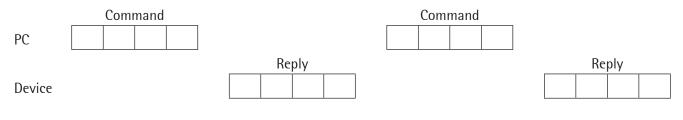

Device fully supports

- ModBus-RTU (via a serial interface), see Chapter 7.2
- ModBus-TCP (via a network interface), see Chapter 7.3
- ModBus-UDP (via a network interface), see Chapter 7.3

including functions 1, 2, 3, 4, 5, 6, 8 (sub-function 0), 15 and 16.

J-Bus is a French 'clone' of the ModBus. There is a small difference: J-Bus addresses count from 0 (instead of 1) to hex FFFF (instead of dec. 9999). Some ModBus masters automatically subtract 1 before sending a message, and some ModBus slaves subtract 1 to get the requested address. Therefore the address access may shift by 1; this is the only point which must be taken into account. In everyday practice, no other problems when connecting J-Bus and ModBus devices should appear.

Binary data from and to the SPM of device are transmitted using this protocol. Any data exchange includes two telegrams: a command from the PC to device and a reply from device to the PC.

A reply is sent to each error-free command.

If the received command is correct but cannot be executed nevertheless (e.g. due to a faulty address or faulty data), an error telegram is the reply.

### 7.2 ModBus-RTU

A serial interface is used for connection. The telegram consists of four blocks:

$Addr_8$	Func <sub>8</sub>	<data></data>	Crc <sub>16</sub>			
Legend						
Addr <sub>8</sub>	Slave devic	e address within a	a range of 0 or 1 to	) 247		
Func <sub>8</sub>	Function co	ode				
<data></data>	Additional	data (see Chapter				
Crc <sub>16</sub>	Checksum	of all preceding cl				
Note	A telegram these devic		executed by all M	odBus participa	nts, but replied	by none of

At 9600 baud, the reply time is typically 4 ms and a max. of 8 ms.

A faulty command received by device (e.g., parity error in the data, or CRC error) is ignored and no reply is sent. The pauses between the individual characters and a command must not exceed the 3.5-fold value of a character length; otherwise device detects a premature end of the command.

# 7.3 ModBus-TCP/UDP

Connection is via the network interface. The telegram consists of six blocks:

Trans <sub>16</sub>	Proto <sub>16</sub>	Size <sub>16</sub>	$Addr_{_8}$	Func <sub>8</sub>	<data></data>							
Legend												
Trans <sub>16</sub>		Sequential transaction number. This number is used by the device so that the reply can be assigned to the query.										
Proto <sub>16</sub>	Reserved for fut	Reserved for future upgrades, always 0 here.										
Size <sub>16</sub>	Number of follo	Number of following bytes										
Addr <sub>8</sub>	Normally, the de	vice address is not	used with ModBu	is-TCP/UDP.								
	It is used if Mod	Bus-TCP/UDP is co	nnected behind a	ModBusRTU gate	way.							
	The device ignores this parameter for ModBus-TCP/-UDP.											
Func <sub>8</sub>	Function code (s	ee Chapter 7.4)										
<data></data>	Additional data	(see Chapter 7.4)										

Telegrams can be exchanged using TCP or UPD via Port 502. Normally, this is a fixed setting in the ModBus-TCP master.

For UDP, the reply time is typically 4 ms and a max. of 8 ms. When network traffic is heavy, failed telegram transmissions must be expected. Suitable measures must be taken in the Modbus-UDP master to force a repeated transmission in the event of telegram loss.

With TCP, the typical response time is approx. 10 ms. With heavy network traffic, transmission can be delayed (max. 120 seconds for extreme network loads or for long transmission distances such as via the Internet). However, no telegrams are normally lost.

#### Comparison

ModBus-TCP	ModBus-UDP						
Reliable transmission:	Unreliable transmission:						
As long as the line is not interrupted, no telegram is lost.	With heavy network traffic or transmission over long distances, telegram loss must be expected.						
Low speed:	High speed:						
With transmission problems, transmission can be delayed considerably.	The reply is transmitted quickly, or not at all.						
Suitable for:	Suitable for:						
- Parameter transmission	- Transmission of dynamic values						
- Result logging	- Visualization						
- Non-time-critical process control	<ul> <li>Time-critical process control (requiring timeout handling)</li> </ul>						

### 7.4 Functions

#### Function 1 or 2: read n bits

Command	Function number	Address of 1st bit	Number of bits		
	1 byte	2 bytes	2 bytes		
Value range	1, 2	0, 8 , 16	8, 16, 24		

The bit address must always be the 1st bit of a byte. The number of bits to be read must not be smaller than 8 and must be a multiple of 8.

Reply	Function number	Number read. Bytes	Value of 1st byte	Value of 2nd byte	Value of last byte	
	1 byte	1 byte	1 byte	1 byte	 1 byte	-
			8th to 1st bit		Last bit	

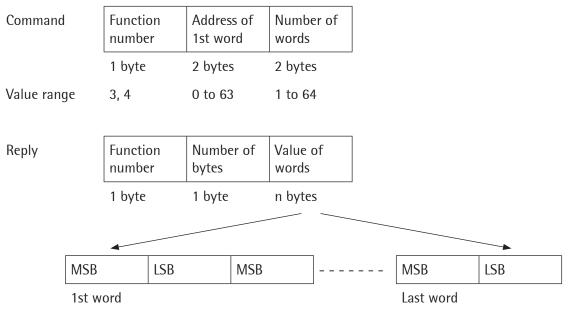

The number of bits is limited by the telegram to 2008 bits (251 bytes). If there are more than 2008 bits, then an error telegram is sent as a reply.

Example of function 1 for reading the status bits of the scale (8 bits start at bit 32) with ModBus-RTU.

Command	1	1	0	32	0	8	CRC	CRC				
Reply	1	1	1	Х	CRC	CRC						
Example with Mo	odBus-T	CP:										
Command	47	11	0	0	0	6	0	1	0	32	0	8
Reply	47	11	0	0	0	4	0	1	1	X		
The individual byt	tes are s	hown.										
The read byte X				Bit $0 = bit 32 \text{ of SPM} = ADC \text{ error}$								
is interpreted as	follows:	llows: Bit 1 = bit 33 of SPM			of SPM =	= above	Max (ma	iximum	capacity	/)		
						:						
				Bit 6 =	bit 38 c	of SPM =	= weight	is stable	2			

Bit 7 = bit 39 of SPM = weight is below zero or above Max

#### Function 3 or 4: read n successive words

If the address of one of the words to be read is out of the permissible range (0 to 16383), an error message is sent as a reply (the address plus the number of words must not exceed 16384).

The number of words is limited by the telegram to 125 words (250 bytes). If there are more than 125 words, then an error telegram is sent as a reply.

Example of function 3 for reading a gross weight (D8 = W16) of 893 kg with ModBus-RTU:

Command	1	3	0	16	0	2	CRC	CRC					
			<b></b>		1	1		1	-	1			
Reply	1	3	4	0	0	3	125	CRC	CRC				
Example with ModBu	is-TCP:												
Command	47	12	0	0	0	6	0	3	0	16	0	2	
Reply	47	12	0	0	0	7	0	3	4	0	0	3	125

The individual bytes are shown.

Command				Address of the bit			Valu	Value of the bit			ys 0			
	1 byte			2 by	ytes		1 by	te		1 byt	e			
Value range	5			0 tc	0 127		0 or	255		0				
Reply	Functio			Add bit	Iress of	the	Valu	e of	the bit	Alwa	ys 0			
	1 byte		l	2 by	ytes		1 by	te		1 byt	e			
Example of function	5 for s	etting bi	t 11	3 (t	aring) v	vith M	odBu	s-RT	U:					
Command	1	5	(	)	113	255	(	C	CRC	CRC				
									·		]			
Reply	1	5	(	)	113	255	(	)	CRC	CRC				
Example with ModB	us-TCP:													
Command	47	13	(	)	0	0	, (	6	0	5	0	113	255	0
					1	1					1	1		
Reply	47	13	(	)	0	0	(	6	0	5	0	113	255	
The individual bytes	are sho	wn.												
Function 6: Writing	g a Woi	rd												
Command	Functio	on numb	er	W	ord add	ress	V	alue	of the v	vord				
	1 byte			2	bytes		2	byte	es					
Value range	6			0	to 63									
Reply	Functio	on numb	er	W	ord add	ress	V	alue	of the v	word				

### Function 5: Writing a Bit

If the address is out of the permissible range (0...16383), an error message is sent as a reply.

2 bytes

2 bytes

1 byte

#### **Function 8: Diagnosis**

Reply

Command	Function number	Sub-function	Any value
	1 byte	2 bytes	2 bytes
Value range	8	0	

This function is intended for testing the communication.

Only sub-function 0 is supported.

The received command is sent as a reply.

Function number	Sub-function	Value of the command
1 byte	2 bytes	2 bytes

### Function 15: write n successive bits

Command	Function number	Address of 1st bit	Number of bits	Number of bytes	Value of bits
	1 byte	2 bytes	2 bytes	1 byte	n bytes
Value range	15	0 to 127	8, 16, 24	1, 2, 3	
	•				$\downarrow$
	1st Byte	2nd byte	3rd byte	]	Last byte
	8th to 1st bit				Last bit

8th to 1st bit

The bit address must always be the 1st bit of a byte. The number of bits to be read must not be smaller than 8 and must be a multiple of 8. The number of bits is limited by the telegram to 2008 bits (251 bytes). If there are more than 2008 bits, then an error telegram is sent as a reply.

 Function	Address of 1st	Number of
number	bit	bits
1 byte	2 bytes	

#### Example of function 15 with ModBus-RTU:

Command	1	15	0	64	0	8	1	3	CRC	CRC

Reply         1         15         0         64         0         8         CRC         CRC	
---	--

Example with ModBus-TCP:

Command	47	14	0	0	0	8	0	15	0	64	0	8	1	3
			1	1										
Reply	47	14	0	0	0	6	0	15	0	64	0	8		

The individual bytes are shown.

Command	Function number					Numbe bytes	Number of bytes		e of s
	1 byte	2 bytes		2 bytes		1 byte		n byt	es
Value range	16	0 to 63		1 to 64		2 to 12	8		
	4								- <b>\</b>
	MSB	LSB	MSI	В			MSB		LSB
	1st word						Last wo	ord	
Reply	Function number	Address of 1 word		Number o words	of				
	1 byte	2 bytes		2 bytes					

#### Function 16: write n successive words

If the address is out of the permissible range (0 to 16383), an error message is sent as a reply (the address plus the number of words must not exceed 16384).

The number of words is limited by the telegram to 125 words (250 bytes). If there are more than 125 words, then an error telegram is sent as a reply.

Example of function 16 for writing the limit\_1 switch-on point using value 893 with ModBus-RTU:

Command	1	16	0	48	0	2	4	0	0	3	125	CRC	CRC				
Reply	1	16	0	48	0	2	CRC	CRC									
Example wit	th Mo	dBus-1	ICP:														
Command	47	15	0	0	0	8	0	16	0	48	0	2	4	0	0	3	125
Reply	47	15	0	0	0	6	0	16	0	48	0	2					

The individual bytes are shown.

# 7.5 Error Messages

If a command was transmitted correctly, but cannot be executed because, e.g. the address is too high, an error message is sent as a reply to the command.

The error message has the following format:

Function number +128	Function number
1 byte	1 byte

The 2nd byte contains the received function number; the most significant bit is set additionally. Meaning of the error number:

1	The function number is unknown
2	The address is out of the permissible range
3	The data format is faulty (e.g. more data than specified in the number were written)

Example of an error message, which was generated by an invalid function number with ModBus-RTU.

Command	1	9	0	0	0	0	CRC	CRC		
						1				
Reply	1	137	1	CRC	CRC					
Example with ModB	us-TCP:									
Command	47	16	0	0	0	8	0	9	0	0

0

0

3

0

137

1

# 7.6 Word Addresses

16	Gross weight, 1st byte (MSB)				Gross weight, 2nd byte											
17	Gross	weigh	t, 3rd b	oyte					Gross	weigh	t, 4th b	oyte (LS	5B)			
2	39	38	37	36	35	34	33	32	47	46	45	44	43	42	41	40
							1						1	I		
7	119	118	117	116	115	114	113	112	127	126	125	124	123	122	121	120

Address	Meaning
Read bits:	
32	ADC error
33	Above Max (FSD)
34	Above Max + n d
35	Below zero (minus sign)
36	Zero within ¼ d
37	Within the zero setting range
38	The weight is stable
39	The weight is below zero or above Max
Write bits:	
112	Set zero
113	Set tare
114	Reset tare

For additional bits, see the operating instructions of the respective application.

# 8 EW Com Protocol

This function enables the use of the following commands.

No license is required for its use.

Note	These commands can still be used for existing systems if available PR 16xx devices are being
	replaced.
	These commands may not be used for new systems.

# 8.1 Weight Function Commands

These commands only support weighing points with a max. of 6 digits before and a max. of 3 digits after the decimal point.

Command	Reply	Description
WG{A B C D}	QG{A B C D}vwwwwwemz	Read gross weight
$WN{A B C D}$	QN{A B C D}vwwwwwemz	Read net weight
WT{A B C D}	QT{A B C D}vwwwwwemz	Read tare weight
		vwwwwwe = Weight with a +/- sign and exponent (e.g. '002340' = 002.34 g; 001005 = 100 kg) e = Exponent:
		'5' = XXXXX; '4' = XXXX.X; '3' = XXX.XX; '2' = XX.XXX m = '1' = stability
		v = +/- sign and can be '-' or ' '
		z = '1' = tared; '2' = test is active; '4' = in ¼ d
		Possible error messages:
		E100@0 general error for @ see Chapter 8.3
		E30000 BCC error
		E50000 analog test active
		E60000 weighing point unknown
WZ{A B C D}	0	Zero device
		Possible error messages:
		E100@0 general error for @ see Chapter 8.3
		E30000 BCC error
		E60000 weighing point unknown
		E70000 weighing point tared or no standstill
WS{A B C D}	Q	Tare
WS{A B C D}vwwwwwe	Q	Preset tare
		Possible error messages:
		E100@0 general error for @ see Chapter 8.3
		E30000 BCC error
		E60000 weighing point unknown
		E63000 preset tare >MAX
		E70000 weighing point tared or no standstill

Command	Reply	Description
$WF{A B C D}$	Q	Reset tare
		Possible error messages:
		E100@0 general error for @ see Chapter 8.3
		E60000 weighing point unknown
		E70000 weighing point tared or no standstill
	Qlwwwww ddssnnnn	d = Unit, variable (mg, g, kg, t, lb, oz)
		ss = Scale interval (01, 02, 05, 10, 20, 50)
		nnnnn = Span in mV/V (01234 corresponds to 0.1234 mV/V)

# 8.2 Other Commands

Command	Reply	Description
ZSDTTMMJJJJJssmm	QZSD	Set date and time Possible error messages: E20000 telegram too long E60000 telegram too short
ZSC	QZSC	Reset communication
V	QV5500/00-vv.vv.vv B: nnnnnnnn	Version query vv.vv.vv = Version number nnnnnnnn = Board number

# 8.3 SPM Commands

Command	Reply	Description
mrx <aa><aa></aa></aa>	qmrx<0q>	Read SPM bit
mrb <aa><aa></aa></aa>	qmrb <dd></dd>	Read SPM byte
mrw <aa><aa></aa></aa>	qmrw <dd><dd></dd></dd>	Read SPM word
mrd <aa><aa></aa></aa>	qmrd <dd<dd><dd></dd></dd<dd>	Read SPM double word
mrb <aa><aa><nn></nn></aa></aa>	qmrb <dd></dd>	Read SPM bytes
mrw <aa><aa><nn></nn></aa></aa>	qmrw <dd></dd>	Read SPM words
mrd <aa><aa><nn></nn></aa></aa>	qmrd <dd></dd>	Read SPM double words
Length 1 can be omitted.		
msx <aa><aa></aa></aa>	q	Set bit
mcx <aa><aa></aa></aa>	q	Clear bit
msb <aa><aa></aa></aa>	q	Set byte
mcb <aa><aa></aa></aa>	q	Clear byte
msw <aa><aa></aa></aa>	q	Set word
mcw <aa><aa></aa></aa>	q	Clear word
msd <aa><aa></aa></aa>	q	Set double word
mcd <aa><aa></aa></aa>	q	Clear double word
mwx <aa><aa>&lt;0q&gt;</aa></aa>	q	Write SPM bit
mwb <aa><aa><dd></dd></aa></aa>	q	Write SPM byte
mww <aa><aa><dd></dd></aa></aa>	q	Write SPM word
mwd <aa><aa><dd><dd><dd><dd></dd></dd></dd></dd></aa></aa>	q	Write SPM D word
mwb <aa><aa><nn><dd></dd></nn></aa></aa>	q	Write nn SPM bytes
mww <aa><aa><nn><dd><dd></dd></dd></nn></aa></aa>	q	Write nn SPM words
mwd <aa><aa><nn><dd><dd><dd><dd>&lt;</dd></dd></dd></dd></nn></aa></aa>	q	Write nn SPM D words

Length 1 can be omitted. An AND/OR function is also possible.

#### Legend

(<aa> a character in binary code)

m	Memory command, binary
r,w,a,o,s,c	Read, write, AND, OR, set, clear
x,b,w,d	Bit, byte, word, double word
q	Confirmation
<99><99>	Address (high byte, low byte)
<dd></dd>	Data byte
<nn></nn>	Number of data
<0q>	1 bit
<dd></dd>	Several data bytes
In case of error t	he renty is e-xx

In case of error, the reply is e<xx><yy><zz>, see also Chapter 8.4.

NoteThe addresses in these telegrams are binary.The addresses in the list in the Chapter 'Fieldbus Interfaces' in the corresponding Applikation<br/>Manual are decimal.

# 8.4 Error Messages for EW Com Commands

Errors	Description	Errors	Description
E20000	Error in telegram structure	E10010	Arithmetic overflow
E30000	BCC error	E10020	Overload
E40000	Hardware error messages	E10030	ADC hardware error
E50000	Analog test active	E10040	Weight > 5 digits
E60000	Wrong SPM address	E10050	No weight
E63000	Preset tare > MAX	E10060	No sense voltage
E70000	Tared weighing point or no stability	E10070	Mixed-up inputs

# 9 Repairs and Maintenance

Repairs are subject to inspection and must be carried out at Sartorius Intec. In case of defect or malfunction, please contact your local Sartorius Intec dealer or service center for repair. When returning the device for repair, please include a precise and complete description of the problem. Maintenance work may only be carried out by a trained technician with expert knowledge of the hazards involved and the required precautions.

### 9.1 Battery for Date/Time

The lithium battery for backing up the calendar/time chip is located on the main board.

The battery is activated before the instrument leaves the factory.

**Note** Check the date and time after first turning on the device and change if necessary.

#### **Replacing the Battery**

If the voltage drops below the specified minimum, or in case of defect, the battery must be replaced by Sartorius Intec customer service or by an equivalent trained technician. For details on disposal, see Chapter 10.

For details on battery lifetime, see Chapter 12.3.1.

If the battery needs to be changed, this is shown on the display.

### 9.2 Rechargeable Battery for Voltage Supply

This device contains an NiMH rechargeable battery. In the event of a power failure, the processor is supplied for approx. 1 min. in order to save the current state and shut down properly.

#### Changing the Rechargeable Battery

If the voltage drops below the specified minimum, or in case of defect, the battery must be replaced by Sartorius Intec customer service or by an equivalent trained technician. For details on disposal, see Chapter 10.

### 9.3 Solder Work

Soldering work on the instrument is neither required nor permitted.

# 9.4 Cleaning

	_	Prevent moisture from penetrating the interior.
	-	Do not use aggressive cleaning agents (solvents or similar).
<u>_•</u> _	-	For use in the food industry, use a cleaning agent suitable for that particular
⚠ Warning		working environment.
<b>,</b>	-	Spraying with water or blowing off with compressed air is not permissible.

- ▶ Disconnect the device from the power supply.
- ▶ Clean the device with a cloth lightly moistened with a soap solution.
- ▶ Wipe down the device with a soft, dry cloth after cleaning.

# 10 Disposal

If the packaging is no longer needed, it can be disposed of by local waste disposal authorities. The packaging is made from environmentally friendly materials, which are suitable for recycling.

For more information, please see the T&Cs.

In other countries, please consult with the local authorities.

# 11 Error Messages

# 11.1 Error Messages in Measuring Circuit

The weighing electronics can generate error messages, which are output on the weight display.

Display	Error and Possible Cause	Remote display
Arith. error	Internal arithmetic overflow: - incorrect calibration values due to incorrect calibration, for example	Error 1
Overload	Input voltage is higher than Max + (x d): - Wrong settings - Too much weight on the scale	Error 2
No signal	<ul> <li>Measuring input open:</li> <li>Input signal is higher than the permissible range of 36 mV.</li> <li>Measuring cable is interrupted (cable break detection)</li> <li>Other hardware defect</li> </ul>	Error 3
Value exceeds display	Measured value cannot be displayed. Example: 30,000 kg scale and weight unit toggle to mg. > 9,999,000 mg (= 9,999 kg) generates this error message.	Error 4
No sense voltage	No sense voltage: - Load cells not connected. - Sense line or supply line is interrupted. - Wrong polarity or sense voltage is low.	Error 6
Negative input	Negative input (< -0.1mV/V): - Wrong polarity of load cell signal. - Wrong polarity of supply voltage.	Error 7
No values from scale	<ul> <li>Internal weighing point: Input signal is higher than the permissible range of 36 mV. Cannot read weight values from ADC (analog-digital converter).</li> <li>Error in weighing electronics board</li> <li>Defective load cell</li> <li>Cable break</li> </ul>	Error 9
Test active	No gross weight value: - Test is not yet finished.	Error 10

Wrong serial number Only if CAL switch is closed.	<ul> <li>Weighing electronics board has been changed after calibration.</li> <li>Device is not calibrated.</li> </ul>	Error ?
Read config failed	<ul> <li>The stored configuration and calibration data are not read.</li> <li>Transfer data stored in backup device using [System maintenance]-[Restore]-[SD card] recreating data in process controller (see Chapter 6.1.3.1)</li> <li>Initially set weighing electronics (i.e. ,Internal weighing point') to ,not assigned', save and then assign.</li> </ul>	Error A
Warmup 123	Device in warm-up mode, approx. 30 s.	123
negative input negative	weight Indication range overload	
negatives Signal negatives (	ewicht Anzeigebereich Max Überlas	st

# 11.2 Error Messages with xBPI Scales

# 11.2.1 Error Messages

Display	Error and Possible Cause Remote		
Overload	Input voltage is higher than Max + (x d): - Wrong settings	Error 2	
	- Too much weight on the scale		
Value exceeds display	The weight value is not displayed:	Error 4	
	- Too many digits have been set		
No weight value	The xBPI scale is not providing any usable weights.	Error 5	
	- Taring process cannot be completed.		
Incompatible units	Incompatible mass units:	Error 8	
	- Wrong calibration values by e.g. incorrect calibration		
No values from scale	No communication with xBPI scale:	Error 9	
	- Cable break		
	- Internal scale error		
	- The scale is not connected to the supply voltage.		
Wrong configuration	- Tare disabled	Error 13	
	- Tare 2 not allowed		
	- Application tare is too high		
Scale not ready	The scale is not ready for weighing:	Error <	
	- The instrument is in the warm-up phase.		
	- The instrument is in automatic taring mode.		
	- The instrument was switched on with the scale loaded.		
Wrong serial number	Serial number of scale does not match the number set in the	Error ?	
-	device.		
Read config failed	The stored configuration and calibration data are not read.	Error A	
	<ul> <li>Transfer data stored in backup device using [System maintenance]-[Restore]-[SD card] recreating data in</li> </ul>		
	process controller (see Chapter 6.1.3.1).		
	- Initially set weighing electronics (i.e. ,Internal weighing		
	point') to ,not assigned', save and then assign.		

# 11.2.2 Error during "Set zero" and "Set tare"

An error occurs in the LOAD ERROR variable only with actions SET\_ZERO and SET\_TARE. Possible error numbers are:

IND_STS_OK=0,	//! "OK" ok, didit	
IND_STS_NO_WPT=1,	//! "no wpt" specified wpt does not exist	
IND_STS_WPT_IN_USE=2,	//! "in use" weighing point is in use

Display	Iay   Error and Possible Cause	
Overload	Input voltage is higher than Max + (x d): - Wrong settings - Too much weight on the scale	Error 2
Value exceeds display	The weight value is not displayed: - Too many digits have been set	Error 4
Incompatible units	Incompatible mass units: - Wrong calibration values by e.g. incorrect calibration	Error 8
No values from scale	No communication with Pendeo load cell: - Cable break - Internal scale error - The scale is not connected to the supply voltage.	Error 9
Wrong configuration	The number of load cells does not match with the configuration.	Error 13
Scale not ready	<ul> <li>The scale is not ready for weighing:</li> <li>Min. 1 load cell gives an error status or is defective (no communication).</li> </ul>	Error <
Wrong serial number	Serial number of load cell does not correspond to the number set in the device.	Error ?
Warmup 123	Load cells in warm-up mode, approx. 30 s. Error @	
Read config failed	<ul> <li>The stored configuration and calibration data are not read.</li> <li>Transfer data stored in backup device using [System maintenance]-[Restore]-[SD card] recreating data in process controller (see Chapter 6.1.3.1).</li> <li>Initially set weighing electronics (i.e. ,Internal weighing point') to ,not assigned', save and then assign.</li> </ul>	Error A

# 11.4 Error messages with PR-Net Weighing Point

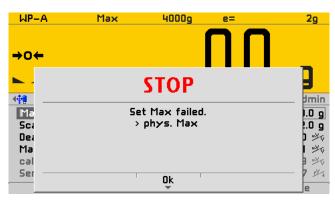

Display	Error and Possible Cause	Remote display
Wrong configuration	No IP address or no host name available.	Error 13

# 11.5 Error messages with Type ,Mettler-Scale' Weighing Point

Display	Error and Possible Cause	Remote display
Arith. error	Internal arithmetic overflow: - Parameter/calibration values don't match with Mettler-Scale values.	Error 1

### 11.6 Error Messages during Calibration

### 11.6.1 Determining the Maximum Capacity (MAX)

The maximum capacity of the scale can be increased retroactively.

This message appears when the measurement signal for the given maximum capacity would exceed the permissible input voltage.

The maximum capacity of the scale can be increased retroactively. When the capacity is reduced, however, a message appears when the new maximum capacity falls below the calibration weight ("calibrated at").

WP-A	Max	4000g	e=	2g
			пп

Ma Sca	n	ot enough d		2.0 g
Dea				ע≪ נ
Ma				I ≫⊻⊽
cal				₿ ≫¥∿
Ser —	T	Ok		

This message appears if the selected resolution is too low, e.g. 5 kg.

This message appears when the selected resolution is so high that less than 0.8 internal counts per scale interval (d) are available.

Max	4000g	e=	29
	1

Max

This message appears if the maximum capacity [Max] of the scale range (weighing range) is not an integer multiple of the scale interval (1 d).

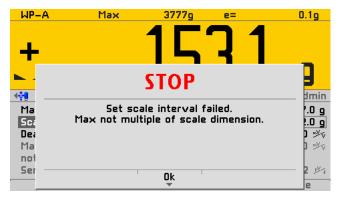

Weight units do not match, e.g. subsequent change of [Max] from kg to mg.

WP-A	Max	4500g	e=	<b>5</b> 9

This message appears if the selected resolution is so high that less than 0.8  $\mu$ V/e are available when "OIML/ NSC" has been selected.

After [OK] is pressed, the input value for the maximum capacity [Max] is canceled.

#### **11.6.2** Determining the Scale Interval

This message appears if the maximum capacity [Max] of the scale range is not an integer multiple of the scale interval.

#### 11.6.3 Determining the Dead Load

The dead load entered in mV/V plus maximum capacity in mV/V is higher than 3 mV/V (= 36 mV).

This message appears when the scale is not stable.

#### Remedy

- Check the mechanical function of the scale.
- Adapt the filter setting; reduce the resolution.
- Adapt the stability conditions.

This message appears if the measurement signal is negative (load cells connected with wrong polarity or defective) when determining the dead load with [by load].

#### Cause

Load cell connected with wrong polarity, or defective, or mechanical problem of the scale.

This message appears if the dead load entered in mV/V is higher than 5 mV/V.

### 11.6.4 Calibrating with Weight

Δ

This message appears when the scale interval is too small, if ,W&M' has been selected. Remedy:

Enter larger scale interval.

This message appears when the scale is not stable. Remedy:

- ▶ Check the mechanical function of the scale.
- Adapt the filter setting; reduce the resolution.
- Adapt the stability conditions.

This message appears if the load has been removed from the scale rather than added.

This message appears when an attempt is made to calibrate the scale using a weight that is heavier than the [Max].

# **12 Specifications**

### 12.1 Note on Using 'Free Software'

This device also contains "free software" in the firmware that is licensed under the GNU General Public License (GPL) Version 2, June 1991, and the GNU Lesser General Public License (LGPL) Version 2.1, February 1999. This device also contains "free software" from MIT and BSD.

This 'free software' was developed by third parties, is copyrighted, and is provided free of charge.

The license terms and conditions of Free Software Foundation, Inc in English are included in the delivery of the instrument.

The source text with the terms can be found on the enclosed CD-ROM.

### 12.2 Decoding the Serial Number

30 252 00015		
30	274	00015
Location no.: 30 = Hamburg	Code for the year/month: 274* = February 2012	Current number

\* will count up according to the year group table of Sartorius

### 12.3 General Data

The following characteristics are valid after a warm-up time of at least 60 minutes (reference temperature: 23°C).

#### 12.3.1 Battery for Date/Time

The lithium battery for backing up the date/time chip is activated before the instrument leaves the factory.

Lifespan	Device continuously connected to mains voltage	10 years
	Device not connected to mains voltage for some time (e.g. in storage)	7 years

### 12.3.2 Rechargeable Battery for Voltage Supply

The NiMH rechargeable battery continues to supply the processor for approx. 1 minute after a power failure has occurred, in order to save the current status of the device. The temperature of the rechargeable battery is monitored and can be displayed.

#### 12.3.3 Display

Туре	Size	Resolution
TFT graphical color display	4.3"	480 x 272 pixels

#### 12.3.4 Power Connection 230 V AC

Supply voltage	100 V-240 V AC	+10%/-15%	50/60 Hz
Max. power consumption	14 W/32 VA		
Primary fuse	2x 1 AT, 250 V, 5 x 20 mm; Littlefuse series 218, order no. 0218.0	01.P	

### 12.3.5 Power Connection 24 V DC

Supply voltage	24 V DC	±10%	
Max. power consumption	1 W		
Primary fuse	1x 2 AT, 250 V, 5 x 20 mm e.g. made by Schurter: SPT5>	20. order no : 0001 2507	

# **12.4 Effect of Ambient Conditions**

#### 12.4.1 Ambient Conditions

Temperature range				
	Ambient temperature for operation	-10 to +50°C		
	Ambient temperature for use in legal metrology	-10 to +40°C		
	Power-on temperature	> 0°C		
	Storage/transport	-20 to +70°C		
Moistur	e	< 95%, no condensation (in accordance with IEC 68-2)		
Protection class		IP65 front, IP20 rear		
Elevation		< 2000 m		

### 12.4.2 Electromagnetic Compatibility (EMC)

All data in compliance with NAMUR NE 21, EN 45501, and EN 61326.

Housing	Radio frequency electromagnetic fields (80-3000 MHz)	EN 61000-4-3	10 V/m
	Electrostatic discharge (ESD)	EN 61000-4-2	6/8 kV
Signal und	Fast transients (bursts)	EN 61000-4-4	1 kV
control lines	Peak voltages (surges) 1.2/50 μs	EN 61000-4-5	1/2 kV
	Conducted disturbances by radio frequency (0.15-80 MHz)	EN 61000-4-6	10 V
Mains inputs	Fast transients (bursts)	EN 61000-4-4	2 kV
	Peak voltages (surges) 1.2/50 µs	EN 61000-4-5	1/2 kV
	Conducted disturbances by radio frequency (0.15-80 MHz)	EN 61000-4-6	10 V
	Voltage dips	EN 61000-4-11	0/40/70% 20/200/500 ms
	Mains failure link	EN 61000-4-11	20 ms

#### 12.4.3 RF Interference Suppression

Electromagnetic emission

EN 55011, Group 1, Class A For industrial areas

### 12.5 Mechanics

#### 12.5.1 Design

Control cabinet housing made of stainless steel and aluminum, protection class IP65, rear IP20.

#### 12.5.2 Dimensions

Width	186/192/199 mm
Height	90/96/103 mm
Depth	approx. 203 mm (incl. screen clamping rail)
12.5.3 Weights	
Net weight	2.2 kg

### 12.6 Documentation on the Enclosed CD

The enclosed CD has a directory containing the following documents:

- Eu Declaration of Conformity
- Manuals

# 13.4 LEDs

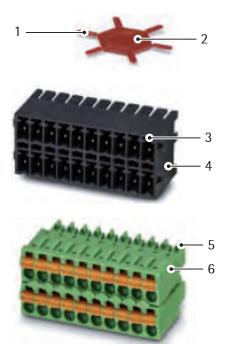

LED	Function	LED	Function
1	ADC supply voltage +9 V	6	3.3 V
2	ADC supply voltage -9 V	7	Main supply voltage 24 V
3	5 V	8	5 V buffered
4	300 mA rechargeable battery current, illuminates when charging	9	3.3 VCC buffered
5	60 mA rechargeable battery current, illuminates when charging	10	USB supply (not shown) The LED is positioned below the carrier card for the option cards.

# 13.5 Terminal Coding

The combinatorics defined during the order process are used to encode the corresponding connectors before their delivery. The connectors only need to be encoded subsequently if plug-in cards are supplied after the original delivery.

The coding position for the individual cards is described in Chapter 4.4.

#### Procedure

- ▶ Remove terminal (6) from terminal block (4).
- ▶ Disconnect coding pin (1) from coding profile (2).
- Insert coding pin (1) into the corresponding slot (3) of terminal block (4).
- Remove (pinch off) coding ridge (5) on terminal (6).
- Re-insert terminal (6) into terminal block (4).

# 13.6 Exchanging the Plug-In Cards

### **13.6.1** Safety Information

 Before a plug-in card is inserted/removed, it is essential that

 the device is shut down properly (menu [Operation]-[System maintenance]-[Shutdown & Power off]).

 the device is disconnected from any power sources.

 all LEDs have gone out.

13.6.2 Optional and Fieldbus Cards

Note

If an option card has to be replaced by a fieldbus, the carrier plate (1) must be reversed!

- ▶ Insert all plugs again and switch on the device.
- ▷ Once the plug-in cards are replaced the device will detect them automatically.

Note The installed plug-in cards can be displayed under [Operation]-[System information]-[Show HW options].

### 13.7 Replacing the Device

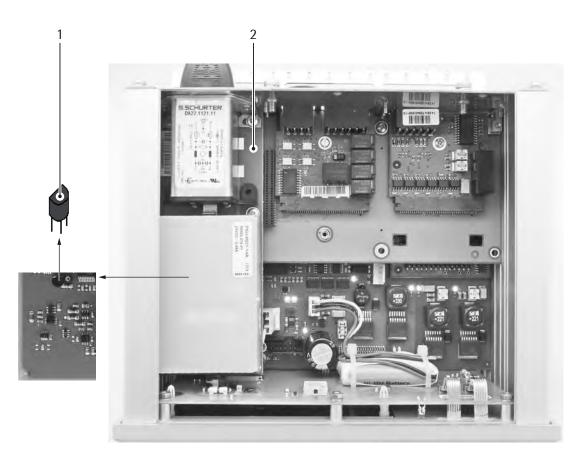

When replacing a faulty device, the data on the faulty device can be completely imported into the new device by plugging the SC card of the old device into the new device.

Settings and database can restored from the SD card (backup), see Chapter 6.1.3.1.

If the licenses (including board number) are also transferred to the new device, the SIL chip of the old device must also be connected to the new device.

$\underline{\land}$	<ul> <li>Before a component is inserted/removed, it is essential that</li> <li>the device is shut down properly (menu [Operation]-[System maintenance]-</li> <li>[Shutdown &amp; Power off]).</li> </ul>
⚠ Warning	<ul> <li>the device is disconnected from any power sources.</li> <li>all LEDs have gone out.</li> </ul>

- Dismount the complete carrier plate (2).
- Remove the SIL chip (1) and SD card from the faulty device and insert in the replacement device.
- Switch on the device.
- Press the STOP and EXIT keys at the same time to trigger a cold start (for presets see Chapter 5.19.3).

- $\triangleright$  A selection window appears.
- Select and confirm the menu item [Use SD card to update the software].
- ▷ The device installs the BIOS, firmware, and application from the SD card.
- A prompt window appears if no database file is found in the folder.
- Press the [Yes] soft key to restore the database from the faulty device in the replacement device.
- Transfer additional settings; see Chapter 6.1.3.1.

### 13.8 Replacing the SD Card

Note

Only Sartorius-supplied SD cards may be used. There is no warranty for third-party cards.

Use SD card to update the software					

- Export the data from the device onto a USB stick, see Chapter 6.1.4.1.
- Remove the defective SD card.
- ▶ Insert the new SD card.
- Only if the new card has already been used in another device: Press the STOP and EXIT keys at the same time to trigger a cold start.
- Only if the new card has already been used in another device: Select and confirm the menu item [Use SD card without updating software].
- Import the data from the USB stick into the device, see Chapter 6.1.5.1.
